Tell me what percentage of 'freebanders' you think are not running illegal power. Since they are not authorized to use those frequencies, any power they run there is illegal. In my book, that would be 100%, no survey needed. What are you talking out of?

It certainly a lot more than you have achieved. Oh, I suppose you
call operating illegally on the 'freeband' a great achievement.

1457. Re: antenna in attic

Newsgroup: rec.radio.cb
Date: 2002-10-15 21:45:16 UTC
From: 'Doc <w5lz@cwis.net>
Message-ID: <3DAC8C6C.B731E5C0@cwis.net>
Source record: 140234

spj67,
How well an antenna in the attic works depends on
what is in the attic with the antenna. Any A/C ducting,
electrical wiring, metal backed insulation, etc, will
have some adverse affect on the antenna. How 'much' is
anyones guess, but there will always be 'some'.
Maybe the most noticable affect will be the interference
to other electronics in your house. Since the antenna is
closer to the wiring, etc, there will be more affect than
if the antenna was outside, further away from your house.
Unless you have a pretty 'tall' attic, you'll have to use
a mobile antenna (shorter), or lay a 'base' antenna on it's
side. Either will work, but maybe not the 'best' in the
world. Probably about what you're seeing with your present
antenna?
There are a number of alternatives, from putting an antenna
on a pole outside, to building an antenna and 'making' it work.
It sort of depends on how 'bad' you want to do it. Since each
installation is different, no one can really tell you how well
an attic antenna will work for you, or how it will compare with
what you're using now. The only 'real' way to find out is to
try it and see.
Good luck...
'Doc

You claimed "I" said it was illegal when in fact I didn't. You're right,
we understand each other and agree (did I say that?) on the law there.
The law concerning the school zone surprised me. Some states have
mandtory minimums for that and any possession is a felony (within "X'
amount of distance from a school).

Yes some states are still very harsh, I checked some states local to me Ohio
was very lenient while NJ was out right scary don't get busted there they
will take your first born.

>Only in very beginning, long before you were ever on this newsgroup, I "borrowed" an account from a local university. That was back around 1995 or 96, before i had my own ISP. Ever since then I have ALWAYS used this account that you see here. I have never used a deliberate phoney account for the purposes of deceiving anyone, or projecting an image that I would be ashamed of under my real name.
You see, the one thing that sets me apart from many of your other detractors, <<

Again, you and Frank and Lelnad and Dogie are not many. Toss in the occasional hammie you guys run to for support, and you still don't have 'many". Ha! It must kill you that I get along so well with cbers AND hammies otherwise you wouldn't be making such a stink and holding my leg with your muddy paws.

>is that I'm not afraid to stand behind my words, <<

Right. You deny them, then must be taken by the hand and shown you indeed made the remarks, then claim you forgot.
We can read, Dave. This underestimation of cbers you hold has embarrassed you many times. There will be more....

>no matter how many times you twist, distort or take them out of context. <<

More lies. I presented your text unedited and untouched.
The only distortion about it came from your palty failed attempts at defending yourself and blaming me for things that I never did.

>I don't have to hide behind a phoney name to call attention to your comprehensive deficiencies. I'll do it straight up right here and now.
Dave
"Sandbagger"
<<

You sound angry. If the above is true, then show me where I "keeps" misquoting someone "right here and now". In your own words...."Put up or shut up."...but I don't like that type talk....it's much more digestible coming from trashy lying types such as yourself. Dave, you hurt hammie radio more than you will ever realize.

1465. Re: Re...Do HAMS use more than 1500 watts ?

Newsgroup: rec.radio.cb

Message-ID: <aoi3nd$50r$1@woodrow.ucdavis.edu>
Source record: 140242

: Aaron H. Voobner <ahvoobner@yahoo.com> wrote:

Stand by for a load of candy coated poop from the guy using the fake Aaron Voobner name.

: If you poll the average citizen about human nature they will say that
: the vast majority of people are basically honest. But when you ask the
: small minority of people who are criminals the same question, they
: will swear that the majority of people are dishonest. Funny how that
: works.

And very very off topic. Usually indicates the reply is starting off on shakey ground and contains little facts or actual information. Let's read on now...

: Could have something to do with the company one keeps. Or maybe
: it's because dishonest people need validation from their own kind to
: keep them feeling OK about what they do. To them the whole world is as
: crooked as they are. Criminality loves company, or something like
: that.

Already deep and he hasn't said anything of substance... got your boots on..?

: But back to the question at hand.

So now everyone should take what you say as gospel from your diatribe above... hardly.

: Scooter, you want to know
: essentially if many hams run too much (i.e. illegal) power.

Was part the original questions wasn't it... oh, your just now getting to the real topic. Oh... excuse me... onward...

: Hm. Let's
: see. You want facts not opinions, so unlike Skipp May out in Davis,
: CA, I'll reserve my opinion for another time.

When your on shakey ground, attack a previous post without qualified or supporting evidence or statements. Does nothing to support the facts, in fact its a poor attempt to hide the real world story.

: To get a no-BS realistic
: answer to your question, first you'd want to investigate what the
: average ham runs for equipment and what bands he operates on. Also
: you'd want to know out of 650,000 licensed amateurs how many have been
: cited by the FCC for running illegal power on the ham bands. And you'd

: want to look over back issues of QST and CQ, some of the ham
: newsgroups, or the QRZ forum. Find out if they are filled with
: multi-KW amplifiers for sale. Read the letters columns, read the
: articles, and see if "running big watts" is the hot topic on
: everyone's mind.

Why...? does nothing to answer his question. Many hams and cb'ers are not average station equipment owners.... notice the original word "many." Tell the guy what the heck knowing the bands does for your argument. Have you been on any of the HF bands..?

Notice the ratio of CB and Amateur citations are very few to the whole number of operators... The number of citations is no indication of the relative number of people running large amplifiers.

Really large "Multi-KW amplifiers" are not so boldly sold through magazines and news groups. Many large amplifier people (some by profession) talk in various internet groups or list servers. I have membership on a few such groups. Few of the large amplifier people have ever been cited for over power operation. Clean power is just loud power unless you use it in bad form.

Big watts is a hot topic on a pretty good size group of the "amps members" group minds'. Enough so to justify a rather large member list server on the specific topic. No one I know in the group has ever been convicted of excessive power operation. Some have been inspected by the FCC.

: Finally, where would one most likely get honest, quantifiable answers
: to these and other ham-related questions? In a CB newsgroup filled
: with power-junkie CB'ers, pirate operators, freebanders, and

I guess that sums up everyone in the rec.radio.cb not a one honest, common sense, amateur, cb'er in the group... right..? You get real answers by asking questions and going through all the answers. Then they realize the Boobner answers waste a lot of peoples time.
There are no real world or technical answers available here... well maybe from the guy using the fake name of Aaron of course... :-(

: authority-hating, outlaw hams? Of course not. It only makes sense that
: if you want answers to questions about hams, go to where the majority
: of hams are. Try a ham forum, go to a local ham club, write to the
: ARRL, or if you live near a big city, stop into an HRO or AES store.

Why..? the majority of hams don't run high power amplifiers, but many hams do. So do many CB'ers. But if the guys asks you for real answers, you give him a lot of candy covered poop.

: As always, make up your own mind, don't let the repeaters of "CB
: myths" make it up for you.
: -Aaron-

Put your head in the sand or keep asking questions. Better yet, turn a receiver on to the HF bands and listen for yourself. I would suggest

operations from 1.8 to 29.7 could be monitored. The 20 and 15 meter amateur bands are just as busy as the 27.405 to 28. Mhz area, just with callsigns added in.

cheers
skipp

Dave Hall wrote:
>The problem is that YOU<

There is no problem, Dave.
Becasue you want to make me yours doesn't make one for another.

> continue to equate the FEDERAL CRIME, of illegal radio use (Which carries stiff fines and possible jail time)<<

(Sigh) Are you drinking Dave? Not that I care, but it may shed some light on this subject that you fail to comprehend. You will find nowhere in the FCC that says it is a federal CRIME to operate with an amp or freeband. More bullshit from the mudmaster.....

> with a "trivial" summary offense such as speeding.
<<

The ignorance is flowing from you today isn;t it?
Speeding can directly kill an innocent and has done so in the past. Freebanding between 11 and 10 meters hasn't...but I wouldn't expect you to be able to distinguish betweeen probabilities.

> These may seem, to you, <

To me?
To the LEO's.
To the cbers.
To the FCC.
To the rest of the world.
To many hammies.
And before you go crying about it again and citing an exception to the rules, your fight is with the feds, not me. Listen to 555 and tell me how bad it is. If the feds thought it criminal, they would do something. And for your buzzed out brain cells......breaking a mere FCC rule of freebanding in the context which we discuss it, or running an amp is not a federal crime, genius. I don't expect you to take my word for it, but I love when the irony of communication skills are lost on an angry hammie and is reflected through his ignorance. Especially when he's dead wrong and keeps arguing about it. Go ask a lawyer, you scholar, you.

>to be in the same
catergory on the grand morality scale, but I assure you that the Feds don't see it the same way.<<

Here comes the socialism of morality you always speak of as being related to the fall of the Roman empire and the end of hammie radio caused by a slug of a cber like me that laughs at your anger.

The majority here do not consider those acts criminal.

>And you still fail to name anyone that does not consider operating an illegal 11 meter setup to be a federal crime. <<

Most don't "consider" anything, Dave. Unlike you, they don't share your interpretations, they don't "consider" the law, they read it for what it says, and once again, nowhere does it say it is a federal CRIME to operate an 11 meter radio. You are asking to prove a negative...such as proving "God" exists. I think you're drunk on Burgundy wine.

>Most are at least intellectually honest enough to admit what they are doing is criminal, and just take their chances. You, on the other hand, live in some delusional dream world, and deny it.
<<

Now I know you;re drunk. Where have I ever denied it? Hell Dave, I wrote an article on my freebanding experiences and your band of posse trouble posted it here. How is that denying my actions? I'd call you a fool, but I think you;re highly intoxicated.

You are in the
minority on that, Hall. Deal with it. You have no support (at least publicly) except the hate posse of Dogie N8WWM, KC8LDO Lelnad, and Frank Gilliland, which is why you were so readily named by "arron".You are part of the
problem on rec.radio.cb.

>I was here long before you ever came on board.<<

Oh boy, that ranks right there with JJ's claim that something is to be gained from being a hammie for more than 40 years. Big deal.

> And I'll be here long after you leave. I will still answer any and all technical questions that may be posed, as well as those few from people who still don't understand where the line between legal and illegal runs.
<<

You talk it but you don't walk it.

>Just ask that last guy who was led out of the courtroom in shackles, for his willful violations, whether he was treated any differently from any other criminal.
Dave
"Sandbagger"
<<

Just ask the hammie in California who was doing the same thing only on emergency freqs. Once again, you invalidate your own pointless efforts by naming the rare exceptions to the rule.

>The fact that the feds do not prosecute everyone who runs illegally does not negate the law.<<

It doesn't? IT DOESN"T? The hell it doesn't. Stop drinking, Dave.
The law is negated every 4th of July with fireworks in many states...the law is negated every day by LEOs everywhere with mundane laws....you had an example here three days ago by a LEO...oh yea....you musta forgot.

> The feds are severely undermanned, and many people (yourself included) have enjoyed your freedom from prosecution.
<<

Now how the hell do you know that? How do you know if I was prosecuted or not?
How the hell do you know what I do besides what I allow?
Hahhahhahaa.....you're suffering from the seer syndrome that affects the trouble posse of rec.radio.cb named by your pal "arron" of yourself (Dave Hall), Lelnad C. Scott KC8LDO, Frank Gilliland, and N8WWM Dogie Adair.

>But the fact still remains that those who pushed the envelope a little too far found out just how much of a crime illegal radio operation really is.
<<

Huge difference between what they did and what we do. You know that, everyone knows that.

>It only takes one exception to invalidate a premise.
<<

Yup, and you have permanently stained your amateur ticket forever on.

> And your premise is that illegal operation is not a crime.
<<

Again you lie. I have never stated that. This is how you operate...you lie, lie and lie more whenever a point is made you don't agree with.
Don't worry about what I do Dave, your own credibility and ego has taken a beating that is almost rivaling N8's.

> Those high profile federal cases are all the proof anyone needs to see how wrong you are.
Dave
"Sandbagger"
<<

About what? About what you lied and attributed to me? HAhahahahahah! Try again when you become a man, Hall.

No, but operating a radio in violation of FCC rules IS criminal. The only thing is that you might get away with it for a while. But if/when you're caught, you will indeed find out what it feels like to be a criminal.
Dave
"Sandbagger"
<<

No Dave, it's not. When the majority are "busted", they receive a warning. If it was criminal, it would go to court.
Going on your non-logic, the hammies are a criminal ongoing enterprise, as they're popped each week. That means all hammies who have been addressed for, oh, say, not IDing on time are criminals. Ludicrous, Hall...just like you and your socialistic beliefs. You have some serious demons that need exorcised.

To add to Aaron's post, I have been a ham for over 40 years and I can
say with certainty that yes, some hams do run more than the legal limit
at times (and yes, some have been cited in the past by the FCC), but the
majority of hams who own amplifiers do not.
-
What is you definition of "some"? Is it the same as the FCC's? According
to them the numbers are in the thousands.
-

>Where does the FCC claim that hams by the thousand are operating
illegally? <<

Oh, just count the number of letters they send out to hammies for
violations. It's in the THOUSANDS. Don't ask me to do your homework,
you'll be pegged as lazy as Lelnad. You're a hammie...you know where to
get the info. According to the Hypocrite Hall, they are all federal
criminals.

You claiming you are a hammie
means nothing, and the amount of time you claim means even less.

>You claiming you are a cber means nothing and the amount of time you
claim means even less. <<

I didn;t put forward any time...you and the hypocrite Hall did, as if
you thought it meant something. As long as we're on the same page.

>At least I do hold a license, something you can't seem to accomplish.
<<

You keep mentioning a license. Why does it upset you so what I can and
can not do?It's
what you're about, not how much time you put in. I doubt both your
claims but I'm just a looooowly cber and it's a damn good think my
opinion counts for nothing or I might run the risk of single-handedly
pissing off the few arrogant hammies here.

>You're right, your opinion counts for nothing more than anyone else's.
<<

Thats' right. I'm a stranger and a faceless voice.
On the other hand, no one is stranger than you and the Hypocrite Hall
and the trouble posse members of Lelnad C. Scott KC8LDO, Frank
Gilliland, and N8WWM Dogie Adair.

Dogs in a pile....nuthin' left to do but smile, smile, smile!

the fcc cant
> pull the plug on it alone

For CBers in the USA they sure can. The band is listed by the ITU for
"Land Mobile Service" use. That could mean many things, including
turning the band over to a bunch of paying users who need it for
mobile operations, while kicking the non paying CBers off the band.

> and even if the itu tried the third world countries
> will never give it up.

Ask them and find out.

> mexico will be 30db over 9 no matter what riley and the
> feds do

Bush tells Mecico no more monatary loans, at the expense of the US tax
payer, like the $30B bailout Clinton gave them, if they don't clean it
up. I'll bet the band down there will go dead almost overnight.

> and thats just the real life truth whether you guys like it or not

Mix in some loan guarantees, favorable trade agreements, etc. and
watch how fast it changes.

>In what way? <

In the manner that you said you never did it.

>There's a BIG difference between casual listening to conversations over a PUBLIC forum, and deliberately gathering personal information to use against someone, which is the definition of spying.
<<

One doesn't have to employ the info for gain in order to meet the definition of "spying". You went as far as claiming that you can gather the type car someone has, etc. That is personal, along with their children, which you mentioned. Why would you gather that info at all? That is spying as presented in your unedited post.

>In your context,<

The context wasn't mine, it was yours. I merely pointed it out.

>I could accuse you of spying for all the google excerpts that you put together on me.<<

Hhahaha...yea, you COULD do that, truth be damned as usual when emanating from the trouble possse, only I don't have to "put together" anything on you Dave,,you do quite fine yourself,,,,I just merely point it out.
Besides, that would make your fallen comrades, named by "Arron", of Lelnad Scott KC8LDO, Frank Gilliland, N8WWM Dogie Adair and your socialistic-self of course, all hypocrites if you were to make such a remark.

>It's the same thing. But I wouldn't expect you to understand the subtle distiction. You just can't seem to grasp concepts.
<<

Actually, that was YOU saying you couldn't grasp anything beyond your two pitiful reasons why a cber doesn't upgrade.......the same argument can be used against nocodes, etc., all the way up the ladder.. Now that you're sorry you said it, you are going to try and attribute me to saying it was *I* that could not grasp a simple concept like that? Hahahah! "Fraid not,
Hall. You lie again. It's YOUR white-knuckle grasp on rec.radio.cb bellowing how you can't grasp things...not I.

>Maybe that's the fault of that lousy newsreader you use. The one that quotes so poorly, and chops paragraphs and mixes in passages from other people. No wonder you don't know who said what half the time.

<<

Another lie. It's not I misattributing quotes. It's you and "jj". Need reminded of the posts you forgot? Plenty of unprovoked malice in them. Now why would you say I misquoted someone? Hmmmmmmmmm? Falls under your failed "If I repeat it enough they may believe it" mantra that "arron" employs.
Deliberate untruths from you yet again. Let's not mince words, Dave...you're a liar and just proved it again.

>So NO, I don't SPY on people.<

The stop trying so hard to defend it. Your posts speak for you. Just because you can't control the ng's correct interpretations of your posts you gonna cry all the way home?

>That post was in response to a person, who had gave a reason why he didn't want to be a ham, because a call sign and all his associated information would become public knowledge. I countered that people who have nothing to hide, have nothing to fear.
<<

Hey, it ain't me you have to clean up your lies to. You said you never claimed such actions, yet here is the post where you did it.

>That proves nothing.<

Then stop defending it so vehemently.
Here you are once again underestimating the contingency of intellect on this forum.
It proves plenty.

>I also made reference to the false comfort that relative anonyminity brings to many CBers.<

Is that why you posted under different names, because you think no one can recognize they
came from you?

>I NEVER posted under a different name. Even when I was using a university account 7 years ago, I still signed my name. This allegation really has shown the depth of your paranoia.
<<

Well, I never made several of the quotes you attributed to me today. those allegations really have shown the depth of your paranoia <g>.
A mere question and you feel yourself qualified to play shrink. I think your admitted pleasure you find in anothers grief says more than my inquiry as to whether you have mulitple names as far as analysis goes.

>They (wrongly) think that just because they don't give out a call sign, and use a cryptic number or handle as an identifier, that a clever person could not find out a ton of information just by listening over a period of time (You know, listening. You should try it sometime).

<<

Nah...I'm not the slightest bit interested in personal info on strangers on the radios. I have a life that takes the place of such delights.
.
>

>No, but you seem to live to gather up all sorts of info on people over usenet.

Again, I gather nothing. If someone comes at me, I can usually defend myself with the truth. All I need do is point out the trash you put forth.The truth is something that you,, Lelnad KC8LDO, Frank Gilliland and Dogie Adair N8WWM have demonstrated you can not handle.
You just can't get over the fact that most hammies see you as a sore spot, but again, I'm just a lowly cber and my opinion means squat compared to your exalted and elevated imaginary status that comes by sole virtue of a ticket that demands and commands respect.

>I find it somewhat frightening that you remember a post that I made two years ago.
<<

I didn't remember it....it was sent....by another hammie that sees you for who you are and knows your type quite well. Frankly, what you find "frightening" is no surprise.....we merely put that in with the ridiculous context of that which you consider "criminal" and your credibility and intellect suddenly speaks for itself.

>I'm sorry, but nothing that I've said here is so important that I memorize each post word for word. And I especially don't remember things that you have said. It's just not that important to me.
<<

Then stop defending your posts with such rancor. Doncha just love usenet? Of course you care, Dave. Hammies are supposed to care, there is no shame in that and you should never hide that or allow your opinion to be swayed by a lowly cber.

>Many people unknowingly give out many clues to their identity during routine QSO's. This has been the subject of many courses on protecting your family, and involves not only radio conversations, but exchanges over the internet as well. I gave a true life example of how it could be done, but you, in your ever twisted world, took it completely out of context.
<<

Not at all. The gist of what I said is that you are so interested in other's lives that you
devoted an entire topic to it.

>I did not "devote" an entire topic to it. I responded to another's inquiries, and cited an example of how he should not feel so comfortable

in his relative anonymity. How you could equate that with "spying" is a stretch.
<<

I didn't. You did. You just claimed that gathering personal info is considered spying...or did you forget already? The reason WHY you did it, Dave, isn't really important. You keep focusing on defending and explaining your actions away. Your apologetic mode for what you wrote in the past would be commendable, if it were done with any integrity, but the fact that you keep humping my leg over this.....

>But I've come to expect that from you. <

Which is why you would much rather prefer "shooting fish in a barrel." (your words).

>The king of obfuscation. Feel free to add that to your "vernacular".
<<

You probably read it from one of my posts, or one of these other lowly cbers that always seem to have you on the ropes. Besides, there is no obfuscation except on your failed but amusing attempts at lying your way out of your own words. I need obfuscate nothing....just merely point to your own words.
You denied it, and as always, need reminded because you always seem to "forget" about the posts you made.

>Of course, because what you said wasn't true. <<

No Dave, YOU said it wasn't true. You said you never did it, were shown you not only did it, but YOU even told the exact definition of spying as "gathering personal information."
  I would say such things as satellite photos (even if they are from the 70's) referring to the type car one drives, and how many children one has, can be considered spying. I am so confident, in fact, that my registering the pulse of the majority of cbers is much more accurate than yours, that I am willing to wager that the majority also will see that as spying.
But you go on believing that the contingency will believe what you tell them and not what they see in your posts.

>A post where I was advising someone to be careful of what they say, turns into "I'm spying on people".
<<

No, a post where you admitted doing it is in direct contradiction with your denial that you NEVER did it.

>I never spied on people.<

First you say the gathering of such info is spying, then you say it's not. Oh, I get it, it's one of those things where you can claim you don't remember saying it if poven wrong.

>I find it interesting that you devote so much time to finding out information that you hope will discredit me.
<<

There is the paranoia. The only thing I have done is remind you of your lies by pointing them out.

>The mere fact that you are doing this tells me that you consider me credible enough to cause you to go through this effort on your little crusade.
<<

Google that word too, while you're at it <g>!
Like the mere fact of you redundantly and so desperately defending your posts and actions?

>Something I've said has touched a nerve in you, and that's made you feel uncomfortable.
<<

Keep thinking that way. I love it when a good plan comes together.

>If you truly felt the same way about me, that I do about you, I'd just go on and let you babble in the wind, being careful not to be downwind from your spittle......
Dave
"Sandbagger"
<<

Difference is, I DON'T feel the same way toward you. I have no ill will, nor malice toward you. You are no one to me, therefore, there is never a need for it to become personal. YOU made it personal, Hall, just like your little posse of contempt you belong to that "Arron" formed and called you by name in. I have made many times, the statement that I shall point out the bullshit and disinformation shoveled upon this board concerning cb law and related items when I am in the know.
  I have no need to insult you..do not cry crocodle tears when you lob something in my backyard and I throw it back twice as hard. The damage was done to your glass house looooooong before I ever became your focal point of devotion and object of affection.You are a stranger with many problems. I don't hold it against you. People with emotional scars and problems can be helped,,,,,,,,intentional hate toward cbers with non-deserved insults all through your posts show this ignorant side of you. Ignorance can also be cured, but only if one so chooses. Too bad ignorance wasn't painful.

There are several very small units. Uniden has a few. If you just want a basic little CB for the road, try one with the works built into the mic unit, and mount the other unit out of the way.

Not sure who I would contact. I took a look at their sight and based on the product catalog and a site search it doesn't exist in the catalog. Oh well, just curious if it is any good or just basic RG8. Just got home from work and I've got about an hour before the wife gets home. Just enough time to fire up the radio for some fun and search the web again for info on this stuff. Thank you for the input Doc.

Source record: 140278

Nicad Voltage Geeks:
I received a bad charger with a used 9.6 volt Sears cordless drill (industrial supposedly).

Sears would NOT sell me a new transformer for it! they wanted $50 for a new charger, while my brother in law got a new one, drill with flashlight, on sale that saturday for $40 ! So I went to the parts store and got a new exact size transformer for the charger for $10 ! Problem is that the transformer is center tapped for 2 voltages. Another guy had a working 12 volt charger I took readings on, so I hooked up 9 volts into the rectifier instead of 18. Terminals to the battery have 12vdc with no load on it. Seems to charge the battery, but not up to 9.6v. DO I need to:
a) put the full 20vac into the charger for more volts to the battery (I was afraid that 20v would be too much, since the 12v charger had less than that on it, or

b) the batteries are getting bad, which could be.

THE question is: What volts AC should I put into the rectifer, 10 or 20? This unit is CHINA made, so I figure it can't be too old. I discharged the batteries to zero before charging 1/2 day. It says a 1 hr. charger is what it is, and the green light comes on when charged. OR should I charge a battery with it apart, and check volts going to the battery at the end of the charge?

It is sickening that they want us to keep buying more to support china, when we can fix it ourself with a Taiwan transformer that was the exact same size!
Dave!

And all those are for running illegal power? Really? Read the
subject line, illegal power was the subject here twistieboy or did
you forget?

To further comment that some hams do run illegal power, I once
visited a 'contesting' station that consisted of an operating
position for each HF band, each rig drove a linear that was
capable of at least twice the legal power limit for the ham bands,
and they were run full tilt during a contest (not that any of the
operators would ever admit it). This setup belonged to a young
bachelor who had more money than anything else. He purchased 5
acres just outside of Dallas, Tx to build this contest setup. He
had the house built with two dormitory rooms with beds for the
contest operators to sleep in shifts so the station could be
running 24 hrs during the contest. Last time I was there I counted
11 towers, all antennas were fed with 3/4 in hard-line. Some
towers had stacked beams fixed on certain parts of the world,
others could be rotated. I saw a full sized 75 meter beam being
assembled on the ground to go up on one of the towers.
And some say that cbers with 12 alternators mounted in their truck
to drive their big amps is going overboard. Hummmmm.

I bought this radio one year ago. It has only been used by me as a base station, has never been in a car. I had it professionally tuned up. It has Variable PWR from .5 to 8 watts and modulates to around 30. Modulation has been tuned up as well. This is a VERY loud radio and has alot of swing. I still have the Galaxy 55 Box, mounting brackets, power cord, the original stock hand mic, manuals, and whatever else it came with. I have it all. Has the freq counter, large eas to read meter and has Bands A thru F giving you 240 channels. I promise you will not be disappointed with this Galaxy. $170 ... Thanks for looking

Hrm.. Some definitions:

Transsexual: Someone who believes they were born the wrong gender, and a exchange done to change their gender.

So a transsexual homo would be, then, for example, a man who's been changed to a woman, and likes women. Therefore a Lesbian, or a straight woman?

Does it really matter, though?

What difference does it make, when someone is operating out of band,
it is illegal period, regardless the output wattage. Whether its 4 watts,
or several thousand watts, its still illegal. Your arguement is specious!
When you're out of band, you're out of band.

WRONG!

Sec. 1.903 Authorization required.
(a) General rule. Stations in the Wireless Radio Services must be
used and operated only in accordance with the rules applicable to
their particular service as set forth in this title and with a valid
authorization granted by the Commission under the provisions of this
part, except as specified in paragraph (b) of this section.
(b) Restrictions. The holding of an authorization does not create
any rights BEYOND the terms, conditions and period specified in the
authorization....[emphasis added]

Which means that a station licensee has the RIGHT to use the
authorized frequency according to the terms of the license.

>> use it or NOT to use it anytime they choose, and if they choose not to
>> use it at any particular time that doesn't give ANYONE ELSE the right
>> to use it unless they are LICENSED! There are a lot of frequencies and

I listen, and they ARE being used. If you can't hear them, try
listening for some of the LEGAL stations.

> >Now is there something about this
>> fundamental {but wrong} concept that{ yeti represented } you can't
>comprehend?

>get it right,then I'll get back to you on this.

I got it right the first time (and the second time, and the third
time, etc). You can get back to it anytime you want, because no matter
how long you take you will still be WRONG!

Subject: The Big V followed me! Some of you may be infected by this
"troll" not w-w!
Newsgroups: alt.religion.w-w-church-god
Date: 2002-03-07 10:24:48 PST

Hi Jamey, My name is Woody Parr and I'm up the road in Cornelia. I'm
afraid that I'm indirectly responsible for this troll who is
badmouthing you at alt.religion.urantiabook. You see he was only there
in the first place to attack me.

This idiot is Steven J. Rogovich, 1612 Lake Christopher dr. Virginia
Beach, Va. 23464 He followed me to the UB usenet page from
alt.radio.pirate He and I (were) both formerly loosely associated
with each other in the shortwave pirate radio listening hobby. I USED
to be a shortwave pirate but my station has been permanently retired
for more than 2 years now. Stevie is still a pirate and is the
operator of the station Radio Free Speech. He is also the moderator of
a message board at the Free Radio Network < www.frn.net > and goes by
the handle of Pat Murphy there. I had a falling out with the people at
the FRN a couple of years ago as they became corrupt and were doing so
inappropriate things. I dared to open my mouth and openly complain
about there stupid activities which since they havn't yet ceased to
follow me around the internet anywhere they can and attack me.

Steve is also on the usenet trolling people under the name of Richard
Cranium (richardcranus@yahoo.com) He's far too much of a coward to
debate anyone using his real name.

Hi Jamey, My name is Woody Parr and I'm up the road in Cornelia. I'm
afraid that I'm indirectly responsible for this troll who is
badmouthing you at alt.religion.urantiabook. You see he was only there
in the first place to attack me.

This idiot is Steven J. Rogovich, 1612 Lake Christopher dr. Virginia
Beach, Va. 23464 He followed me to the UB usenet page from
alt.radio.pirate He and I (were) both formerly loosely associated
with each other in the shortwave pirate radio listening hobby. I USED
to be a shortwave pirate but my station has been permanently retired
for more than 2 years now. Stevie is still a pirate and is the
operator of the station Radio Free Speech. He is also the moderator of
a message board at the Free Radio Network < www.frn.net > and goes by
the handle of Pat Murphy there. I had a falling out with the people at
the FRN a couple of years ago as they became corrupt and were doing so
inappropriate things. I dared to open my mouth and openly complain
about there stupid activities which since they havn't yet ceased to
follow me around the internet anywhere they can and attack me.

Steve is also on the usenet trolling people under the name of Richard
Cranium (richardcranus@yahoo.com) He's far too much of a coward to
debate anyone using his real name.

Hey, it's your right to post your subjective opinions, but subjective opinions are not my definition of "real answers". That's why I didn't offer a subjective opinion in this case. Instead, my advice was to seek more reliable sources. If the question is centered around "what many hams do", then the "real answer" should come from sources that better represent the mainstream majority of many hams. Not from "some guy named skipp who says he's a ham and that hams run illegal high power all the time". That's how CB Myths get started.

I was wondering if anyone could help me out here...

I have wondered for years, does anyone know the *true* story behind the D&A amps?

I heard there's a picture floating around on the 'net' of the two builders on those amps? does anyone know where one could go look at this?

I wonder if anyone has a website devoted to this story... Heck, I could be convinced to but one up, if anyone is interested... could be info site with pictures, if i could get in contact with the original builders, I'd even include pictures from the old days... anyone interested in this?

were they really built in scottsbluff, AZ?

E-mail it if you like... or post it in here, would make for some interesting reading...

There, you just denigrated it! You don't even know it when you do it.
And you consider that a "lie" from me. Another shining illustration of
your lack of reasoning or cognitave ability.

Try to tell a nut that he's nuts, and he'll swear that you're crazy.

I'll let you in on a little secret: Those people who made that first
step, and passed the no-code, don't give a rat's ass what you think of
it.

> It is an introductory, nothing more.

Yes it is, and as such, passing the test qualifies it as an achievement.
Which, by the way, is more than a bunch of no license, illegal
freebanders can claim.

Is the FCC a FEDERAL agency?

Was "Rabbit Ears'" case heard before a FEDERAL court?

Is "Rabbit Ears" spending the next 15 months in a FEDERAL prison?

Is "Rabbit Ears" paying the FEDERAL gov't a nice check for $25,000?

Sounds like a FEDERAL crime to me.....

But I guess you still feel that "Rabbit Ears" is not a "criminal".

Just to refresh your memory:

http://www.arrl.org/news/stories/2002/08/29/100/?nc=1

That's hardly in the same vein as a speeding ticket..

> Speeding can directly kill an innocent and has done so in the past.
> Freebanding between 11 and 10 meters hasn't.

A speeding ticket won't land you a $25,000 fine or 15 months in jail
either. And the federal gov't doesn't issue speeding tickets either.

Let's review now shall we boys and girls:

Speeding ticket: Summary offence, usually accompanied by a fine of not
more than $150 depending on the state, and just how fast you were going.

Illegal radio operation: A violation of federal rules and regulations,
which carry with it fines into the thousands of dollars, and possible

jail time.

Now, which would you rather have happen to you?

>

I would also like to see his data supporting the allegation that "many"
(And what number qualifies as "many") hams run illegal power.

Since doubling power results in a signal improvement of only 3 db, it
would be difficult to identify a ham running illegal power until he was
running power that is way over the limit (15KW or more). Most ham
amplifiers, while capable of running at twice legal power, would never
be able to support the power necessary to be noticed by casual
listeners. The few guys that go out of their way to obtain an amp
capable of 15 KW plus, are certainly in the minority, but I'm sure it
does happen.

Ham's are, afterall, only human. Much of the same character flaws that
make some CBer's bend or break the rules, are also present in many hams
as well.

But the point is, what IS the point? Does the fact that *some* hams
break the rules, make it ok for *some* Cbers to break the rules? That's
hardly justification in my book. I only know what *I* run. I don't run
any more than 120 watts on HF and no more than 200 on VHF.

> children, which you mentioned.

According to the American Heritage dictionary, the definition of
"spying" is as follows:

1. To observe secretly with hostile intent.

2. To catch sight of.

3. To investigate intensively.

Now, which of these definitions fits what I did? I neither had hostile intent, "saw" anyone, or applied "Intensive" time finding out the information. This was just casual listening over a period of time, just like any other CBer does when the radio is on. I wrote down nothing, and should I be faulted if I hear something and it commits to memory?

It's called LISTENING, sandbagging, copying the mail. Maybe if you weren't so wrapped up in talking to some pile of dirt in the middle of nowhere, you might be quiet long enough to actually hear what goes on in your area. The fact that many people unwittingly give out "personal" information over the air freely, is not my problem. If I were a person of dubious character, I might be able to use that information against them. But I presented that as an illustration of why you should be careful what you say over a PUBLIC forum, such as CB radio, as anyone can hear you. And as such, you should not feel so anonymous on CB radio, just because you use a "handle" or "unit number", if you are going to blab your life's history to the next guy on the channel.

When the skip finally fades out, and you're left listening to such wonderful people such as Big Bird, King Kong, Big John, and Starface,

you might want to listen a little more.....

> Why would you gather that info at all?

To prove a point. Why do you shoot skip? Just pick up the phone.

> That is spying as presented in your unedited post.
>
> >In your context,<
>
> The context wasn't mine, it was yours. I merely pointed it out.

Incorrectly as usual.

> emanating from the trouble possse, only I don't have to "put together"
> anything on you Dave,,you do quite fine yourself,,,,I just merely point
> it out.

Which is EXACTLY what I did over the air, an act for which you accused me of spying. So, if by your definition, I am guilty of "spying", then you are equally as guilty, for all of your "googles", which, took far more effort, on your part, to obtain, then my causual listening.

> Again, I gather nothing. If someone comes at me, I can usually defend
> myself with the truth. All I need do is point out the trash you put

No, let's clarify this once and for all. I enjoy yanking *YOUR* chain
and watching *YOU* writhe like a fish on a hook. I do not treat other
people with the same distain, simply because they act appropriately,
with courtesy and a modicum of decorum (Another phrase to add to your
growing list of "vernacular").

Time's running short. I am just about finished with kicking the punch
clown for now. So you'd better say something meaningful (if you can) in
the next day. Come Friday, I will return to ignoring you, until I feel
the need to kick the punch clown again.

Glad you checked. Never mind that my figures were accurate.....go on.

>You still haven't pointed to any sources of this FCC claim that hams by the thousands are running power over the legal limit.
<<

I never made the claim. Read the post s-l-o-w-l-y. And do try not to misattribute, if you can manage, old chap.

>Did this come to you in one of your drug induced dreams twistie? <<

What did I say that upset you so that you would make you so desperate as to keep trying to imply something personal with me? Is it that I shined a light on "Aaron" naming Lelnad C. Scott KC8LDO, Dogie Adair N8WWM, Frank Gilliland, and socialistic Hypocrite (Dave) Hall as his personal posse of trouble destined to cause malice on rec.radio cb?
Hmmmm.....inquiring minds.....don't give a damn!!

>that is only approximately 1% of the licensed
hams. Whereas 100% of
all 'freebanders' are running illegal power
<<

Seer malady.....exclusive to the rec.radio.cb trouble posse named by "arron" of N8WWM Dogie Adair, Lelnad C. Scott KC8LDO, socialistic Hypocrite Hall, and Frank Gilliland.

>Whatsamatter twiesieboy, can't handle the truth that all freebanders are running illegal power?
<<
(chuckle) That's rich. Your shallow and limited mind somehow equates your meaningless opinion with "Aaron's" post where he named the rec.radio.cb trouble-causing of posse KC8LDO Lelnad C. Scott, Frank Gilliland, N8WWM Dogie Adair, and socialistic Hypocrite (Dave) Hall. I think you're just angry that you were not consulted before being named....gotta love that Aaron guy, huh?

>as 'freebanders' are not legally authorized to run any power on the so called freeband frequencies.
<<

Not true. FCC says anyone can run any power any where they want in a true emergency. Besides, I never claimed differently. Learn to speak for yourself and think for yourself and stop being a follower of socialistic Hypocrite Hall's troubled posse that lies and misattributes things to those that make a point or express a view they disagree with.

>I guess
<<

Stop guessing, man. You embarrass yourself further with each hazard.

>all of your and the other transmissions heard on this so-called 'freeband' are true emergencies,
<<

Never claimed that nor inferred it. You did just now, cause it's all you got. Poor old chap. Maybe an upgrade.....

>yea right!!
<<

More like, "Right on!!!!!" "Tin Fo' Gud Buddy?" LMAO!

Don't forget Twistedhed's "natural law supercedes man's laws" excuse.
-A-
--
That's basic science. Most won't forget that. You can legislate all you want against gravity, it won't change the characteristics of it. Same with skip propagation on cb or anywhere else. Legislate away....doesn't change a thing. Most people are already aware that man's law can not supercede natures law......then we have your camp that practices KC8LDO Lelnad logic, where he teaches that logic is nothing more than a shared belief held by you fewls.....

More lies from Dave Hall.
I don't denigrate other's achievments. A nocode license is NOT what I would exactly refer to as an achievement in the world of hammie radio.

N3CVJ wrote:
>There, you just denigrated it! You don't even >know it when you do it.

And you consider that a "lie" from me? Amazing. I clearly said what *I refer" to, perfectly illustrating my personal opinion which I have stated many times in the past concerning the nocode exam. Yet another shining illustration of your lack of reasoning or cognitave ability. Try to tell a socialist that he's nuts, and he'll swear that you're crazy.

>I'll let you in on a little secret: Those people >who made that first step, and passed the >no-code, don't give a rat's ass what you think >of it.

And they shouldn't.
It is an introductory, nothing more.

>Yes it is, and as such, passing the test >qualifies it as an achievement.

Maybe to people like yourself.
Here again is where your socialism rears it's ugly head. You are upset (evidenced by your sudden anglo-saxon terminology) because others do not hold the same reverance for that piece of paper that you do.....Dave, get over yourself already.

>Which, by the way, is more than a bunch of no >license, illegal freebanders can claim.
>Dave
>"Sandbagger"

No, it's not actually. We can claim over 100 DX countries, with cards to prove it, on HF.
Nocodes can't do that.
Go take a goodies powder....maybe check the classifieds today, Dave.

(

Sigh) Are you drinking Dave? Not that I care, but it may shed some light on this subject that you fail to comprehend. You will find nowhere in the FCC that says it is a federal CRIME to operate with an amp or freeband. More bullshit from the mudmaster.....

>Is the FCC a FEDERAL agency?
>Was "Rabbit Ears'" case heard before a >FEDERAL court?
>Is "Rabbit Ears" spending the next 15 months >in a FEDERAL prison?
>Is "Rabbit Ears" paying the FEDERAL gov't a >nice check for $25,000?
>Sounds like a FEDERAL crime to me.....
>But I guess you still feel that "Rabbit Ears" is >not a "criminal".

Were we talking about Rabbit Ears? No.
We don't do what Rabbit Ears did. If you wish to make that analogy and keep comparing simple freebanding between 10 and 11 and some DXing to the antics of Rabbit Ears, then the same can be drawn from the clown hammie in California that got his kicks messing with the cops and emergency freqs to your indiscretions. As always,,,,,ludicrous, Hall simply ludicrous.

>Just to refresh your memory:
>http://www.arrl.org/news/stories/2002/08/29/10>0/?nc=1
>That's hardly in the same vein as a speeding >ticket..
>with a "trivial" summary offense such as >speeding. <<

And that would have what remote connection to a simple freebander getting a warning letter for the first, second, maybe third time? And have you EVER found a cber guilty of the "Federal Crime" you say exists of DXing?
Go grab that goodies powder...your head is in terrible shape.

The ignorance is flowing from you today isn;t it? Speeding can directly kill an innocent and has done so in the past. Freebanding between 11 and 10 meters hasn't.

>A speeding ticket won't land you a $25,000 >fine or 15 months in jail either.

Neither will simple DXing and freebanding between 10 and 11. It will get you, at the most, a warning letter the first time.

Don't cause a problem and the letter is a given.

>And the federal gov't doesn't issue speeding >tickets either.
>Let's review now shall we boys and girls:
>Speeding ticket: Summary offence, usually >accompanied by a fine of not more than $150 >depending on the state, and just how fast you >were going.
>Illegal radio operation: A violation of federal >rules and regulations, which carry with it fines >into the thousands of dollars, and possible jail >time.
>Now, which would you rather have happen to >you?
>Dave
>"Sandbagger"

How come all these hammies aren't in jail that receive notices each week? Why aren't they all paying fines? Because what you say simply doesn't take place, these people are not federal criminals, and a warning letter is always sent first. You failed (yet again) to mention that.

>According to the American Heritage dictionary, >the definition of
"spying" is as follows:
>1. To observe secretly with hostile intent.
>2. To catch sight of.
>3. To investigate intensively.

I can't utilize sophomoric tools in my work. I prefer Webster's Encyclopedic Unabridged Dictionary of the English Language...the definitve informative master dictionary preferred by scholars everywhere. According to my dictionary, the term has 12 definitions. AS usual you only offer only half-truths, your biased version. The facts are, what you have done is also considered spying.
To wit: to search for or examine one closely without their knowledge; the gathering of secret or personal information.

>Now, which of these definitions fits what I did? <

This is the same comprehensive problem where you can't seem to grasp more than 2 reasons why cbers wouldn't be interested in getting their hammie ticket. You had to actually look up the word to realize the meaning of the word and you can only offer
3 definitions of the word so since you haven't been educated on the rest, they must not exist. Speak of narcissistic.

>When the skip finally fades out, and you're left >listening to such wonderful people such as Big >Bird, King Kong, Big John, and Starface, you >might want to listen a little more.....

Those the guys stepping on you that gave you a hard-on for cbers who express an opposing view?

  Why would you gather that info at all?

>To prove a point. Why do you shoot skip? Just >pick up the phone.

Skip is free. Your analogy sucks.

That is spying as presented in your unedited post.

>In your context,<

The context wasn't mine, it was yours. I merely pointed it out.

>Incorrectly as usual. <

If it's incorrect, it will satnd on it's own and needs not your willful defense.

>I could accuse you of spying for all the google >excerpts that you put >together on me.

Hhahaha...yea, you COULD do that, truth be damned as usual when emanating from the trouble possse, only I don't have to "put together" anything on you Dave,,you do quite fine yourself,,,,I just merely point it out.

>Which is EXACTLY what I did over the air, an >act for which you accused me of spying. So, if >by your definition, I am guilty of "spying", then >you are equally as guilty, for all of your >"googles", which, took far more effort, on your >part, to obtain, then my causual listening.

First of all, it wasn't MY definition, it was Websters. Secondly, your lie that exposed you was emailed to me, along with several others. Doing what I do, I indeed verified it before presenting it here in it's unedited originality and self-contradictory form.

Again, I gather nothing. If someone comes at me, I can usually defend myself with the truth. All I need do is point out the trash you put forth.The truth is something that you,, Lelnad KC8LDO, Frank Gilliland and Dogie Adair N8WWM have demonstrated you can not handle.

>I have no problem with the truth. But the truth is something that alludes you.
<<

Hall,, you have made many untruths in this thread. I have made not one.

You just can't get over the fact that most hammies see you as a sore spot,

>Here you go again speaking for "most >"something"". Name the hams that >think I'm a "sore spot.

Nah......I'll let you worry about that. When I receive something in my email and it is of good intention, I am a man of honor and always keep my word. If I am asked to keep the strictest of confidence, I do. If that upsets a proven liar like yourself, I think I can somehow summon the inner strength needed to carry on. It is why I asked your permission to post an email concerning you before doing so, I would not do such a thing or betray a friend or my radio services.

but again, I'm just a lowly cber and my opinion means squat compared to your exalted and elevated imaginary status that comes by sole virtue of a ticket that demands and commands respect.

>Something for which you do not have what it >takes to achieve.
>Go ahead, prove me wrong. Get your ham >icket. You don't have to use it. But if it is such >a "no big deal" as you claim, then shut us up >once and for all, and prove you're more than a >babbling idiot.

Dave, for the last time, not everyone shares your limited reasoning of why all cbers do not get a ticket. I cant make it any plainer, it's just that something will not allow your gray matter to comprehend there is

more than your views alone to matters on Earth.

>I find it somewhat frightening that you >remember a post that I made
>two years ago.

I didn't remember it....it was sent....by another hammie that sees you
for who you are and knows your type quite well.

>Any ham that would run to you with the >USENET equivilent of yellow
journalism, is not >anyone for whom I would hold in high esteem.

It was to show you lied, and hopefully send you a message from an allie,
not a foe. You are damaging not only the status you try to command by
virtue of your ticket, but you were at one time supposed to set an
example...not call those that you do not agree with federal criminals,
hurl insults, and make posts about nameless and faceless cbers that are
nothing more than something to fill your need to spew personal venom
from which you admitted taking pleasure in.
You're a sorry azz example for a hammie N3CVJ, but then again, it's why
you were named by Aaron Voobner as a member of the rec.radio.cb hate
posse of yourself, Frank gilliland, Lelnad KC8LDO, and Dogie Adair
N8WWM.

Frankly, what you find
"frightening" is no surprise.....we merely put that in with the
ridiculous context of that which you consider "criminal" and your
credibility and intellect suddenly speaks for itself.

>And anyone, with an ounce of common sense, >and who is also not morally

Again, your limited definitions and socialistic views nullify whatever
it is you were trying to convey concerning morals.

Dave

Isn't this the frequency you have previously said is where alot of Big time
Super bowl operators hang? So if Illegal power is being run here it is by
the same Illegal citizens who use Illegal power on Channel 6 why would that
suprise you, you do drugs, and probably sell them as well so why would a
few trivial radio laws be of concern to you. Just as those same guys who use
channel 6 could care less about following FCC laws on any band they use.
Toll Free,comes to mind, as well as Jay and a few others who have licenses
yet are Hi power Cb guys as well.

Taking delight in anothers dilemma.
Now that's sick and antisocial.

>No, let's clarify this once and for all. <

You already did. Now that you had a drunk night of sleep you think you are going to come back here and explain it away?
Ever stop to wonder why it is that you must constantly be trying to defend and explain your posts, especially since you profess "not to care??

>I enjoy yanking *YOUR* chain <

The "Who" doesn't matter, Dave, just like the "why" doesn't matter when you are always frittering away at trying to explain and give reason and justification for your behavior.
The mere notion that you derive pleasure from trolling a cb board and "yanking" the "chain" of someone you have no idea who you are attempting but failing to argue with is much more troubling to the hammie radio community as a whole than any point you are trying to make with a faceless, nameless cber I mean, good God, look at yourself and what you are doing...hahahahha!. At least have the good sense not to present yourself as a representative of hammie radio when going such things, it's poor for the image. Perhaps you don't even give a damn about the hobby, let alone yourself.

>I do not treat other people with the same >distain, simply because they act appropriately,

You are not the judge in what is proper. Matter of fact, you have proved you are so far removed from what is the majority that you are seriosuly out of touch...you can't even see it.

>with courtesy and a modicum of decorum >(Another phrase to add to your growing list of >"vernacular").

Oh, your insults are becoming so....so.......sophomoric.

>Time's running short.<

Well, when you have time, run and see the whopper lie you just told and see
how I treated you vs how you treated me when I enetered the room. Look who began huring insults and not practicing an ounce of "decorum" .

> I am just about finished with kicking the punch >clown for now. So you'd better say something >meaningful (if you can) in the next day. Come >Friday, I will return to ignoring you, until I feel >the need to

kick the punch clown again.

The subject was hams running illegal power, you still ignore the
question. I will ask again, are all those violations issued to
hams for running illegal power? I think if you really check you
will find that few are. I guess if you can't back up your claims
just keep repeating them over and over and maybe someone will
believe you. You are blinded by ignorance, sorta like timmyboy.

And we all know you care nothing about legalities timmyboy
nebonehead, you think if something isn't being used it is yours
for the taking even if it doesn't belong to you.
When I operate I am legal. Why should anyone want to do otherwise
when it is so easy to be legal? Must be the criminal mentality at
work.

And just how many rigs do you think have a calibrated s-meter?
Even if it is accurate on one band it won't be on other bands. You
need a lab grade receiver to have accurate s-meter calibration on
different bands.

Your s-meter is the least indicator of excessive power operation.
I have had stations running 100 watts pin my s-meter from great
distances.
>

Band conditions can cause s-meter reading all over the place. A
station running 100 watts can pin your meter while another station
running 2000 watts may just slightly make it move. It all depends
on the skip and band conditions between you and the other
stations. The s-meter is only a relative indication, you can no
more tell how much power a station is running by the s-meter than
you can by just listening to the signal.

...which underscores the double standard by which you are seemingly unaware of. The same criteria, by which I present "what *I* refer to" in reference to any topic, brands me a "liar" in your book, yet when the table is turned on you, you hide behind "It's only my opinion". Which is it then? Are we both liars, are are we both just stating our opinions?

> Try to tell a socialist that he's nuts, and he'll swear that you're
> crazy.

Try being a little more original. I see that you took a fancy to the term "sophomoric" which I used a few posts back, and are now using it quite regularly. I can see that you are, if nothing else, broadening your vocabulary. Now if we could only work on those reasoning skills.....

> >Yes it is, and as such, passing the test >qualifies it as an
> achievement.
>
> Maybe to people like yourself.
> Here again is where your socialism rears it's ugly head.

While we're on the subject:

Socialism, n. "A social system, in which the means of producing and distributing goods are owned collectively and political power is exercised by the whole community."

Now, what part of that applies to anything even remotely related to anything that I've said?

I guess you feel that anyone who believes in law and order, and does not selectively break laws is somehow a socialist?

Maybe if your parents had taken some cat-o-nine tails across your sorry butt, when you were a misbehaving child instead of adopting the neo-liberal-hippie style of allowing children to "express themselves", even when those actions were bad, you might have a greater respect for doing things the proper way, and you wouldn't be so anti-social.

> You are upset

Hardly. You still don't get it do you? You, my punch clown friend, are my entertainment. As of Friday, I will be done with you. Unless, of course, you actually have a coherent thought, and decide to approach a subject rationally, instead of confrontationally.

> Nocodes can't do that.

You make the erroneous assumption that DX is the be all, and end all, of ham radio, or radio in general. Personally, I find the pursuit of DX to be pointless and boring, and conducive to interference, a flash point for hostilities, and generally shows the "bad" side of radio operations.

No one will be happier than I will be, when cycle 23 is in the can, and CB can return to normalcy.

No code hams can legally build their own equipment, own and operate repeaters, operate on many modes, including modern digital modes. And if they get the itch to talk farther than a hundred or so miles, there are always band openings on VHF and UHF bands. No code hams can use any ham band above 30 Mhz, with full operating privileges. That's a heck of a lot more than you can do on the freeband, no matter how much you disdain it.

: then the "real answer" should come from sources that
: better represent the mainstream majority of many hams. Not from "some
: guy named skipp who says he's a ham and that hams run illegal high
: power all the time". That's how CB Myths get started.
: -Aaron-

First off, anyone with a receiver and common sense could hear and figure
out the answers pretty quick. I referenced the popular hf bands as a
practical answer... you provide nothing but off topic poop and
diversions in your answers. People have to waste a lot of time to get
through your diatribe.

Being an amatuer radio or cb operator is not a requirement to know the
facts. It also has nothing to do with being a myths as I can and do
support what I write. You have a serious credibility issue when you
don't even use your real name, some joke of a fake Aaron name instead.

I know a heck of a lot of hams and cb operators... I'd be willing to
throw out the statement that a relatively small percentage actually have
first hand knowledge of actual high powered amplifier operations... both
in actual use and how to build or operate them. But there are many hams
that do... the original post asked about "many," but you seem divert

off topic so much.

Facts:

There are many CB'ers and Hams running large amplifiers.

There are many Hams and CB'ers that run power in excess of the legal limit. (the original topic question..)

Many Hams run over the authorized limit without knowing their legal amplifiers do said when driven with common off the shelf amatuer radios.

Many CB'ers run amplifiers, operation in the US is not legal for class D.

There are adjacent non Class D CB FCC licensed allocations which allow operation using 10 dB+ (compared to CB 5 watt level) power levels. Those licenses can be easily referenced at the www.fcc.gov web site. There are many allocations for high powered operations within the 26 to 50 Mhz range...

Many Amateurs run power in excess of the legal limit, some just above... some in gross excess.

The Amateurs or CB'ers who are most often cited by the fcc; draw attention to their operations with poor on-air practice. That might be technical or personality issues.

All the above statements are easily verified, one does not have to be a ham or cb operator to do so. A little common sense home work is not hard to do. It is not a requirement that you research only amateur radio operator opinions. Most hams do not run large amplifiers as a general rule, there are many that do.

> that.

And your whole position is predicated (another word for your vocabulary)
on the fact that you are free to ignore the law, until you get cited
because the first offense is usually a warning. After the "warning" do
you now take the law seriously, or do you continue in your irresponsible
defiance?

: Dave Hall <nojunk_n3cvj@worldlynx.net> wrote:
: I would also like to see his data supporting the allegation that "many"
: (And what number qualifies as "many") hams run illegal power.

One would not "see" the data unless you had test equipment set up... but one could easily hear the data. Try the 15 through 80 meter ham bands most any day. Listen for DX pile ups and contests, then the classic group of people jamming each other out. I can easily hear them most every day. A little common sense and a calibrated S-Meter are excellent indicators of excessive power operation.

You have to be your own judge of what "many" is to a number of people. I'll throw out the wild-card number that more than 25 for a starter. Although I know first hand that number to be a very low estimate.

: Since doubling power results in a signal improvement of only 3 db, it
: would be difficult to identify a ham running illegal power until he was
: running power that is way over the limit (15KW or more).

Not true... even an S-Meter gives a relative indication of excessive power. Once your over the limit, your over the limit. Operation from a typical transceiver level of 100 watts plus 20 dB from an amplifier is a significant signal increase.

: Most ham
: amplifiers, while capable of running at twice legal power, would never
: be able to support the power necessary to be noticed by casual
: listeners. The few guys that go out of their way to obtain an amp
: capable of 15 KW plus, are certainly in the minority, but I'm sure it
: does happen.

Most hams are not capable of running twice the legal power... a small percentage have large amplifiers which have 8 to 13 dB of gain. Many... ie as in a significant number build and operate amplifiers of >13 dB of gain. I guess the hundreds members of the list server group I frequent are "just a few." Web sites abound with pictures of these well built amplifiers. You guys haven't been it the real world for some time... get off the decafe..

: Ham's are, afterall, only human. Much of the same character flaws that
: make some CBer's bend or break the rules, are also present in many hams
: as well.

Building an amplifier for > +13 dB operation is legal, using it above the authorized limits is not. Both are done by many hams and cbers. If you guys want to act like it doesn't happen, thats your choice... but it doesn't hide the truth. Kind of like the US drug war.

: But the point is, what IS the point? Does the fact that *some* hams
: break the rules, make it ok for *some* Cbers to break the rules? That's
: hardly justification in my book. I only know what *I* run. I don't run
: any more than 120 watts on HF and no more than 200 on VHF.
: Dave
: "Sandbagger"

Most of the people I know running large amplifiers, don't use them very much. Many hams and non hams take great pride in building large amplifiers at various frequencies. Some of the amps members build mega watt amplifiers for non amateur applications. All the topics are covered in these list server groups over time.

Even the truth comes out if you can wade through the off topic BS.

Many hams run large amplifiers for practical reasons, often to get over jammers and interference. Adjustment of one level /knob makes them legal...

Life is uncertain, eat dessert first...

How many reasons are there then? You either don't want one, or can't get one. Not being able to get one is obvious enough. But not wanting one, when you enjoy a radio hobby, indicates a personal or political issue. It is not logical to not avail yourself of all available options, if you truly enjoy a radio hobby.

No one steps on me. Most of those types are too stupid to figure out the ways around their own kind. Besides, they're YOUR neighbors, not mine.

Skipp how can you say by listening if it is a beam antenna or a amplifier
providing the 10-20 db signal increase? The ear cannot discern such small
db changes

If you read a thread in this NG they say someone running 4 watts in DX land
can over power a local also running the same 4 watts because of "conditions"
perhaps you can either debunk that myth as well.

Subject: message for all

Fury over a message board is not really something new, but this time its serious. Formerly an advertising group under the label of Birkdale, the company leapt into the e-market along with the rest of the world, much to the post-boom chagrin of private investors.
This ire is common, but 10 Group has called the bluff of a regular platform for the venting of such anger: investment discussion boards where scurrilous musings, as well as genuine information, are commonplace. The company has identified 11 posters on the ADVFN.com message board as having posted defamatory comments and is pursuing legal action against them.
The companys bid is an intriguing one for it deals with both the lifeblood and weakness of the internet: the freedom of speech and information that can only be provided by its nature as a vehicle for apparently anonymous expression.
Shielded by an illusory cloak of invisibility, internet users feel they can say what they want, for better or for worse. It is an illusion of which, as internet journalists, we have to be constantly aware. But it is also the best of the internet since free expression, more often than not, produces free thinking and genuinely new ideas - as well as valuable connections between a diverse population of users.
However, the web has matured and its original status as the new CB Radio clearly no longer applies. Its proliferation and value is such that thoughts of free speech must be diluted by the sheer potential readership any post can generate Claire Swires difficulties teach us a valuable lesson.
The posters on ADVFN invariably discuss freely their thoughts about businesses, particularly e-businesses, proposing just the same opinions for which fund managers of major investment banks have also since been held to account.
However, problems arise when the less scrupulous use such boards for ulterior means. The fund managers of which we speak, as well as spread betters, can be well served by an unsupported posting - bad or good - that backs their specific share/bet position. Whether their efforts have any impact is neither clear nor particularly relevant, since as long the potential for impact exists, they must be stopped.
Many will find it easy to leap to the defence of the message board users being accused by 10 Group. But we ought to consider that slander and libel laws are there for a very good reason. They go to the heart of the tenet that a person - or business - is innocent until proven guilty. Its essentially to be hoped that the message board users are proven right - but the case should still be seen as a useful reminder of the power of the web.

BFD, so can thousands of hams and on more than one band and all by
operating within the FCC rules. When the sunspot cycle shuts down
11 meters, they will still be working DX on the lower frequencies
while you will be stuck with talking to your good buddy illegal
ops across town.

> Nocodes can't do that.

So what? Do you think the only thing to operating is DX? There are
a lot of folks who care nothing about working DX. If the nocodes
want to work DX all they have to do is upgrade and then they can
do it same as you, only legally.
You really get hung up on this nocode stuff don't you twistieboy?
Even though you turn your nose up at this class of license, at
least the nocode holders do hold a license, something you can't
seem to achieve.

Not always, I have heard stations go from 100 watts to 1000 and
hardly notice any difference in signal strength, but on the other
hand, I have had a station running low power go from a dipole to a
beam and the signal increase was dramatic. So just because you see
a big reading on your s-meter tells you nothing about the power
level the other station is running.

Easily guess...probably...accurate assumptions. You're right, it
isn't rocket science, it isn't even science. Using the s-metre is
pure conjecture. How can you have an accurate assumption? Isn't
that one of them epoxy morons?
>

Skipp nothanksforspam@hotmail.com wrote:
>
>Facts:

Really? "Facts"? OK.....

>There are many CB'ers and Hams running large amplifiers.

How many?10? 100? 1000? What are "large amplifiers". What power levels? 1500 watts, 15,000 watts? What is your source for this data? What was the method of collecting data? What frequencies were they using? What were the ham callsigns being used? (These are "facts" right? Then you'll have the data handy)

>There are many Hams and CB'ers that run power in excess of the legal
>limit. (the original topic question..)

How many hams? How many CBers? 10? 100? 1000? What was the method of collecting this data? Were power levels over 1500 W PEP personally measured by you? What was the instrumentation used? What was the method of collecting this data? What are the geographic locations represented by your data?

>Many Hams run over the authorized limit without knowing their legal
>amplifiers do said when driven with common off the shelf amatuer
>radios.

How many hams? 10? 10,000? 100,000? What was the method of collecting this data? What were the measurements? How many ran 20% over the authorized limit vs how many ran 100% over the authorized limit? Who did the measurements? How were the measurements verified? What were the callsigns of the hams who participated in the measurements?

>Many CB'ers run amplifiers, operation in the US is not legal for
class D.

Thanks, but everyone knows that amps on CB are illegal. Since you know the number of hams who exceed the legal limit, do you also have similar estimates of illegal operation for unlicensed CB'ers? 100? 1000? 100,000?

>There are adjacent non Class D CB FCC licensed allocations
>which allow
>operation using 10 dB+ (compared to CB 5 watt level) power levels.
>Those licenses can be easily referenced at the www.fcc.gov web site.
>There are many allocations for high powered operations within the 26
>to 50 Mhz range...

If this data is in front of you it should be simple for you to post a sampling of the licensees in that segment and their relative power levels. If your data is correct, it certainly isn't a justification for unlicensed CB'ers using amplifiers. And what does this have to do with hams running in excess of the legal limit?

>Many Amateurs run power in excess of the legal limit, some just above...
>some in gross excess.

How many hams were measured? What were the power levels by percentage? Did you personally make the measurements? What instrumentation did you use to make the measurements? What were typical power levels per 100 hams observed? How much power is "slightly" over the limit? 1600 watts PEP? How much power is "in excess"? 2500 watts PEP? How much power is on "gross excess"? 5000 watss PEP? How many ran "slightly over the limit"? How many ran "in excess"? How many ran in "gross excess"? What conditions were these measurements made under? What parts of the country were these measurements made in? What states? What bands? What time of day? What were the test conditions? (These are "facts" right? You have this data available for verification, yes?)

>The Amateurs or CB'ers who are most often cited by the fcc;
>draw attention to their operations with poor on-air practice.
>That might be technical or personality issues.

How many were cited for "technical" vs. "personality" issues? If you have the data in front of you, this should be an easy question to answer.

>All the above statements are easily verified, one does not have to
>be ham or cb operator to do so. A little common sense home work is not
>hard to do.

You haven't done any verification whatsoever, Skipp. You've merely dispensed a bunch of unsupported generalities as "facts". You have no data except your own subjective opinions informed by your own rather limited observations. Those are not facts. That's just "some guy named skipp in a CB newsgroup said so". LOL. That's how CB Myths get born.

You're sure it is still in calibration? And it is accurate on all
bands? If so, you have an exceptional receiver.

Source record: 140399

: JJ <radiobuff0@mailcity.net> wrote:
: And just how many rigs do you think have a calibrated s-meter?

Most Amatuer Radios have relative calibrated S-Meters... 50 or 100 uV equals S-9. The level of calibration is often mentioned in the manuals or technical spec page(s).

: Even if it is accurate on one band it won't be on other bands. You
: need a lab grade receiver to have accurate s-meter calibration on
: different bands.

Not if its checked against a known reference. Ham clubs and technical group meetings often find one member bringing in a Communications Service Monitor to check radios and various home brew circuits. Preamps are a favorite project of the local weak signal group I know.

: Your s-meter is the least indicator of excessive power operation.
: I have had stations running 100 watts pin my s-meter from great
: distances.

But if you set your set meter up correct, add some attenuation and compare it to a known signal, relative levels can be seen. It's not rocket science... a lot easier than you would imagine.

Two stations in the same general location can be compared if the equipment of one station is known. One ham running full legal input to a good antenna from LA should be equal to or above an nearby ham. In the real world, you can easily see who's running the suds.

An S-Meter is just a possible relative measuring tool the average joe could learn to use based on experience. Beats driving to the guys house with test equipment... especially when they are across the State...

: Band conditions can cause s-meter reading all over the place. A
: station running 100 watts can pin your meter while another station
: running 2000 watts may just slightly make it move. It all depends
: on the skip and band conditions between you and the other

Add signal padding (attenuation) and compare two stations in the same general area. Over the average, you'll get an idea a station is up to. It's a night and day difference comparing 100 watts to 2000 watts. The difference is easily seen and heard. Band conditions are not ultra critical to averaged relative S-Meter measurements.

: stations. The s-meter is only a relative indication, you can no
: more tell how much power a station is running by the s-meter than
: you can by just listening to the signal.

But you can compare them to references... ie other known nearby stations. It's done all the time, I can cite the 40 meter band on the US West Coast as a great example...

Even during band changes, I can easily hear (and see) stations at the 100 watt level along with large-gas (high power) stations on the band. The difference in signal level is quite dramatic... I could also compare and estimate the power level of two same area stations when the known tells me he's at the legal limit into a dipole and the other station is +3 or +6 dB above that from across town of the refernce station. It doesn't take much magic to know the real story....

One last thing, many high powered operators... both CB and Amatuer can't wait to tell you they are "running big gas." An extra 15 minutes listening in the receive mode will probably result in bragging operator syndrome.

cheers

That's pretty funny... demonseed.compton... I need a chuckle once in a while.

: Skipp how can you say by listening if it is a beam antenna or a amplifier
: providing the 10-20 db signal increase? The ear cannot discern such small
: db changes

In the amateur world, most hams will say what type of antenna they have in operation. It is uncommon to run beam antennas on 160, 40 and 80 meters from physical size. Both CB'ers and Hams dont often have a problem telling you what type of antenna they are using.

Again, compared to a known... a reference power in the same general area with a known antenna, the math is pretty straight forward.

I was not using my ear for small signal changes... but I know a station running dipole and the legal limit should not be -6 dB from another operator across town using similar antennas. A little common sense works with experience and an S-Meter. Real test equipment is even better...

: If you read a thread in this NG they say someone running 4 watts in DX land
: can over power a local also running the same 4 watts because of "conditions"
: perhaps you can either debunk that myth as well.

I don't know who "they" are... but if you go back and look at my statements to see "average" and relative comparisons.

If two stations in "DX Land" talk to you from the same relative location, one running 4 watts and another running 400 watts. Unless there is some real wildcard in the mix, the 400 watt signal will be +10dB louder. Even with the 4 watt signal through a beam, the 400 watt signal will probably be louder from the same location.

So you can easily hear and see the 400 watt station is in excess of the 4 watt level.

Now expand that to the amateur bands where similar location stations operate, one or more at the legal limit (or a known power level), the compared station on the average is +6 dB above that in signal and he tells you he's running a dipole and a homebrew amplifier. Average the conversation over time and you'll get to know who's naughty and who's nice. The home brew amplifier is probably an easy +3 dB above the legal limit station... Often they might tell you the tube(s) in operation... you can make your own judgements from that point.

chow for now

Look at the full page and 2 page National Radio Institute
(NRI) adds in old Popular Electronics and Electronics
Illustrated magazines from the 60's and 70's. (might be in
some old issues of Mechanics Illustrated also)

One of them was posed standing in front of his D&A truck as
a perfect example of an NRI graduate success story!

> I wonder if anyone has a website devoted to this story... Heck, I

I have 3 Pearce Simpson Guardan 23 for sale. All 3 work.
Have 2 power cords and 1 hand mic. They need to be cleaned
up. They have been sitting in the closet for years. One of them
will clean up and look NEW, it came from a Chevy Dealer and
was used when the Part's runner was chasing parts. I checked
them and they all work, transmit & receive.
Also have 2 mobile brackets.

$75.00 plus shipping.

: Uncle Charlie <timnebo@aol.com357> wrote:
: if you and your friend are 15 miles apart and both are running only 4 watts ans
: putting s4 on each other and a 4 watt signal from dx land comes in and puts a
: higher than s4 signal then you would have just experienced first hand what your
: asking him to explain but since your stupid you wouldnt realize what was going
: on even if it did happen

If you and your friend are talking to a few stations from the same DX Land location and one is running 4 watts into a beam, his friend across town (in DX land) is 10 dB louder, you can pretty easily guess that even with a high gain beam, the 10+ dB louder guy is probably running gas. If you reference the legal limit as 4 watts, you should be able to assume the guy in the same DX Land area with a +10 dB signal is running gas, well above the legal limit. If his friend across town tells you what antenna he's running, you could even make more accurate assumptions.

Again, it's not rocket science... there are some requirements, they are experience, knowlege and some generalized assumptions. You get some of the mentioned by asking questions and reading the reply followup posts.

One must then sift through the Boobner and various Lapdog poop to read opinions and facts. Some answers are smoke and mirrors... some of it is good information. Be your own judge... don't march to the drum.

This was taken from the online edition of the San Gabriel Valley Tribune
at
http://www.SGVTribune.com

Amateur ham radio operators last link in chain
By Jason Kosareff, Staff Writer
Ira Bornstein is at the center of a communications system that could be
the only link between Los Angeles County communities ripped apart by a
major disaster.
It's not e-mail, nor cellular phone technology, nor even satellite
television.
Breaker, breaker it's amateur ham radio.
This last line of communication if all other forms are wiped out in a
disaster is manned by volunteers.
"They're a group of amateur radio operators," said Bornstein, a Los
Angeles County sheriff's deputy. "They donate their time and equipment
for portable use."
About 2,000 volunteers make up the county's Disaster Communications
Service forming a formidable network of amateur radio operators who can
mobilize in the event of a major disaster to coordinate firefighters and
law enforcement.
And that's just to back up the massive communications system already in
place.
"Back in the 1950s, they truly were a backup," Bornstein said. "The
sheriff's radio system could fail."
But times have changed and the system has expanded with radio signal
repeaters from Mount Disappointment above Altadena to the canyons of
Malibu six in all.
"This radio system the sheriff has is monumental," Bornstein said. "I
have faith in this system."
Unlike New York, where city firefighters had radio repeaters atop the
World Trade Towers, Los Angeles has its communications network spread
out, making it a difficult target.
Repeaters bounce a radio signal from its source to its target.
"That's how we get such distances from these small, hand-held radios,"
Bornstein said.
When the towers were coming down, warnings to firefighters didn't make
it to their handheld radios, since the mechanism for transmitting the
signal was crumbling with the buildings.
New York's system worked for a five-alarm fire, but not when the city
infrastructure itself was destroyed.
Things are different in Los Angeles County.
"One of the problems I saw with New York was their emergency operations
center was in one of the buildings that was hit," said Steve Grudzinski,

a volunteer radio operator from Hacienda Heights.
Grudzinski, deputy chief communications officer for DCS, coordinates the volunteers who would spring into action by showing up at local police and fire stations to act as message carriers using their ham radios.
"Our service supplements the communications of the rest of the system," he said. "It's difficult for the fire department to talk to the sheriff's department."
Grudzinski's crew of amateur radio operators has been called out on emergencies, such as a blacked-out hospital in Glendale.
In that case, DCS amateur radio operators were used to communicate between floors of the hospital, carrying messages that would have otherwise been transmitted by telephone.
Amateur radio operators often use their devices to call in fires and other emergencies, acting as many extra sets of eyes for law enforcement and fire authorities, Bornstein said.
The Red Cross also has a network of amateur ham radio operators that coordinate with DCS radio operators in a disaster response plan fostered by both organizations.
Red Cross radio operators would direct the traffic of aid to mass casualties or disaster scenes, said Dave Heywood, a ham radio operator with the Rio Hondo chapter of the Red Cross.
"There will be somebody at a shelter, or shelters, there's radios on vehicles delivering food and other resources," said Heywood, of Whittier. "Then you have your damage assessment team, which could be from one team to thousands."
-- Jason Kosareff can be reached at (626) 962-8811, Ext. 2717, or by e-mail at jason.kosareff@sgvn.com.
----------As the public-at-large say, "Breaker breaker, this is amateur radio!"

:>Facts:
: Really? "Facts"? OK.....
:>There are many CB'ers and Hams running large amplifiers.

: How many?10? 100? 1000? What are "large amplifiers". What power
: levels? 1500 watts, 15,000 watts? What is your source for this data?

I would venture to say in excess of 100, probably large multiples of that that number.

What is large amplifier to me is not what is a large amplifier to others. The original question (before you went off topic) related to the legal Amateur Amplifer limit. Many of the current legal consumer made Amateur Amplifiers will exceed the allowed limit with the drive from many stock tranceivers. So the fact is that much factory produced equipment will output power well above the legal limit as sold new.

I even introduce the fact that there are groups of people who build really large amplifiers. Some operate them within legal parameters, some do not.

The source for the CB data is found by turning on a receiver to the CB and freeband range... say 26.5 to 28.0 Mhz.

The ham stuff I mentioned is from first hand knowledge... one can find much of it on the web by searching through references I mentioned in early posts. One can find and verify the facts by using a simple receiver, some common sense and experience. I would also suggest they not listen to your BS.

: What was the method of collecting data? What frequencies were they
: using? What were the ham callsigns being used? (These are "facts"
: right? Then you'll have the data handy)

Getting a little thin for you mr boobner..? Your grasping at nothing before you dance and sing about my not posting specific answers to your stupid post statements above. I hope the original post person can get by your head in the sand (and BS) reply to be his/or her own judge.

:>There are many Hams and CB'ers that run power in excess of the legal
:>limit. (the original topic question..)

: How many hams? How many CBers? 10? 100? 1000? What was the method of
: collecting this data? Were power levels over 1500 W PEP personally
: measured by you? What was the instrumentation used? What was the
: method of collecting this data? What are the geographic locations
: represented by your data?

Oh... lets see here... specific answers to your stupid questions at least one time.

Hams in excess of the number 200 that I have first hand knowlege of. Many are good friends of mine spread through out the world. CB'ers..? Oh, I'd be willing to say more than... 200 just for your answer. Hope that's enough to make you happy. Various methods and experience were used to base my statements. A calibrated S-meter is one easily reproduced method to make a comparison. My transceiver has one as most do...

Power levels well in excess of 2000 watts were clearly demonstrated to many of us in a well known web group. I've mentioned it before right on rec.radio.cb

These people chime in from all over the world...

:>Many Hams run over the authorized limit without knowing their legal
:>amplifiers do said when driven with common off the shelf amatuer
:>radios.

: How many hams? 10? 10,000? 100,000? What was the method of collecting
: this data? What were the measurements? How many ran 20% over the
: authorized limit vs how many ran 100% over the authorized limit? Who
: did the measurements? How were the measurements verified? What were
: the callsigns of the hams who participated in the measurements?

Enough of your poop, I'm done with your stupid follow up post questions. You go round and round with your head buried somewhere. Opinions vary about the location of your head.

:>Many CB'ers run amplifiers, operation in the US is not legal for
: class D.

: Thanks, but everyone knows that amps on CB are illegal. Since you know
: the number of hams who exceed the legal limit, do you also have
: similar estimates of illegal operation for unlicensed CB'ers? 100?
: 1000? 100,000?

In specific, in the US for class D CB. The original post was about Amateurs... get your own CB numbers by turning on a receiver... Let me be generous and say there are more than 1000 illegal CB stations throughout the world. If you care to dispute that, give us your data, method of collecting said... etc, etc.

:>There are adjacent non Class D CB FCC licensed allocations
:>which allow
:>operation using 10 dB+ (compared to CB 5 watt level) power levels.
:>Those licenses can be easily referenced at the www.fcc.gov web site.
:>There are many allocations for high powered operations within the 26
:>to 50 Mhz range...

: If this data is in front of you it should be simple for you to post a
: sampling of the licensees in that segment and their relative power

I gave the source information reference.... www.fcc.gov see the original above text.

: levels. If your data is correct, it certainly isn't a justification
: for unlicensed CB'ers using amplifiers. And what does this have to do
: with hams running in excess of the legal limit?

My statement qualifies the fact that amplifiers can be used around the CB band in legal licensed applications. There are many easily found applications at the fcc web page. In the past, all you did was spout BS that amplifiers in the 26 to 54 range are not legal when in fact there are allocations where their use is...

:>Many Amateurs run power in excess of the legal limit, some just
: above...
:>some in gross excess.

: How many hams were measured? What were the power levels by percentage?
: Did you personally make the measurements? What instrumentation did you
: use to make the measurements? What were typical power levels per 100
: hams observed? How much power is "slightly" over the limit? 1600 watts
: PEP? How much power is "in excess"? 2500 watts PEP? How much power is
: on "gross excess"? 5000 watss PEP? How many ran "slightly over the
: limit"? How many ran "in excess"? How many ran in "gross excess"? What
: conditions were these measurements made under? What parts of the
: country were these measurements made in? What states? What bands? What
: time of day? What were the test conditions? (These are "facts" right?
: You have this data available for verification, yes?)

You going to repeat your same poop each post you make..? Forget it bozo, consider yourself a winner and believe we've also won the drug war.

I hope the readers see through your fake name, your stupid posts and figure for themselves that you and your lapdogs are a real waste of time.

:>The Amateurs or CB'ers who are most often cited by the fcc;
:>draw attention to their operations with poor on-air practice.
:>That might be technical or personality issues.

: How many were cited for "technical" vs. "personality" issues? If you
: have the data in front of you, this should be an easy question to
: answer.

I would refernce the Amateur Magazine QST for examples, there are often enforcement bullitins from the FCC posted at various web locations. Do you own homework and quit wasting our time.

:>All the above statements are easily verified, one does not have to
:>be ham or cb operator to do so. A little common sense home work is not
:>hard to do.

: You haven't done any verification whatsoever, Skipp. You've merely
: dispensed a bunch of unsupported generalities as "facts". You have no
: data except your own subjective opinions informed by your own rather
: limited observations. Those are not facts. That's just "some guy named

: skipp in a CB newsgroup said so". LOL. That's how CB Myths get born.
: -Aaron-

One thing is fact, you use a fake name... clearly show in your posts that you have little actual technical and hands on experience. if people can get past your diatribe pile of BS, they can find the truth out for themselves with minor effort. Effort that is not much work...

Oh, just count the number of letters they send out to hammies for violations. It's in the THOUSANDS. Don't ask me to do your homework, you'll be pegged as lazy as Lelnad. You're a hammie...you know where to get the info. According to the Hypocrite Hall, they are all federal criminals.

>And all those are for running illegal power? <<

You must have missed it..... here it is again: Oh, just count the number of letters they send out to hammies for violations.
Really?
<<

One more time:
"Oh, just count the number of letters they send out to hammies for violations."

>Read the subject line, illegal power was the subject here twistieboy or did you forget?
<<

You changed the topic several times..

>To further comment that some hams do run illegal power, <<
<snip>

No need. What you say means nothing. You are blinded by rage....sorta like Lelnad KC8LDO.

>The subject was hams running illegal power,<

Maybe originally....it evolved to another lie by you concerning what is criminal. Whether these hammies are running power or nor has nothing to do with the question you have dodged almost as well as Lelnad and Frank. I claimed the FCC has on record thousands of hammies violating the law, evidenced by the warning letters sent out by the FCC. This means they were usually in some type violation. Using your Lelnad logic, they are federal criminals breaking federal laws. So every hammie that ever received a notice from the FCC for an infraction, you have labeled a criminal.
Doncha just love usenet?

> you still ignore the question. I will ask again, >are all those violations issued to hams for >running illegal power? I think if you

really >check you will find that few are. I guess if you >can't back up your claims just keep repeating >them over and over and maybe someone will >believe you.

Only I didn;t make any such claim.

> You are blinded by ignorance, sorta like >timmyboy.

At least I can be educated. You can't change the fact that you are a liar.

It is possible, with an s meter, to tell the switch between one power level to another, from a given station at any given moment.

However, it is not possible to determine the absolute power level of that station with any confidence at all.

You would have to know the absolute path loss, on that day, for that path, at that moment.
You would have to know exactly where the other station is, to even begin to figure that out.
You would have to know his antenna type, gain and pattern, and pointing direction (in all three axes)
You would have had to calibrate your antenna, feedline and receiver to a known standard.

From any appreciable distance, how can you determine the difference between 200W into a 0dB antenna, and 100W into a 3dB antenna?

The best you can do, is to say that station X is putting out a strong signal, and maybe it's unusually strong. That's why the FCC does station inspections.

In part 15 testing, at open field sites, they calibrate the receiver (not just any receiver, it has to have specific AGC charachteristics as well) and the feedlines, and the antennas. $7000 for an HP/Agilent antenna with traceable cal curve, though they also use measured dipoles, because their gain is very repeatable. All this to get within 3dB or so, at a range of maybe 50', on a known patch of ground.

: it is, and the green light comes on when charged. OR should I charge a
: battery with it apart, and check volts going to the battery at the end of
: the charge?
: It is sickening that they want us to keep buying more to support china, when
: we can fix it ourself with a Taiwan transformer that was the exact same
: size!
: Dave!

Size vs voltage value are two different things... and much of the time...
it matters.

I would be willing to guess that the peak charging voltage of a 12 volt
secondary xmfr would be enough to do the job, just at a slower rate. That
slower rate might not be all that bad in the long run.

The rapid charge of a battery really generates heat, which is bad news
when the cells get older.

A good way to measure for bad or shorted cells is with a volt meter
across a charging pack. Not easy to do if the pack is sealed. Each
charging battery should have more than .6 volts across it while charging.

If you are obtaining a green light full charge, you might be lucky enough
to have the lower voltage transformer supply enough peak dc voltage to
slower charge the battery to full capacity. Once in a while, a person
gets lucky... the slower charge might even be better for the battery vs
the brut force fast charge.

I've been working on a real world article about Zaping NiCads back that I
hope to post on the http://sonic.ucdavis.edu web server. You might check
over there in a few weeks if you have an interest in that sort of topic.

cheers

: your S-meter is smoke and mirrors.

Comparing relative signal strengths is common and done every day. S-Meters are often calibrated and a good operator might know more about their station than the brand names of equipment in use.

From your judgement call, all the receiver manufactures are wasting their time calibrating the receiver s-meter. That dB scale means nothing...

The S-Meter is just an easily available tool most people have in operation.

When the FCC rolls up in front of your house, they use a similar probable cause methods to assume the operator is operating with excessive power. I can also be done from their remote monitoring stations.

I've explained the basic methods of relative S-Meter comparisons in the previous thread posts. Use or ignore it as you please...

: to another, from a given station at any given moment.

Yes, a same station comparison... two same area stations can also be
compared.

: However, it is not possible to determine the absolute power level of that
: station with any confidence at all.

True, but you can say that X station running full legal power into a
known antenna will probalby not be 10 dB signal below a same city
station "Y"; using some assumptions or knowledge of his antenna system. In
short, station Y is running gas when his signal strenght is 10dB higher
for a similar station and location.

There are "rules to the game..."

: You would have to know the absolute path loss, on that day, for that path,
: at that moment.
: You would have to know exactly where the other station is, to even begin to
: figure that out.
: You would have to know his antenna type, gain and pattern, and pointing
: direction (in all three axes)
: You would have had to calibrate your antenna, feedline and receiver to a
: known standard.
: From any appreciable distance, how can you determine the difference between
: 200W into a 0dB antenna, and 100W into a 3dB antenna?

For these levels, its not practical... but one can easily compare stations
in similar locations running 100, 1000/2000 & say 4,000 watts. The guy
running the big gas is always much louder than the 100 watt station and
over an average, will be louder than the legal limit station in the same
area. I hear and see it almost every time I turn a receiver onto certain
war-zone amateur frequencies and much of the CB band.

: The best you can do, is to say that station X is putting out a strong
: signal, and maybe it's unusually strong. That's why the FCC does station
: inspections.

Exactly ... please repeat the above to the rest of the crowd. Would it
not be reasonable to assume Station X is well over the legal limit,
when compared to Y; certain things are known or assumed from experience,
first hand knowlege or common sense using even basic tools... ie the
common reference calibrated S-Meter.

"Unusally strong signals compared to others"

Yee... hah... someone send up fireworks at last... thank you!

: In part 15 testing, at open field sites, they calibrate the receiver (not
: just any receiver, it has to have specific AGC charachteristics as well) and
: the feedlines, and the antennas. $7000 for an HP/Agilent antenna with
: traceable cal curve, though they also use measured dipoles, because their
: gain is very repeatable. All this to get within 3dB or so, at a range of
: maybe 50', on a known patch of ground.

One can easily measure and record a receiver (& S-Meter) calibration.

Common antennas have predictable gain and radiation patterns.

Many people will tell you about their station equipment and location over
the air.

Most people can easily make simple comparisons using simple techniques,
common knowledge and experience.

Life is good again... thanks
cheers

>...which underscores the double standard by >which you are seemingly unaware of.

What irony.

>The same criteria, by which I present "what *I* >refer to" in reference to any topic, brands me a >"liar" in your book,

Different criteria. When I say something is an opinion, it clearly is visible at first galnce. I don't put something out there unless I know it to be reasonably true and am always willing to listen to an opposing view while putting my personal views to the side while refrainiing from personal off topics. You claimed you never did something, I merely pointed to a few posts that are in direct contradictory with what you were trying to claim. On top of that, you attempted not once, not twice, but three times to deliberately misattribute something to me that I never said in a deliberate and malicious fashion.

>yet when the table is turned on you, you hide >behind "It's only my opinion". Which is it then?
>Are we both liars, are are we both just stating >our opinions?

We are both entitled to our opinions without prejudice. I hesitated to call you a liar, but after deliberately trying to malign my character with repeated claims that I said something when I clearly did not,,,you left me no choice.

Try to tell a socialist that he's nuts, and he'll swear that you're crazy.

>Try being a little more original. <

I'm not good at insults, but I am great at returning things to which they came.

>I see that you took a fancy to the term >"sophomoric" which I used a few posts back, >and are now using it quite regularly.

Don't apologize. You are the second of Aarons named rec.radio.cb trouble posse who has asked me to dumb down my word usage. Frank was first.

>I can see that you are, if nothing else, >broadening your vocabulary.

Continually.

>Now if we could only work on those reasoning >skills.....

Well, if y'all try real hard, you may gain some headway.

>Yes it is, and as such, passing the test >qualifies it as an >achievement.

Maybe to people like yourself.
Here again is where your socialism rears it's ugly head.

>While we're on the subject:
>Socialism, n. "A social system, in which the >means of producing and distributing goods are >owned collectively and political power is >exercised by the whole community."
>Now, what part of that applies to anything >even remotely related to anything that I've >said?

Get a better dictionary. the first vocabulary was a freebie. Now you are acting like your posse of trouble, asking another to do the work. Lelnad often asked for that.

>I guess you feel that anyone who believes in >law and order, and does not selectively break >laws is somehow a socialist?

I can't stress it enough. Stop guessiing.

>Maybe if your parents<

None. I was born in a desert and raised in a lion's den.

> had taken some cat-o-nine tails across your >sorry butt, when you were a misbehaving child

The Seer malady has just entered the Hypocrite Hall. Please take a seat and we will close the door.

>instead of adopting the neo-liberal-hippie style >of allowing children to "express themselves", >even when those actions were bad, you might >have a greater respect for doing things the >proper way, and you wouldn't be so >anti-social.

I'm not anti-social, Dave,,,I'm anti-asshole.

You are upset

>Hardly. You still don't get it do you? You, my punch clown friend, are my entertainment. <

Won't work.
I said that of this group when I decided to stay (it's in the archives, go get it), that it was my fresh humor for the day and brightened my mornings....put me in the mood to do my job, ya' know! You claimed you were in this group way longer than me,and you are right, but I will wager you never claimed that of this group until post-twist!!!

>As of Friday, I will be done with you.<

Sure you will. I spend maybe a total of one or two weekends a year indoors, so that is when you will manifest as some other faceless sap hurling insults. Lelnad KC8LDO used to do it all the time...each and

every weekend like clockwork..

>Unless, of course, you actually have a >coherent thought, and decide to approach a >subject rationally, instead of confrontationally.

Your flawed interpretations were evident when you claimed all those hammies were federal criminals.

>Which, by the way, is more than a bunch of no >license, illegal >freebanders can claim.
>Dave
>"Sandbagger"

No, it's not actually. We can claim over 100 DX countries, with cards to prove it, on HF.
Nocodes can't do that.

>You make the erroneous assumption that DX >is the be all,

Where did I do that?
Shooooooooow me the money!!!!!!

>Personally, I find the pursuit of DX to be >pointless and boring, and conducive to >interference, a flash point for hostilities, and >generally shows the "bad" side of radio >operations.

But of course you do. It shows in your history of perpetual hard-ons for cbers. It has always been a problem in your internet incarnation.

>No one will be happier than I will be, when >cycle 23 is in the can, and CB can return to >normalcy.

Whatever limited definition you wish to apply that term.

>No code hams can legally build their own >equipment, own and operate repeaters, >operate on many modes, including modern >digital modes. And if they get the itch to talk >farther than a hundred or so miles, there are >always band openings on VHF and UHF >bands. No code hams can use any ham band >above 30 Mhz, with full operating privileges. >That's a heck of a lot more than you can do on >the freeband, no matter how much you disdain >it.

I don;t disdain the freeband at all. Slow down, Dave,,,you aren't thinking rationally.

>Dave
>"Sandbagger"
>Practicing Socialist

CB's: Mobiles - All are like new and work perfectly and include handheld microphones. No scratches or dents.

Cobra 148 GTL (AM/SSB) with built-in freq. counter: $100 firm.
Cobra 18 WX ST (AM): $40
Cobra 25 WX ST (needs power cord): $30
Maxon MCB 45 W: $30
Midland 77-120 ESP2: $35
Realistic TRC-465 (AM/SSB): $75
Shipped postpaid and insured - money order only.

Older CB mobiles:

Pace CB-143, 23-channel with microphone. Fair condition, works. $25 firm, postpaid
Royce I-600B 23-channel mobile with microphone. Fair condition, works. $25 firm, postpaid.

CB Walkie-talkies:

One PAIR of old classic Realistic 40-channel TRC-216; minus "dummy batteries." Excellent condition with manual and rubber antennas. $50 firm, postpaid and insured.

One pair of old classic TRC-206 Realistic 3-watt, 3-channel CB walkie-talkies. Excellent condition, both work. No manual. Includes one transmit 27.125 and one receive, 26.670 crystal in each unit. One is minus hand strap and both need "dummy" batteries (can still use today's NiCads). $50 firm, postpaid and insured.

Texas Ranger 696F SSB base, excellent condition, no scratches, in original box with manual. Unmodified and has not been tampered with! $200 firm includes three-day USPS shipping. Money order only.

Uniden Washington AM/SSB base - This is a classic, OLDER UNIT - in original box, manual, bracket, microphone and has not been modified or tampered with at all. $175 firm includes three-day shipping and insured.

Cobra 2010 (replaced Cobra 2000). Excellent condition, manual, microphone. $125.

Classic Base CBs:

Uniden Washington AM/SSB base - This is a classic, OLDER UNIT - in original box, manual, bracket, microphone, no scratches and in excellent condition. I have not modified or screwdrivered the radio! Works perfectly. $200 firm, postpaid and insured.

Regency CCR-142 AM 23-channel base with handheld GC Electronics power mic. Checked out five years ago and worked. Probably needs tuning. $35 firm, postpaid.

Lafayette HE-15, 5-channel base with push-to-talk switch on CB case; needs a microphone. Checked a few years ago and worked, but probably needs tuning and switch cleaning. $40 firm, postpaid.

Lafayette HE 20A 23-channel base CB, needs original mic, but I will include a Courier CMM-1 handheld mic (minus connector). Checked a few years ago and worked, but needs tuning. $40 firm, postpaid.

Please respond to this email, N2RLL@aol.com. Thank you.

Skipp, give us their callsigns. Id like to verify the fact that these
200 people run illegal high power.

>>Many are good friends of mine spread through out the world.

OK, I'm willing to email a random sampling of them and ask them to
verify the "facts" that you are posting in RRCB. How about their
callsigns? You can email them to me. Email them to JJ too.

>> CB'ers..? Oh, Id
>> be willing to say more than... 200 just for your answer.

Skipp, that doesn't sound like "facts". That sounds like you have made
up an arbitrary number. How can we take what you say as factual if you
are going to offer guesstimates?

>> Hope that's
>> enough to make you happy. Various methods and experience
>> were used to
>> base my statements.

"Various methods and experience" is a bit vague, doncha think? That's
like citing "reliable sources" as evidence of government conspiracy,
LOL.

>> A calibrated S-meter is one easily reproduced method
>> to make a comparison. My transceiver has one as most do...
>
>You're sure it is still in calibration? And it is accurate on all
>bands? If so, you have an exceptional receiver.

I'll add to what JJ said and ask that along with the S-meter readings,
I'd like to see a list of times of day, frequencies, and names of your
200 friends to verify that they were indeed running illegal power.
Since these are "facts", the info should be easy to provide.

>> Power levels well in excess of 2000 watts were clearly
>>demonstrated to
>> many of us in a well known web group.

Uh-huh, this web group is so "well known" that I've never heard of it.
So what's the name of it? The 2000 watt + demo was done on the air?

What frequency? What was the callsign of the operator so we can verify this?

> >I've mentioned it before right on
>> rec.radio.cb

>He is asking you to verify what you claim with some believable
>numbers. Can you?

It looks like his method of verifying his "facts" consists mostly of hurling insults at me. LOL.

>> I would refernce the Amateur Magazine QST for examples,
>> there are often
>> enforcement bullitins from the FCC posted at various web locations.
> >Do you own homework and quit wasting our time.
>
>Ah, that's it, put the onus on someone else to prove or disprove
>YOUR claims.

JJ, I think he wants us to "do our own homework". Maybe skipp is too busy to verify his own claims. As mentioned previously, I'll do it for him. I'll contact a random sampling of the 200 close friends he claimed who run illegal high power and ask them to verify this fact. I will cc the group on responses. We get the truth and skipp doesn't have to lift a finger. It's a win-win situation.

Sounds like a >FEDERAL crime to me..... But I guess you >still feel that "Rabbit Ears" is not a "criminal".

Your guessing is aghast and never correct.

Were we talking about Rabbit Ears? No.

>Yes. I was.<

No, you weren't.
You entered him into the equation yet at the same time took issue with me for mentioning the hammies you called federal criminals because they were not ALL running power,as if that had anything at all to do with thembreaking what you say is FEDERAL LAW
which makes them FEDERAL CRIMINALS.
What's good for the goose......

> He's a shining example of an outlaw mentality >gone horribly wrong.

And you're a blackeye to hammie radio.

>You might be a few pegs up the ladder from >him, but you're just as guilty of breaking >federal law.

Am I as guilty as the hammies in the rain report each week? They are federal criminals by your logic, are they not?

We don't do what Rabbit Ears did.

>Who is "we"? <

Wait a sec..you just said in aother post "So *WE* don't think you're a blooming idiot."
I love talking to you when you're drunk, Dave...your hypocrisy comes shining through brilliantly.

>Are you speaking for all radio outlaws again >here?

When I said "we". I referred to freebanders , an in they do not, for the most part act like Rabbit Ears, as most hammies do not act like the jerkoff hammie that was popped for messing with emergency ccommunciations. Are youspeaking for all hammies when you say breaking

federal radio rules makes you a criminal? Are you speaking for all hammies when you each one that received a letter from the FCC for an infraction is a federal criminal?

>I guess "Rabbit ears" didn't hear you.

Hear me what?

If you wish
to make that analogy and keep comparing simple freebanding between 10 and 11 and some DXing to the antics of Rabbit Ears, then the same can be drawn from the clown hammie in California that got his kicks messing with the cops and emergency freqs....

>All guilty of breaking federal law.

...to your indiscretions.

>Which are? <

The repeated lies were enough for one week. More in due time if you wanna play, but I strongly urge you to take your admitted personal grudge with me to email so as not to subject the group to anymore of your enjoyment you get by using the group as your personal tool to "yank: my chain. It really hurts hammie radio to see a grown man that uses his call in his sig act as such.

And that would have what remote connection to a simple freebander getting a warning letter for the first, second, maybe third time? And have you EVER found a cber guilty of the "Federal Crime" you say exists of DXing?

>Still living by the old "it's only illegal if I'm >caught" mentality.

It's not a mentality, it's a reality.

>By that logic, that sniper, who's terrorizing the >mid-atlantic area, will not technically be a >"criminal" until we finally catch him eh?

By any logic, you were shorted.

The ignorance is flowing from you today isn;t it? Speeding can directly kill an innocent and has done so in the past. Freebanding between 11 and 10 meters hasn't.

>And the former CEO's of companies like >Enron and IMclone will be getting fines and jail >time for "only" falsifying company accounts >and misstating earnings. No one died here >either. So much for your (il)logic.

And Kevin Mitnick is getting his hammie license back and no one died. What's the connection, or are you half into the sauce now?

>A speeding ticket won't land you a $25,000 >fine or 15 months in jail either.

Neither will simple DXing and freebanding between 10 and 11. It will get you, at the most, a warning letter the first time. Don't cause a problem and the letter is a given.

>And if you continue to operate illegally after >the "warning", what do you think will eventually >happen? "Rabbit Ears" got a "warning" too.

Rabbit ears got what he deserved.

>Too bad he, like you, doesn't take the law >seriously.

Seer malady.

>And the federal gov't doesn't issue speeding >tickets either. Let's review now shall we boys >and girls:

Can you say "patronizing?"

> Speeding ticket: Summary offence, >usually >accompanied by a fine of not
>more than $150 depending on the state, and >just how fast you were going.
>Illegal radio operation: A violation of federal >rules and regulations, >which carry with it fines into the thousands of >dollars, and possible jail time.
>Now, which would you rather have happen to >you? Dave
>"Sandbagger"

How come all these hammies aren't in jail that receive notices each week? Why aren't they all paying fines? Because what you say simply doesn't take place, these people are not federal criminals, and a warning letter is always sent first. You failed (yet again) to mention that.

>And your whole position is predicated (another >word for your vocabulary)

My, you are certainly coming along since my education of you, grasshopper. I even forced you to open a junior high level dictionary after you found the urine staned thing and sprayed it with Old Spice so you could get near it.

>on the fact that you are free to ignore the law, >until you get cited because the first offense is >usually a warning. After the "warning" do you >now take the law seriously, or do you continue >in your irresponsible defiance?
>Dave
>"Sandbagger"

You are into an entire different area.
You have sunk your ship.

Back to posts talking of nothing and making personal remarks, eh?

>It helps to gather some insight on why a >person with such a warped sense of reality, >such as yourself, thinks the way they do,

Putting aside you defending your hurling of yet more insults and making me your sole topic for posting, wouldn't what you just described be construed as spying? Why, yes, I believe it could. The gatherng of personal information...hahhahahh!

>and why they feel that they are right, even >when they are in contrast to the values of >society.

Your values are in the minority. Thehammies that have recieved letters for minor infractions from the FCC do not consider themselves criminals. Maybe youshould take this to ahmmie forum and ask them if they consder those that received letters, "Federal criminals".

>Here's some "lite" reading for anyone that >needs a little background.
>See if it fits our resident sociopath:
>http://www.mentalhealth.com/dis1/p21-pe07.ht>ml

You appear quite familiar with the field.

>Somewhat. It's only another "hobby" for me.<

Ever try work?

> But studying people with strange mental >ailments has always fascinated me.

Dogs of a feather..........

>I'm not afraid to stand by my words

Right. You deny them,

>I clarify them, and put them back into their >original context.
>Of course, I deny the distorted meanings that >you construct from >snippets of my posts taken out of context.

Another lie. Your post concerning your spying was presented in full.

> You should work for the
>democratic party. You're as slippery as the >best of them.

They can't afford me, but neither can the Republicans.

More division. At a time when the country needs to put petty political domestic issues aside more than ever and pull together, we have blooming algae like you that would prefer to further divide our united efforts.

>Tell that to the democrats,

Nah, I just told it you. Youare the one seeking division in all facets of your life.

> But don't start talking about politics.

I didn't you did and forgtot already. Lush. Hahah!

>The real joke, that you still don't get: I *AM* a >CBer!

You are the real joke, Dave, I just haven't decide to reveal all the punch lines yet or to let you in on them.

>Well, you'd better do it soon. I'm putting you >back in your cage on Friday.
>Dave
>"Sandbagger"

You're plagiarizing me again. Ive had cages for the AKC since one man gang was whoppin' up on 'em along with phone man making Dogie look like a cber with a bad case of Tourettes.

Hi Jamey, My name is Woody Parr and I'm up the road in Cornelia. I'm
afraid that I'm indirectly responsible for this troll who is
badmouthing you at alt.religion.urantiabook. You see he was only there
in the first place to attack me.

This idiot is Steven J. Rogovich, 1612 Lake Christopher dr. Virginia
Beach, Va. 23464 He followed me to the UB usenet page from

alt.radio.pirate He and I (were) both formerly loosely associated with each other in the shortwave pirate radio listening hobby. I USED to be a shortwave pirate but my station has been permanently retired for more than 2 years now. Stevie is still a pirate and is the operator of the station Radio Free Speech. He is also the moderator of a message board at the Free Radio Network < www.frn.net > and goes by the handle of Pat Murphy there. I had a falling out with the people at the FRN a couple of years ago as they became corrupt and were doing so inappropriate things. I dared to open my mouth and openly complain about there stupid activities which since they havn't yet ceased to follow me around the internet anywhere they can and attack me.

Steve is also on the usenet trolling people under the name of Richard Cranium (richardcranus@yahoo.com) He's far too much of a coward to debate anyone using his real name.

> Yes, a same station comparison... two same area stations can also be
> compared.

Sorta.
If you see a LARGE difference, then you might be able to say there's something going on outside the regulations. OTOH, one guy might have hardline into a beam, and the other guy 100' of Radio Shack RG-58 into a radio shack discone.

I actually saw an RS guy telling a customer that they could use that discone (sold without the top element) for CB. I suppose that's technically true, but it's a LOUSY antenna on 11m. It's really much better at radiating all the harmonics. :-P

It's hard to say where the blame belongs on that one. The customer should have known better, so should the RS guy.

> True, but you can say that X station running full legal power into a
> known antenna will probalby not be 10 dB signal below a same city
> station "Y"; using some assumptions or knowledge of his antenna system. In
> short, station Y is running gas when his signal strenght is 10dB higher
> for a similar station and location.

Or he's a lot better with antennas :)

Back in my CB days, I used to run mobile from a '67 chrysler imperial. Robyn rig, tuned to 4.0W output (I worked in a radio repair shop at the time) I ran a firestick antenna, and added a capacity hat, and retuned the antenna to resonance. Sitting in my driveway, two blocks away, I was 3dB higher into a given station about 15 miles away, than another fellow, from his base with a Ringo Ranger up about 30'. The antenna was resonant, the feedline was low loss, and the cap hat lowered my angle of radiation considerably.

> One can easily measure and record a receiver (& S-Meter) calibration.
> Common antennas have predictable gain and radiation patterns.

True

> Many people will tell you about their station equipment and location over
> the air.

(50% BS factor though :)

> Most people can easily make simple comparisons using simple techniques,
> common knowledge and experience.

As long as we remember the limitations of simple measurements with big assumptions.

You're being mean to your batteries.
If you want them to live, never discharge below 0.9V, or 1.0V if you want the most life possible.

Wrong answer.....Nicads should be FULLY drained. Some people even keep a small light bulb such as an 1156 auto bulb across the terminals to keep them discharged. Batteries have a "memory" to them and need to be FULLY charged and DISCHARGED as well. Ask anyone who races electric RC cars and they will tell you the same thing.

> than the brand names of equipment in use.

And s-meters even after being calibrated, and that is on one band,
are often incorrect after a time as components age. And you would
be hard pressed to find the typical ham rig where the s-meter is
accurate on all bands.

>
> From your judgement call, all the receiver manufactures are wasting their
> time calibrating the receiver s-meter. That dB scale means nothing...

Actually correct, as most if not all s-meters in the typical ham
rig are not calibrated accurately on all bands. Set up 10
identical rigs such that you can switch an antenna to each rig
tuned to a signal and you the chances are great (almost assured)
that all will not give the same s-meter reading. You are putting
too much stock in an s-meter that is used for relative signal
strength readings...the key word is relative.

With much more sophisticated equipment than an s-meter on a
typical ham rig.

Yes, did that years ago... worked only fair. CB radio frequencies don't pass through solid objects well and the losses are heavy. I had a 1/4 wave ground plane I fabricated from antenna grounding wire up there. Don't get me wrong... it does work... but don't expect the same performance as if the antenna would be outdoors in "free space".

news:CFN375445417853009@news.wt.net...
I was wondering if anybody had advice on putting a
antenna
in a attic. Not sure how good this would work or what kind of antenna would
be
the best to use. I have been using a no-ground antenna on my apt's balcony
and
that worked "ok" how would that work inside a attic? also how much will the A/C ducts interfere with this as they are metalic. As this is a brand new house I would rather not put any holes in the roof or drill holes anywhere outside it to attach anything yet.

thanks for any advice
spj67@eudoramail.com

So you are going to have all this information on some station you
hear on the air that is 50db over s-9 which convinces you he is
over the legal power limit, because your s-meter says so.

>

So your s-meter tells you what type of antenna each station is
running. Maybe the strongest station which is running the lowest

power is using a beam and the weaker station running more power is
using a dipole.

Let's see you send a letter to the FCC about some ham you know is
running excess power because your s-meter says so and see how hard
they laugh.

Yep, someone using a vertical with a lower angle of radiation
running 100 watts may put in a signal stronger that another
station in the same location running 1000 watts and a beam, or
vice versa. There are two many factors that affect signal strength
to use an s-meter to determine who is running how much power. It
is silly assumptions at best.

I am curious too, what is this well known web group?

I have had stations from both the east and west coasts sometimes
pin my s-meter. I guess I should have turned them in for running
power in excess of the legal limit. Never mind band conditions.

That's my main problem Brian. The identifier on the cable doesn't match anything I can find on the web. To be honest I have not tried to call them yet or done any extensive searching since my second post. Had too much fun with the radio last night and forgot all about doing another search.

I just double checked the jacket. For the 20 feet of Coax I looked at printed about every 4 inches is this:

BELDEN RG8U KX .. ..

This is exactly as it is shown on the jacket (DISCLAIMER: when I say exactly I don't really mean exactly)

The dots are in the middle of the jacket and the series is 2 2 5 4 10. Checked along a bit of the jacket and it is like this every where. I'm sure the dots mean nothing, they just struck me as odd. I suppose it really doesn't matter, I was just curious what the specs on this stuff were and if I could expect it to last when I run it up my mast. I suppose it's also good to know if it is "good" coax for my situation.

the smallest radio that I know of.. was made by either Cobra or Maxon.
All the controls in the mic head, including the receive speaker., the
rest mounts under the dash or under the seat.

You don't need a code ticket to talk around the world just get on IRLP and you are world wide from a hand-held 27-7-365. Try that with a CB.

"Twistedhed" <twistedhed@webtv.net> wrote in message news:14897-3DAAAE2D-913@storefull-2316.public.lawson.webtv.net...

Maybe it would be smart to get your Ham Ticket FM is better then AM , get a 10 dollar book at radio shack and study and get your license and talk around the world after getting your code, just a thought .. 11 meters is out of date
-

Really? As a nocode, you haven't experienced all of what hammie radio has to offer, so one could reasonably expect you to not know which service is older, as the "node" exam requires virtually no knowledge concerning hammie radio, theory, nor it's history. You may want to consider an upgrade.

Hey TRA1N,

I thought the memory effect had been debunked as a myth. I might be thinking about Nickel Metal Hydride (sp?) or Nickel Cadmium (sp?) Shesh my spelling and memory are trash tonight. I also thought that along with the "memory effect" that fully discharging these batteries was a no-no. Are you just working off your memory or do you have a source handy for this info? I should add this is not an attack I am just curious if you had a source handy or if I should look it up for my self.

Dave

Sorry, but that's the RIGHT answer.
Just because a bunch of people do it, dosen't make it right.

Among other things, I design NICAD and NIMH chargers for a living.
See McGraw Hill's handbook of batteries, chapter 29, or any NIMH or NICAD
cell manufacturer's technical data.

"memory effect" is almost totally a myth as well. It was only ever seen in
special cells designed for sattelite use, and only when the depth of each
cycle was held within 4% (like a sattelite in orbit going behind the earth).
It was hard to get it to show up, even under those circumstances.

When you deep discharge a pack, you reverse charge the weakest cell.
Reverse charging is very bad for them. You are forcing them into premature
failure.

It is a myth in consumer cells.
Charge depression in NIMH cells is very real, caused by leaving them on
nicad trickle chargers for prolonged periods. NIMH dosen't like the NICAD
c/10 trickle. It wants more like C/300.

I might be thinking

Tut tut....that is selective practice of the good will you allegedly preach,,,mighty hypocritical of you to claim for another to practice one thing but you have difficulty practicing what you preach..you now have entered the "Hypocrite Hall, of Lelnad C. Scott Kc8LDO, Frank Gilliliand, N8WWM Dogie Adair.
It holds perfectly well with what you put forward about morals and what not. Opposing views shouldn't make you act like that, Hall. It doesn't fit with jibe your mental health hobby (stifling a hysterical roar) !!
The mere notion that you derive pleasure from trolling a cb board and "yanking" the "chain" of someone

>Not "someone", YOU. <

Which makes your hypocrisy and malady even more embarrassing. You have no idea who you are attempting
but failing to argue with and your beahvior is indicative of this high esteem that hammie radio projects.

>I have a fairly good idea<

You don't have a clue.

> The fact that you respond so predictably, to >programmed stimulous,

Holy Cripe! Is that what you call it when you address me or my post? Programmed stimulous? You clown....the word would be stimuli, if you even had a clue what you were talking about. You sound like a wannabe mental health tech almost as bad as you do a socialist and wannabe dictator of radio.
just further validates my diagnosis.
Your WHAT? Let me get this right...you are claiming yourself qualified to give a diagnosis based on personal information you have NOT culled. I take back the alcohol factor. I think you are a speed freak.

>I do not treat other people with the same >distain, simply because they act appropriately,

Sure you do Dave, the archives are ful of your bullshit attacks on law abiding cbers...full of your insults, etc.
You are not the judge in what is proper. Matter of fact, you have proved you are so far removed from what is the majority that you are seriously out of touch.

>According to you.

Your posts speak for themselves. I don't have a pc, but they were catalogued by a retiree...any time you're ready to made a hypocrite and liar some more,,,say the word,,,,,

>People in mental hospitals think they're >normal too.
>I was hoping you'd start to see that, but you're >still deep in da'
>river 'nile.

Your intellect is severely inhibited by your inability to mask your agressive and hostile streaks. A simpleton that involves himself in the personal nature of others and lies with repeated insults has no where left to fall.

>with courtesy and a modicum of decorum >(Another phrase to add to your growing list of "vernacular").

Oh, your insults are becoming so....so.......sophomoric.
Give me the word, and I'll send you the >personalized certificate, with >"Sophomoric" in gold leaf.

Send it.
Your gay buddy that keeps mentioning my underwear, Lelnad KC8LDO can give you some poor bastards addy he thinks is mine. Thats what he gets for listening to Frank.

>Time's running short.

Well, when you have time, run and see the whopper lie you just told and see
how I treated you vs how you treated me when I enetered the room. Look who began huring insults and not practicing an ounce of "decorum" .

>I don't expect you to agree. But it was you who >adopted a
>condescending tone.

It isn't about agreeing, it is reading what is there. Wanna go there? I respond in kind.

>I am just about finished with kicking the punch
>clown for now.

You're fighting with KC8LDO Lelad?

>So you'd better say something meaningful (if >you can) in the next day.

Ok, how many self-contradictory and lies do you want shared here since you tefuse to take your personal problems off the board?

>Come Friday, I will return to ignoring you, until >I feel the need to kick the punch clown again.
>Dave
>"Sandbagger"

Well, I am glad you got that off your chest. It must pain you to keep such hostilities bottled up inside like that. Perhaps you should think about spending more time with your daughter instead of posting with your alias all weekend.
You will note that I am absent over the
weekend.
I have never been here on the weekends but maybe once or twice per year, but now that you suddenly made the concsious effort to say you will be gone, I am certain you will be here. Weekend visitations suck, don't they? Shoulda gave up the booze long ago...you'd still have the marriage and the daughter.

>I spend most of my leisure time with the >people who I care the most >about.

Yea? When did you fall in love with me?

> You are merely a distraction from a busy work >day..... Dave
>"Sandbagger"

Thatwas has been played, too. You're washed up.
Besides, you couldn't spell "work" without your dictionary let alone perform it.

The paranoia is kicking in again eh? I can guarantee you, that I won't
be here at all on the weekend. But that's not what I was refering to.
You see, like a child, who takes his pet rabbit out of the cage, and
lets him run around on the floor for a while, but then has to put him
back before he leave a "pile" on the floor, I have toyed with you this
week. But in the interest in conserving bandwidth, and as a courtesy
(something that you should study) to other people, who may not
appreciate my "entertainment", I will put you back in your cage, and
return to ignoring you until I feel another need to let you out again.

>
> >Unless, of course, you actually have a >coherent thought, and decide to
> approach a >subject rationally, instead of confrontationally.
>
> Your flawed interpretations were evident when you claimed all those
> hammies were federal criminals.

While we're at it:

Criminal:
1. Of or involving crime.
2. Guilty of crime.
3. One who has committed a crime.

Now of course you will take issue with the term crime, so in
anticipation of this:

Crime:
1. An act committed or omitted in violation of the law.
2. An unjust or senseless act.

Now lets apply some logic shall we?

Is operating a radio, on frequencies not authorized by the FCC, or with power levels higher than authorized by the FCC, a violation of federal regulations (I.E. The Law)?

The answer to anyone but a sociopath would be: Yes.

Since a crime is defined as an act committed in violation of the law, the conclusion would be that operating a radio against the FCC rules would be considered a crime. Expanding that logic further, since one of the definitions of criminal is "one who commits a crime", the conclusion would be that an operator of an illegal radio station is, in fact, a criminal.

So don't take issue with me, take issue with society, and see how far it gets you.

But of course, your predictable answer will be, "Get a better dictionary", as if that would change anything.

> No, it's not actually. We can claim over 100 DX countries, with cards to
> prove it, on HF.
> Nocodes can't do that.
>
> >You make the erroneous assumption that DX >is the be all,
>
> Where did I do that?
> Shooooooooow me the money!!!!!!

Right here:
" We can claim over 100 DX countries, with cards to prove it, on HF."

The implication, (which you will convieniently deny) of course, is that DX is the litmus test by which you measure a radio service's relative worth. The fact that a No-code can't work DX, seems to be important to you, but I can assure you, it doesn't mean squat to them.

You wear your DX achievments (and I use the term loosely) like some sort of badge of honor, like it actually means something. Any idiot, with $100 to spend, and an penchant for ignoring the law could do what you do. It doesn't take any talent or discipline. That's why I grew bored with DX in the 70's.

A no-code tech, who builds his own antennas, or operates a repeater, earns more respect that a freeband DX'er.

>
> >Personally, I find the pursuit of DX to be >pointless and boring, and

> >generally shows the "bad" side of radio >operations.
>
> But of course you do. It shows in your history of perpetual hard-ons for
> cbers. It has always been a problem in your internet incarnation.

Once again, you measure CBers against that "DX" litmus. I am a CBer, and have had many, many friends over the 30+ years that I've been on CB. Most of them didn't care much for DX either, once they made the first dozen or so contacts and the thrill wore off. I have no "hard-on" (hmm, a sexual reference, what could that mean?) for Cbers. I do have a problem with those who's selfish pursuits infringe upon the rights and enjoyment of others who are trying to do their thing on CB, and are protected by part 95.

>
> >No one will be happier than I will be, when >cycle 23 is in the can,
> and CB can return to >normalcy.
>
> Whatever limited definition you wish to apply that term.

I'll make it simple so you can understand.

Solar cycle low, little to no DX. Little to no DX, peace will come to the band, so that locals can once again enjoy their hobby without high powered idiots jamming their QSO's trying to talk to "Billy-Bob" in bumfutch Kentucky, or a pile of dirt in the middle of the ocean.

> What's good for the goose......

You seem to think that mentioning hams, who are also guilty of breaking
the law would somehow "bother" me. As far as I'm concerned, ham, or
freebander, if you violate the law, you should get the punishment that
the law provides for.

Operating a radio is not a "right", it's a "privilege". And like all
privileges, it comes with associated responsibilities. If you can't
abide by your responsibility (Which usually means to follow the rules),
then you stand to lose that privilege. In the case of hams, that would
be their license. In the case of freebanders, it would be forfeiture of
equipment, monetary fines, and/or incarceration.

Our prisons are full of people who have forsaken their responsibilities,
to live harmoniously within our society, and as a result have lost the
privilege of freedom. It's the price you pay for being a sociopath.

>

>
> Wait a sec..you just said in aother post "So *WE* don't think you're a
> blooming idiot."

That's "babbling idiot". If you are going to quote me, please get it
right.
In that case "we" refered to other members of the newsgroup. In your
case, who "we" refers to is unclear.

Is "we" anyone who abandons CB rules, including freebanders, amp
jockeys, and just plain foul mouths? Or are you refering to a particular
segment of illegal radio operators?

"Yep, we illegal freebanders, are not as bad as those guys running amps.
We break the rules with a bit more class."

> I love talking to you when you're drunk, Dave...your hypocrisy comes
> shining through brilliantly.

Once again:

Hypocricy
1. Possessing of beliefs or virtues, one doesn't possess.

Now, what belief or virtue do I espouse (another word for you), that I
do not embrace personally?

>

There's a big difference in the severity of the offense, between a ham
that unknowingly failed to I.D. once or twice, and someone who willfully
and repeatedly ignores radio rules.

>

No one "gathered" anything. But you do pick up pieces of information
when you interact with people on a daily basis. That is hardly
considered "spying". Give it up, you're reaching again.

>
> >and why they feel that they are right, even >when they are in contrast

Not in the field of psychiatry. I don't have the degree. But I can still
study it as a hobby. It also makes life easier to endure, when you

understand why a-holes act like a-holes. You tend to feel more sorry for
them, then get angry with them.

Ok, then. I usually skip posts that start off with "XYZ is GAY!" or
"Dogie is a fag" as they are nothing more than juvenile mud slinging, so

I missed that reference. So I'll change it to "I'm putting you back in your BOX, by Friday", which means that as of the end of today, we're done here.

> indicators of excessive power operation.

So let's assume we have all of this "fancy" equipment, what do you use
as a reference signal? Remember, when looking at signals that are
propagated through F layer refraction, there will always be some fade
and selective enhancement. Because one guy comes in at +20db over S9
while the rest of the pile is at S8 does not automatically mean that the
stronger signal is illegally powered, it might just mean that conditions
to his "neck of the woods" is better at that moment.

Add to that the wide variation of antennas. Who would be stronger, the
guy running 2Kw into a half-wave dipole, or the guy running 500 watts
into a 3 element yagi? What about feedline losses?, polarization?,
ground conductivity?. These are all factors that would make a positive
determination of power output from a distance, to be nearly impossible.

You could make an assumption, that if a group of guys, all yaking it up
in one place, say Texas, and are all coming in within 1 S unit of each
other, except for one guy, who is 20 db stronger, that that one guy has
a few too many "logs on the fire", and you might be right. Assuming that
the other guys are all running the legal limit to start with, and not
just the "barefoot" 100 watts from an HF rig only.

>
> You have to be your own judge of what "many" is to a number of people.

> typical transceiver level of 100 watts plus 20 dB from an amplifier is a
> significant signal increase.

A jump from a 100 watt rig to the 1500 watt legal limit, is only about
12 db, which is the equivilent of 2 "s" units on a decently calibrated
meter. An additional jump from 1500 watts to 6000 is only 6 db more,
which is only an additional "S" unit.

But you are right when you say that an "S" meter gives a relative
indication. Thats the ONLY thing it gives. So unless you know what
signal reference you are comparing your "relative" signal to, the actual
reading is meaningless.

>
> : Most ham

No arguement there. A kilowatt is typically a 10db gain amplifier, if it
is designed for 100 watts drive.

> Many...
> ie as in a significant number build and operate amplifiers of >13 dB of
> gain. I guess the hundreds members of the list server group I frequent are

> amplifiers. You guys haven't been it the real world for some time... get
> off the decafe..

I'm not sure what your point is here. Are you claiming that there are
many more than "some" hams running huge amps, or not? Your last point,
claiming that most hams are not capable of running the legal limit,
would suggest that you believe that the guys running the really large
amps are in the minority. I would agree with that.

>
> : Ham's are, afterall, only human. Much of the same character flaws that

Sure. Much like guys like to build cars with 1000 HP engines, and then
drive them on the street where the speed limit is 55.

> Some of the amps members build mega
> watt amplifiers for non amateur applications. All the topics are covered

> legal...

Intentions aside, if they run over 1500 watts, no matter how justified
they might feel, they are in violation of the law, and no better, in the
eyes of the law, than the amp jockeys on CB channel 6.

How you or I might feel about it personally, doesn't change that fact.

What claims have I contradicted now, in your little fantasy world?

> It holds perfectly well with what you put forward about morals and what
> not. Opposing views shouldn't make you act like that, Hall.

I have not problem debating opposing view with people who are
intellectually honest. I do have a problem with people who take what I
say, twist the meanings, concentrate on the nuances, rather than the
overt subject, and then make the claim that I said something that I
didn't, and then accuse me of "lying" when I refute your interpretations
of what I said.

It doesn't

I suppose in your basic test equipment you have a signal generator
that has a calibrated output that accurately measures in
microvolts, and it has been calibrated by a lab in the last six
months?

And it will probably be far from accurate and certainly will not
be accurate from band to band.
>
> People like Art Collins were right on target when they first built radios,
> to calibrate their S-Meters against a standard as do many current mfgrs.

And even the Collins receivers did did not maintain s-meter
accuracy on all bands. I know, I have a Collins S-line, a KWM-2
and owned a 75A-3. I calibrated the 20 meter band for 50
microvolts = s-9, and it was off on the rest of the bands. It was
impossible to make it accurate on all bands. It takes a very
expensive lab grade receiver to maintain s-meter calibration
across all bands, the average ham rig will not do it.

> I'm quite aware of how my S-Meter responds across the operating range of

> Most hams don't run verticals in high power operation.

Your correct, probably most do not, but I know a lot of hams who
do. A lot of hams use verticals for DX work on the lower bands and
do run power with them. So what does that have to do with the
subject?

> Most hams don't run beams on the lower bands, wire is the antenna of
> choice.

Who said anything about lower bands, beams and verticals are in
common use on 20 through 10 meters. In my above reply did I say
anything about beams on the lower bands?

>
> This is where the home work and experience come in... something you appear

Yea, and you believe that the average ham rig has an accurate
s-meter. Talk about lack of experience.

How many discones do you know of that are in use on the HF bands?
Good grief!!!!

There you go with the assumptions again. When you are listening to
signals, what are these averaged knowns you speak of? Did you tune
across the band and just average all the signals and that becomes
your average known?

You
> ask nearby stations what they are using and the loud guy often brags about

There go the assumptions again. All your theory is based strictly
on assumptions, assumption that the guy is using a beam, using an
amplifier, (I have never heard the term 'running gas' for an amp
on the ham bands), not running an amplifier, assumption he is
this, assumption his is that, assumption his antenna favors your
direction, ect., ect., ect.

And just an assumption. How do you know what antenna the jammer is
using? How far away is he? You have nothing but assumptions that
can be way out of line. If the jammer is using a vertical with a

good radial system, his ground wave may be much stronger than your
friend with his dipole.
And this has nothing to do with your original claim that ham rigs
have accurate s-meters and you can tell that someone is running
illegal power just because he pins your s-meter.

I agree with you Dave, one should not discharge a cell totally down. I would take a typical 1.395 fully charged floating cell down to about .5 to .8 volts and consider it discharged. I use a high value resistor to draw a steady load of 10 to 50 mA.

There is a relative threshold below .3 to .5 volts that doesn't seem to be very healthy for nicad cell operation.

cheers

Yep, there are too many variables to consider that can affect both signals. I will give you an example. I and another ham living less that a mile apart use to have a regular schedule with friend about 40 miles away. The ham near me used a dipole, I used a vertical. I could put in a stronger signal with 100 watts to the ham 40 miles away than my neighbor ham could running his SB200 at over 500 watts out.

: And s-meters even after being calibrated, and that is on one band,
: are often incorrect after a time as components age. And you would
: be hard pressed to find the typical ham rig where the s-meter is
: accurate on all bands.

It take a short time to check the actual s-meter calibration with basic test equipment. Its operation across the bands is easily recorded. If you don't have an idea of what and how your s-meter works, it would be a great topic to go through. Not a real big deal...

: Actually correct, as most if not all s-meters in the typical ham
: rig are not calibrated accurately on all bands. Set up 10
: identical rigs such that you can switch an antenna to each rig
: tuned to a signal and you the chances are great (almost assured)
: that all will not give the same s-meter reading. You are putting
: too much stock in an s-meter that is used for relative signal
: strength readings...the key word is relative.

The key item is that your radio shack probably has one main radio, it's s-meter operation can easily be checked and recorded.

People like Art Collins were right on target when they first built radios, to calibrate their S-Meters against a standard as do many current mfgrs. I'm quite aware of how my S-Meter responds across the operating range of the radio... I've checked it more than once.

: With much more sophisticated equipment than an s-meter on a
: typical ham rig.

Relative s-meter signal strength is not hard to get a handle on. I'm surprised how many of you are in the dark over an S-Meter calibration procedure.

Don't hate cb timmyboy, don't even hate those who run illegally.
Hate is pretty strong. As far as ham radio getting its respect, it
gets plenty. How many times have you seen cb in the news media in
respect to disaster communications? How many time have you seen
ham radio mentioned? Maybe it is you that hate hams because people
like you who see nothing wrong in illegal activity have given cb
such a band name.

: something going on outside the regulations. OTOH, one guy might have
: hardline into a beam, and the other guy 100' of Radio Shack RG-58 into a
: radio shack discone.

Hi Dave,

Many hams will tell you what antenna they are using, some won't. I don't know a lot of hams running hard line on the hf bands, although I do know some. The guy running rg-58 to a discone is probably not going to be running gas, nor will he be heard very well. Although rude, some of the folks I listen to have little patience for mickey mouse signals and just talk over the weak signals until they go away. Poor Amateur Practice...

The general idea here is that you get a sense of how your station works, you compare signals you receive to other averaged knowns and make more informed assumptions about the power levels of high power signals. You ask nearby stations what they are using and the loud guy often brags about what amplifier or tube (even solid state at lower power levels) he/she is using.

:> True, but you can say that X station running full legal power into a
:> known antenna will probalby not be 10 dB signal below a same city
:> station "Y"; using some assumptions or knowledge of his antenna system. In
:> short, station Y is running gas when his signal strenght is 10dB higher
:> for a similar station and location.

: Or he's a lot better with antennas :)

He would probably be happy to tell you what his antenna is...

: Back in my CB days, I used to run mobile from a '67 chrysler imperial. Robyn
: rig, tuned to 4.0W output (I worked in a radio repair shop at the time) I
: ran a firestick antenna, and added a capacity hat, and retuned the antenna
: to resonance. Sitting in my driveway, two blocks away, I was 3dB higher
: into a given station about 15 miles away, than another fellow, from his
: base with a Ringo Ranger up about 30'. The antenna was resonant, the
: feedline was low loss, and the cap hat lowered my angle of radiation
: considerably.

But from experience, I know that certain firestick antennas have different angles of radiation compared to an early "Gringo Stranger."

If you were 10 louder, the receiving station might assume you have a "foot warmer" under the seat. Depending on the year of your operation, your modulation would have been slightly fuzzy or worse if your amplifier was on. Been there, done that...

:> One can easily measure and record a receiver (& S-Meter) calibration.
:> Common antennas have predictable gain and radiation patterns.

: True

there you go... now your catching on...

:> Many people will tell you about their station equipment and location over
:> the air.

: (50% BS factor though :)

Hams as a general rule have no reason to bs about their antennas. Some hide their actual locations but even using relative meters, band propagation and a few other observant operators around the state, we can make a pretty smart guess about their general location.

:> Most people can easily make simple comparisons using simple techniques,
:> common knowledge and experience.

: As long as we remember the limitations of simple measurements with big
: assumptions.

The assumptions don't have to be that large when all the facts and experience are in play.

cheers
skipp

Most hams don't run verticals in high power operation.
Most hams don't run beams on the lower bands, wire is the antenna of
choice.

This is where the home work and experience come in... something you appear
to lack on this thread topic.

Reduce the wildcards, know your station, add some experience and a little
practical knowledge. Practial assumptions can be made that are very
realistic. It's done almost every day...

Otherwise, keep your head in the sand...

YES, JJ and Skipp has based everything on assumptions. He is assuming the operator will tell you what type of antenna he is using, he is assuming there are other op's in his area to compare signals to, yhis whole arguement is based on a big assumption. .

Yes he is assuming the op will tell him his antenna, I thought he could figure this out without and info. now he wants the operator to tell him his antenna and tube size ... Mind as well just ask him how many watts he is running. LOL Skipp goodnite.

: So you are going to have all this information on some station you
: hear on the air that is 50db over s-9 which convinces you he is
: over the legal power limit, because your s-meter says so.

Let me give a real world example, then I'm about done because this is taking way to much of my time.

I arrive on a band, say 40 meters which is regional to the US West Coast to an extent during any normal or average day.

Friend Eric comes on from LA (I'm in the greater Sacramento area) to chat using his SB-220 and a typical dipole or inverted vee. His near legal limit signal is loud... I can easily see his signal is very loud and clear, part of the reason of said is that I rebuilt his SB-220 for him. :-)
I know the general makeup of his station and use it as a relative S-meter reference.

A jacka$$ jammer comes on and plays music... we have heard this guy before and can see over time his signal acts predictable for someone down near Eric. A few other friends on the band have beams which point toward the same area as Eric and the jammer.

Some of us have direction finding equipment...

Eric can also hear the jammer on ground wave... Now the jammer is mad because he's not able to take Eric out. His signal jumps up +13 to +20 dB.

It would be more than reasonable to assume the jammer has kicked his amplifier on. His now +13 dB signal increase would lead most people to understand that he is running serious gas.

Eric talks his same area station up to the legal limit, the jammer has him by +6 to +10 dB signal strenght.

End of assumption...

Epilog... based on a few other non mentioned events and references in the above example, I could probably make a pretty good guess at the size of his amplifier. If he is a known person, I might know more about his actual station from previous contacts, his "former" or current friends, not to mention his own mouth.

: So your s-meter tells you what type of antenna each station is
: running. Maybe the strongest station which is running the lowest
: power is using a beam and the weaker station running more power is

: using a dipole.

A good part of typical amateur operation is the receive mode... as I mentioned many other times... you can often hear an operator talk/brag about their station.

: Let's see you send a letter to the FCC about some ham you know is
: running excess power because your s-meter says so and see how hard
: they laugh.

When you back it up with credible information and facts, they act.

Breaker, breaker it's amateur ham radio.

>Another "bright" person, who doesn't know the >difference between ham radio and CB.....
>Dave
>"Sandbagger"

A very bright person....he is merely telling you like it is...the public's perception. You're not very good at seeing other views. Some of us are reeling and rolling over your self-contradictory claims:

In one post you claim skip is the MAIN problem on cb.
In yet another you claim amps are the MAIN problem.

In one post, you claimed those that freeband are federal criminals for breaking what you call "Federal Law".
Yet when a hammie receives a letter from the FCC for rule violation, you begin your ornithilogical dining of big black crow.
So with your illogic, a cber is a federal criminal for violating any rule, no matter how minor, but if it's a hammie doing the same thing, you somehow exonerate their "criminal status" in your tiny mind.

In one post you claimed that escaping to the freeband isn't so bad and that you have no problem with it.
In another, you claim the opposite and say they are criminals not respecting society.

In one post you claim that actions reflect deterioration of society as a whole. In another, you feel your actions and behavior are an exception to what you hold others to because your personal feelings toward another dictate exemption...the best part is when you attempt to explain away your lies from the previous days drinking binge...almost predictable.
Go on. Tell us you can't remember them <g>.
There's more.
Now hurry up and tell me you're gonna ignore me again so you don't blow your stack like KC8LDO Lelnad C. Scott,, like "Aaron", like N8WWM Dogie Adair, and like Frank Gilliland have all done...it's necessary so they don't lose any more ISP's. You would be smart to follow them...it took them years before they realized they can't hold an intelligent conversation while simutaneously holding their temper or tongues. Frank thought he would get by with his dealings with me acting as "arron" but

he messed that up too many times as well. See how peaceful the canceled "aaron" is now?

Comes down to emotional issues.....they just can't control their behavior. Look, "Aaron" lost another one yesterday....how many has he lost now?.....very antisocial behavior and a blatant selective disrespect for rules. As you claimed in one of your posts Hall, these people must have had a traumatic childhood, maybe even neglected in their youth, it would explain their actions...see...sometimes you make sense, Hall. You just need to steer clear the juice in the little brown jug.

: Dave Hall <nojunk_n3cvj@worldlynx.net> wrote:
: So let's assume we have all of this "fancy" equipment, what do you use
: as a reference signal?

A nearby "known station" is a good reference signal.

: Remember, when looking at signals that are
: propagated through F layer refraction, there will always be some fade
: and selective enhancement. Because one guy comes in at +20db over S9
: while the rest of the pile is at S8 does not automatically mean that the
: stronger signal is illegally powered, it might just mean that conditions
: to his "neck of the woods" is better at that moment.

Not all signals are received via F Layer, each event is different.
Everything matters, experience is a factor in the mix...

See my example in the other post as a real world event that demonstrates
how one can make realtive smart assumptions about received S-Meter
indications.

: Add to that the wide variation of antennas. Who would be stronger, the
: guy running 2Kw into a half-wave dipole, or the guy running 500 watts
: into a 3 element yagi? What about feedline losses?, polarization?,
: ground conductivity?. These are all factors that would make a positive
: determination of power output from a distance, to be nearly impossible.

Two adjacent stations, one at the legal limit (and known equipment)
compared to the much louder second station. The second station tells you
he's running __________ type of antenna. Should he be +6 to +10 dB louder
after the antenna is figured into the comparison... Nope.

Another indication of excessive power are the spectral product levels of
his signal. One can often hear nearby spectal poop and the signal in
questions' bandwidth increase.

: You could make an assumption, that if a group of guys, all yaking it up
: in one place, say Texas, and are all coming in within 1 S unit of each
: other, except for one guy, who is 20 db stronger, that that one guy has
: a few too many "logs on the fire", and you might be right. Assuming that
: the other guys are all running the legal limit to start with, and not
: just the "barefoot" 100 watts from an HF rig only.

There you go... ding..! With experience and knowledge, you can expand
the above to various bands, locations and conditions. Most people are
creatures of habit... over the average you get the big picture.

:> Not true... even an S-Meter gives a relative indication of excessive
:> power. Once your over the limit, your over the limit. Operation from a
:> typical transceiver level of 100 watts plus 20 dB from an amplifier is a
:> significant signal increase.

: A jump from a 100 watt rig to the 1500 watt legal limit, is only about
: 12 db, which is the equivilent of 2 "s" units on a decently calibrated
: meter. An additional jump from 1500 watts to 6000 is only 6 db more,
: which is only an additional "S" unit.

Yeah, but there are some +13 to +20 dB gain amplifiers in operation that I
know about. It's not hard to see the s-meter really move when those guys
come on.

: But you are right when you say that an "S" meter gives a relative
: indication. Thats the ONLY thing it gives. So unless you know what
: signal reference you are comparing your "relative" signal to, the actual
: reading is meaningless.

Exactly...

:> Most hams are not capable of running twice the legal power... a small
:> percentage have large amplifiers which have 8 to 13 dB of gain.

: No arguement there. A kilowatt is typically a 10db gain amplifier, if it
: is designed for 100 watts drive.

And many current amplifiers are often over driven... causing distortion.

:> Many...
:> ie as in a significant number build and operate amplifiers of >13 dB of
:> gain. I guess the hundreds members of the list server group I frequent are
:> "just a few." Web sites abound with pictures of these well built
:> amplifiers. You guys haven't been it the real world for some time... get
:> off the decafe..

: I'm not sure what your point is here. Are you claiming that there are
: many more than "some" hams running huge amps, or not? Your last point,
: claiming that most hams are not capable of running the legal limit,
: would suggest that you believe that the guys running the really large
: amps are in the minority. I would agree with that.

Yep, I know first hand of hundreds of large amplifier people who chat
across apopular net list server. Most all are nice people who enjoy the
hobby and building large amplifiers. Said amplifiers can be used in other
applications. It's a science unto itself that has a pretty large
following...
Some of us meet up at the Dayton Hamfest each year....

:> Building an amplifier for > +13 dB operation is legal, using it above the
:> authorized limits is not.

: True!

People seem to think that one has to have an amplifier with no head room,
or that there no valid reasons for having serious gas... when there are
applications and occassions where lots of power is legal and good.

:> Both are done by many hams and cbers.

: A big difference. Hams can do it legally, CBers cannot do it legally
: under ANY circumstances.

Class D 27 Mhz CB In the United States. But know that there are fcc
licensed services in the same range as CB with allowed higher power
levels. I mention the FCC web page as a good place to locate data about
said.

:> Most of the people I know running large amplifiers, don't use them very
:> much. Many hams and non hams take great pride in building large
:> amplifiers at various frequencies.

: Sure. Much like guys like to build cars with 1000 HP engines, and then
: drive them on the street where the speed limit is 55.

Christmas, are they up to 1000 hp now... I don't really follow that
"hobby" much. But the result is the same...

The 1k hp guys really like to open it up on long flat highways. The guys
giving it the gas in more crowded areas often crash or get caught.

:> Some of the amps members build mega
:> watt amplifiers for non amateur applications. All the topics are covered
:> in these list server groups over time.
:>
:> Even the truth comes out if you can wade through the off topic BS.
:>
:> Many hams run large amplifiers for practical reasons, often to get over
:> jammers and interference. Adjustment of one level /knob makes them
:> legal...

: Intentions aside, if they run over 1500 watts, no matter how justified
: they might feel, they are in violation of the law, and no better, in the
: eyes of the law, than the amp jockeys on CB channel 6.
: How you or I might feel about it personally, doesn't change that fact.
: Dave
: "Sandbagger"

Some of the high power people are in Broadcasting, some in Research, some
live in other countries... many are hams. Few run real gas on the
Amatuer Bands unless there is a reason. You would be surprised to know
about some of the really really large amplifiers in operation around the
world.

cheers

The mfgrs tell me 1.0V for best life, or 0.9V as a minimum.
The discharge curve is really steep in this region, so the amount of time at any given rate between 0.9 and 0.5 is very short. However, one of the other cells in the pack may have already hit zero.
If so, then any further discharge of the pack causes a reversed voltage across that cell, and that starts chemical reactions that are very bad for it. I'm not a chemist, so I can't detail it, but I'm sure this is correct.

You CAN discharge single cells to zero, since there's no way for them to be reversed.

For a brief moment, I felt it might help to debate with mr fake
boobner, but he adds nothing of substance to the thread.
My guess of greater than 100 amplifiers is more than modestly low, made
for him only. Anyone actually operating real radios knows that number is
unrealistic on the low side.

:> I would refernce the Amateur Magazine QST for examples, there are often
:> enforcement bullitins from the FCC posted at various web locations. Do you
:> own homework and quit wasting our time.

: Ah, that's it, put the onus on someone else to prove or disprove
: YOUR claims.

If your interested in the truth, pick up a magazine or search the web...
I'll sleep well if you don't belive me...

The point of this entire thread on the original topic was to let the
posting person know that hams can and do operate amplifiers over the
legal limit. They are a relative number, but probably more than one
would think exist.

Some get caught, most don't.

Most owners of large amplifiers are good people who don't use them in bad
context... legal operation of the amplifier is often done.

On sidebar note...

Most high power cb'ers don't get caught... Many CB'ers don't use their amplifiers, many don't use them in bad context although their operation in the US for Class D CB is not legal.

Many people think the "US War On Drugs" can be won as it is now done.

Recently, the local paper did an article on me WRT Skywarn.
Among other amusing distortions, they put in a picture of my VC-H1 and called it my "radar unit"..

We use SSTV to pass radar updates to the spotters, and observations from the field back to the EOC. We've even done "realtime" with SSTV pictures of a tornado in progress, emailed to national weather in Indy. At that time, they were doubting our reports since our program was new, and their radar didn't show anything interesting. :) That event is part of their radar training course now.

The "Who" doesn't matter, Dave,

>Yes it does. There are some people in life with >a "kick me" sign
banded on their forehead.
>You are one of those people.

Tut tut....that is selective practice of the good will you allegedly preach,,,mighty hypocritical of you to claim for another to practice one thing but you have difficulty practicing what you preach..you now have entered the "Hypocrite Hall, of Lelnad C. Scott Kc8LDO, Frank Gilliliand, N8WWM Dogie Adair.

>What claims have I contradicted now, in your >little fantasy world?

All the world's your illusion, Dave,,,you're missing posts again.

It holds perfectly well with what you put forward about morals and what not. Opposing views shouldn't make you act like that, Hall.

>I have not problem debating opposing view >with people who are intellectually honest.

Sure you do, Dave...the lies keep flowing...it's not hard to pick from any of the many many posts where you have needlessly started ship with cbers, called them names unprovoked, and tried to turn the topics personal and insultive...all unprovoked....and you were doing all this long before I ever sunk your leaky boat I do find your attraction somewhat troubling, though...after all, you did say you spend the majority of your time with those you care about most.....and you have spent the majority of your time in front of your monitor drinking and hurling insults.

>I do have a problem with people who take >what I say, twist the meanings,

Tut tut.....the post that showed what a liar you are was presented unedited in it's entirety..say it a few more times in hopes someone, anyone will believe you.

>concentrate on the nuances, rather than the >overt subject, and then make the claim that I >said something that I didn't, and then accuse >me

of "lying" when I refute your interpretations >of what I said.

Not at all. You were caught and the best you can do is lie.....or say,
"I forgot about that post."
Repetition isn't kind to you, Dave. It hurts you more than you will ever
know, because you obviously can't see yourself as others do.
The detached rarely do.

It doesn't
fit with jibe your mental health hobby (stifling a hysterical roar)
!!
The mere notion that you derive pleasure from trolling a cb board and
"yanking" the "chain" of someone

>Not "someone", YOU. <
>Keep repeating that. And don't for a minute >think that you aren't
obvious in your attempts >at "yanking the chain", of the people you
refer >to as "the kennel club", doesn't give you some >sort of pleasure,
in your own warped way.

I give it back, Dave. They started their bullshit in here and found a
few that render all they do impotent. If you feeel it important to
recognize me in that manner, who am I to argue?
I call a spade a spade.

>When you call someone a hypocrite, you >really should look in the
mirror first.

I'm not the one with the split family.
I'm not the one unhappy.
I'm not the one who attacks others.
I am the one who points things out, like the naming of a rec.radio.cb
trouble-causing posse by "Aaron", who hand-selected, chose and named the
members himself....you (Dave Hall), KC8LDO Lelnad C. Scott, Frank
Gilliland, and Dogie Adair N8WWM.
He knew exactly what he was talking about.

Which makes your hypocrisy and malady even more embarrassing. You have
no idea who you are attempting
but failing to argue with and your beahvior is indicative of this high
esteem that hammie radio projects.

>I have a fairly good idea<

You don't have a clue.

>The fact that you respond so predictably, to >programmed stimulous,

Holy Cripe! Is that what you call it when you address me or my post?
Programmed stimulous? You clown....the word would be stimuli, if you
even had a clue what you were talking about. You sound like a wannabe
mental health tech almost as bad as you do a socialist and wannabe
dictator of radio.

>Keep guessing. It's even more fun when you >attempt to grope for the truth that so alludes >you.

Not as fun as your projected ignorance. "Programmed STIMULOUS' ROFLMFAO! I'll bet YOU have programmed stimulous..sticky palms and all from your pc....what is the definition of that "programmed stimulous"? Your pc gets you off? Ahhahahahhaha..LMFAO!

>just further validates my diagnosis.

Your WHAT? Let me get this right...you are claiming yourself qualified to give a diagnosis based on personal information you have NOT culled. I take back the alcohol factor. I think you are a speed freak.

>But I've got your number as evidenced by your >increase in stress level. I can play you like a >cheap fiddle......
I

Hooooooboyyyyy.............better take stock of your situation. Take a step back, no, take two steps back...and yet another step back....Deeeeeeep breath.....
Does that fiddle come already stimulated or o you have to program it?

> do not treat other people with the same >distain, simply because they >act appropriately,

Sure you do Dave, the archives are full of your bullshit attacks on law abiding cbers...full of your insults, etc. You are not the judge in what is proper. Matter of fact, you have proved you are so far removed from what is the majority that you are seriously out of touch.

>According to you. <

Your posts speak for themselves. I don't have a pc, but they were catalogued by a retiree...any time you're ready to made a hypocrite and liar some more,,,say the word

>Sure, more cut and pasted excerps, taken out >of context,

Now that the entire group knows you are imagining thinsg and seeing things that aren;t there...we can chalk it up to the alcohol factor. Once again, the post that has you pissing blood all over yourself was unedited and presented in it's entirety.

>and spun with the skill of a democrat fighting >to retain his seat in office, and presented as >some sort of testament to just what exactly?

You don't have what it takes to discuss politics with me.

>If you had any sort of credibility, it might make >people stop and consider. But since you are >viewed as a warped sociopath, by anyone with >at least half a brain, your rants are nothing >more than, well, rants.

Right on! I'll go on with my rants and talking DX and doing my thing and meeting good folks from the ng and continue to get invitations from ng

cbers and hammies alike to hang out, go to keydowns, concerts, the strip clubs (hmmmm....wonder where THAT invitation came from <g>). I have taken several up on the offer already and will cotinue to do so in the future. I will continue to expand my knowledge of antennas and amplifiers due the great minds on this board. You, and Frank, and Lelnad, and Dogie, can all coexist in your angry little world and remain impotent. What you don't know can't hurt you.

Oh, your insults are becoming so....so.......sophomoric. Give me the word, and I'll send you the >personalized certificate, with "Sophomoric" in gold leaf.

Send it.
Your gay buddy that keeps mentioning my underwear

>Now we're digressing into sexual inuendos as >insults.

We? No, not "we" as I have never solicited personal information on your underwear. That was from your camp, YOU have to deal with it.

> Your meltdown is progressesing just as >predicted.

You are misattributing quotes again. It is Lelnad KC8LDO that is enthralled with my ball wear. I happen to think that makes him queer. No need defending his actions...I'm not slamming him for being gay, merely making an observation.

>In the words of the leader of the colony on >Talos 4: "Excellent!"

You watch too much tv. Spend more time outdoors.
It's good for the soul.

Thatwas has been played, too. You're washed up. Besides, you couldn't spell "work" without your dictionary let alone perform it.

>Note the primative attempt<

Let's see that again, shall we?

>Note the primative atte<

Almost.

>Note the primative<

By Jove, I think he gets it. I don't normally make fun of spelling errors, but you are desperately searching and attacking anything you can grasp out of thin air.....your own yard is a cesspoole.

>at badgering me into offering up some tidbit of >information about what I do for a living.

Never crossed my mind...we know you're unemployed and a drunk. I just theorized on your fantasy role..believe me...no thought went into it, but it must have been dead on. Stop squealing.

> You are getting way too predictable.......
>Last day to play.....
>Dave
>"Sandbagger"

Yea,,,,,,according to you, you're the only one of the trouble-causing posse in rec.radio.cb named by "Aaron" of Lelnad C. Scott KC8LDO, Dogie Adair N8WWM, Frank Gililand, (and yourself, of course) that hasn't had an ISP PULLED, but that is suspect as well. Better to pick a date to quit and stick to it, if you have the self-control.

Nobody hates CB. Why would I hate something that has given me pleasure
for the past 30+ years?

> you feel you dont get your
> "proper respect" you think you should deserve from the general public and it
> really pisses you guys off.

The term "Breaker Breaker" has never been associated with ham radio.
It's something that grew out of the CB fad in the late 70's.

An unfortunate truth is that the general public views CBers as a lawless
bunch of anarchists, who blatently disregard the rules of radio law and
are the cause of the vast majority of interference to home entertainment
equipment. Which is why there are more and more laws being proposed to
regulate CB radio at the local level, since the feds have been doing a
poor job of it themselves. It is also a good reason why you can't buy a
new home in a development without some sort of antenna restriction. I
can't say that I would blame any ham that would want to put to rest any
notion that ham radio, is connected in any way to that image.

Hams do not use the term "Breaker Breaker". If the public cannot differentiate ham radio from CB, then the folks at the ARRL have some PR work ahead of them.

> You're not very good at seeing other views. Some of
> us are reeling and rolling over your self-contradictory claims:
>
> In one post you claim skip is the MAIN problem on cb.
> In yet another you claim amps are the MAIN problem.

Not true. I said, that amps are one of the primary reasons why the noise level is so high during a band opening. The fact that people engage in skip talking is yet another reason for the noise.

Learn to read for content.

>
> In one post, you claimed those that freeband are federal criminals for

> rule, no matter how minor, but if it's a hammie doing the same thing,
> you somehow exonerate their "criminal status" in your tiny mind.
>

I said no such thing. Hams, who break the law, are just as guilty as CBer's. I make NO distinction.

> In one post you claimed that escaping to the freeband isn't so bad and
> that you have no problem with it.
> In another, you claim the opposite and say they are criminals not
> respecting society.

And I keep pointing out to you, that there is a difference between how I feel about a situation, and what the letter of the law states. Personally, I don't care who runs on freeband, as long as they are not causing interference to legal stations there, or on the adjacent ham bands. But regardless HOW *I* (or you) feel about the situation, it is still in violation of the law.

>
> In one post you claim that actions reflect deterioration of society as a
> whole.

This I remember saying, but more accurately, the decline in moral values, has predicated the slow decline in civil society, and has given way to an "I do what I want, and tough shit to anyone who feels differently" attitude. and I still feel that it's true.

> In another, you feel your actions and behavior are an exception
> to what you hold others to because your personal feelings toward
> another dictate exemption.

I never made that statement. More inaccurate paraphrasing on your part?

We were talking about DX pileups. That infers DX signals.

If he's talking about direct local signals, then it does become a bit
easier. But that's not what was implied.

Different criteria.

>Why did I know you would say that?<

For the same reason I knew you would cut and paste to your heart's
content.

>What follows is yet another attempt at >rationalizing the reason why
you not just the >flip side of my coin.

Come again? We ain't real familiar with that "deliverance" type talk
down here.

When I say something is an opinion, it clearly is visible at first
galnce. I don't put something out there unless I know it to be
reasonably true and am always willing to listen to an opposing view
while putting my personal views to the side while refrainiing from
personal off topics. You claimed you never did something, I merely
pointed to a few posts that are in direct contradictory with what you
were trying to claim. On top of that, you attempted not once, not twice,
but three times to deliberately misattribute something to me that I
never said in a deliberate and malicious fashion.

>Uh huh, sure. Whatever you say. <

No....it was what YOU said....I just posted the post to "point it out"

>yet when the table is turned on you, you hide >behind "It's only my
>opinion". Which is it then?
>Are we both liars, are are we both just stating >our opinions?

We are both entitled to our opinions without prejudice. I hesitated to
call you a liar, but after deliberately trying to malign my character
with repeated claims that I said something when I clearly did not,,,you
left me no choice.

>If it walks like a duck, looks like a duck, and >quacks like a duck, then it sure ain't no >chicken.......

Agree...but you don't like being told you're a liar.

>I see that you took a fancy to the term >"sophomoric" which I used a >few posts back, and are now using it quite >regularly.

Don't apologize. You are the second of Aarons named rec.radio.cb trouble posse who has asked me to dumb down my word usage. Frank was first.

>Another example of your (not so) subtle ways >of hurling condescending insults. I thought you >said you didn't do that?

I don't. You made it personal and are gonna cry rivers because I won't lay down and take it. Instead, it gets returned to it's rightful owners.

It was comments like these that resulted in me "returning the favor".

>Maybe to people like yourself.<

Here again is where your socialism rears it's ugly head.

>While we're on the subject:
>Socialism, n. "A social system, in which the >means of producing and >distributing goods are owned collectively and >political power is >exercised by the whole community."
>Now, what part of that applies to anything >even remotely related to >anything that I've said?

Get a better dictionary.

>Why? This one provides the proper and >correct definitions.

Sure they do,,,but as the part that you cut out said...your dictionary is perfect for you as it only gives a few definitions...only part of the story. There are at least 12 definitions to the word....your dictionary is perfect for you, as you have clearly demonstrated that if you know nothing of it, it must not exist. When you are finshed borrowing the book, give it back to your daughter.

> Because they don't agree with you is not >cause enough for me to want to change it.

Because YOU didn't agree with all the definitions of "spying", I had to get the big boy's book to show you not only did it, but lied about it.

>I guess you feel that anyone who believes in >law and order, and does >not selectively break laws is somehow a >socialist?

I can't stress it enough. Stop guessiing.

>A non-answer.<

You're nontypical...especially of hammie operators.

> Typical for one who's backed into a corner.

But you seem so comfortable and familiar there.

>Maybe if your parents<

None. I was born in a desert and raised in a lion's den.

>Is that before or after the visit from the saucer >men?

Dunno..that was nocode Lelnad C. Scott KC8LDO's forge of me.

>had taken some cat-o-nine tails across your >sorry butt, when you were
>a misbehaving child

The Seer malady has just entered the Hypocrite Hall. Please take a seat
and we will close the door.

>instead of adopting the neo-liberal-hippie style >of allowing children
>to "express themselves", even when those >actions were bad, you might
>have a greater respect for doing things the >proper way, and you
>wouldn't be so anti-social.

I'm not anti-social, Dave,,,I'm anti-asshole.

>You must hate looking in the mirror then. <

I'm not the one focusing on mirrors. Read about dwelling on THAT in your
matchbook psyche work.

You are upset

>Hardly. You still don't get it do you? You, my >punch clown friend, are
>my entertainment.

Won't work.
I said that of this group when I decided to stay (it's in the archives,
go get it), that it was my fresh humor for the day and brightened my
mornings....put me in the mood to do my job, ya' know! You claimed you
were in this group way longer than me,and you are right, but I will
wager you never claimed that of this group until post-twist!!!

>I NEVER said that the "group" was my >entertainment. Read it again, I
said that >*YOU* were my entertainment.

Then why were you so hostile before I arrived? Hmmmmmmmmmmm, Davey boy?

>So you are right that I wouldn't have made the >statement before you
came on board, unless, >of course, I'm really a visiting time traveler
>from 2525.

You're just a drunk. An angry one.

>As of Friday, I will be done with you.<

Sure you will. I spend maybe a total of one or two weekends a year
indoors, so that is when you will manifest as some other faceless sap
hurling insults. Lelnad KC8LDO used to do it all the time...each and
every weekend like clockwork..

>The paranoia is kicking in again eh? <

I dunno. What was that behind you?

>I can guarantee you, that I won't be here at all >on the weekend.

And with your streling record, we can all bank on the complete opposite.

>But that's not what I was refering to. <

Right. You have problems focusing and staying on topic.

>You see, like a child, who takes his pet rabbit >out of the cage, and lets him run around on >the floor for a while, but then has to put him >back before he leave a "pile" on the floor, I >have toyed with you this week.

How quaint that your "toying" with me didn't begin until I showed you were a liar with your own unedited posts.
As long as you believe yourself, I'm ok you're ok, but for some reason, you are compelled to a countdown of the weekend. It was probably a pretty good move,,,,you can' t fall from underground.

>But in the interest in conserving bandwidth, >and as a courtesy (something that you should >study) to other people, who may not >appreciate my "entertainment", I will put you >back in your cage, and return to ignoring you >until I feel another need to let you out again. >Unless, of course, you actually have a >coherent thought, and decide to >approach a subject rationally, instead of >confrontationally.

Your flawed interpretations were evident when you claimed all those hammies were federal criminals.

>While we're at it:
>Criminal:
>1. Of or involving crime.
>2. Guilty of crime.
>3. One who has committed a crime.
>Now of course you will take issue with the >term crime, so in anticipation of this:
>Crime:
>1. An act committed or omitted in violation of >the law.
>2. An unjust or senseless act.
>Now lets apply some logic shall we?

Not yours we won't. you're a follower,,,,,a yes "man",..a brainless drone evidenced by your constant need to be validated and accepted by a society only you conjure and see.

>Is operating a radio, on frequencies not >authorized by the FCC, or with power levels >higher than authorized by the FCC, a violation >of federal regulations (I.E. The Law)?
>The answer to anyone but a sociopath would >be: Yes.

It is a language barrier here you fail to grasp. Contact an attorney for crying out loud. Even that 'ol dude that signs his hammie posts as a lawyer and used to work for the FCC will tell you what a loon you are. He did it to Lelnad.

No, it's not actually. We can claim over 100 DX countries, with cards to prove it, on HF.
Nocodes can't do that.

>You make the erroneous assumption that DX
>is the be all,

Where did I do that?
Shooooooooow me the money!!!!!!

>Right here:
>" We can claim over 100 DX countries, with >cards to prove it, on HF."
>The implication, (which you will convieniently >deny) of course,

I don't ever have to deny anything with you Dave,,you do it so well..like giving a child a sharp object, you will injure yourself each time.
First you claim it was an "assumption" and then you proceed to give us your version of what an "implication" is and claim it that. As usual, your posts contradict each other, cancel themselves out, nullify whatever you say,,,self-contradict. You're a walking plight to hammie radio.

>is that DX is the litmus test by which you >measure a radio service's relative worth.

It's what I enjoy. And local talk.

>The fact that a No-code can't work DX, seems >to be important to you, but I can assure you, it >doesn't mean squat to them.

It shouldn't.

>You wear your DX achievments (and I use the >term loosely) like some sort of badge of honor, >ike it actually means something.

Not at all. You asked about it.

>Any idiot, with $100 to spend, and an >penchant for ignoring the law could do what >you do.

And any drunk with 6 dollars can drink cheap wine and do what you do..get out here and babble about everything that pains you, from me to democrats......I take that back..they can probably do it more coherently.

>It doesn't take any talent or discipline. That's >why I grew bored with DX in the 70's.

No surprise. You have shown an extremely short atteention span and a predispositon for forgetting at the most convenient times. Alcohol

clouds judgement.

>A no-code tech, who builds his own antennas, >or operates a repeater, earns more respect >that a freeband DX'er.

It's all about respect to poor Davey 'and Davey boy ain't getting any. I told you, oh loathesome one, ye need give to get. Demand, and you will be told to kiss azz just like N8 and the rest of your trouble crew.

>Personally, I find the pursuit of DX to be >pointless and boring, and >conducive to interference, a flash point for >hostilities, and >generally shows the "bad" side of radio >operations.

But of course you do. It shows in your history of perpetual hard-ons for cbers. It has always been a problem in your internet incarnation.

>Once again, you measure CBers against that >"DX" litmus.

That's you, not me. I mentioned it once and you act like you're passing a kidney stone.

>I am a CBer, and have had many, many >friends over the 30+ years that I've been on >CB.

Did they all desert you at once or was it a gradual process?

> Most of them didn't care much for DX either, >once they made the first dozen or so contacts >and the thrill wore off. I have no "hard-on" >(hmm, a sexual reference, what could that >mean?)

You're the self-professed psycho, psyche boy.
You tell us. Don't bother. You never read Freud and even if you went and did a crash course on the web, you still wouldn't comprehend him. Hell, you call me nuts, stay away from philosophy,,as it is obvious you have never read any at all, not one book or author on the subject. Stick to fictional TV and comic books.

>for Cbers. I do have a problem with those >who's selfish pursuits infringe upon the rights >and enjoyment of others who are trying to do >their thing on CB, and are protected by part >95.
>No one will be happier than I will be, when >cycle 23 is in the can, >and CB can return to normalcy.

Whatever limited definition you wish to apply that term.

>I'll make it simple so you can understand.

Just make sense and it won't be aproblem,,I assure you.I give you my word.

>Solar cycle low, little to no DX. Little to no DX, >peace will come to the band, so that locals >can once again enjoy their hobby without high >powered idiots jamming their QSO's trying to >talk to "Billy-Bob" in bumfutch Kentucky, or a >pile of dirt in the middle of the ocean.

Hey, that's great,,,us flatlanders can talk across the state during low peaks in betweenthe cycles.....and when we can't, some juice DOES get the job done over flat land and water for long distance instate DX.

>No code hams can legally build their own
>equipment,

So can many cbers.

>own and operate
>repeaters,

Some of us feel repeaters suck, just like you feel DX sucks.

>That's a heck of a lot more than you can do >on the freeband, no matter how much you >disdain it.

I don;t disdain the freeband at all. Slow down, Dave,,,you aren't thinking rationally.

>No, you disdain the no-code tech priviledges.
>Dave
>"Sandbagger"

Not the priviledges, just a minority of the nocodes.

That's really hard to do, considering the ever changing band conditions
(We are talking about DX stations right?).

Maybe. Depends on which direction the first station's antenna's primary
lobe is facing, his angle of radiation, and whether or not it is mounted
in the best position and height, for the distance from his station to
yours, and his overall HAAT.

And how many times do you get two guys that live next door to each
other, for whome you can make a valid A/B comparison? In the real world
of DX pileups, there will be a bunch of guys that are all over the globe
(or the country depending on the band), who's signals are all over the
place. Do you assume that the W5 station, who's head and shoulders above

most of the rest of the pack is running a bit hot, if there isn't
another W5 station to compare to?

>
> Another indication of excessive power are the spectral product levels of
> his signal. One can often hear nearby spectal poop and the signal in
> questions' bandwidth increase.

That is only an indication of compression and overdriving, or an amp
that's seriously out of tune, or with the ALC disconnected. You can have
that distortion at any power level. It's not exclusive to "high power"
amps.

>
> : You could make an assumption, that if a group of guys, all yaking it up

That's one of the reasons hams are given the authority and
responsibility to verify that their power output is within specs. There
is nothing wrong, and in most cases is much better for the life of the
amp, to have it loaf along at 1.5KW, then to be "balls to the wall" to
make that same 1.5KW.

> : Sure. Much like guys like to build cars with 1000 HP engines, and then

Sure. A blown big block, can easily make 1000 HP. Some of my closest friends run engines like this in their boats. Mine is only a measly 425 HP though.....

True. But, if you own a oscilloscope and know how to properly read
one. you can usually tell when someone is running more than legal
limit.

> but it's a good indicator.

A high s-meter reading is not a final indicator of someone running extra power. I once worked a ham in Hawaii on 10 meters that was the strongest signal on the band, he was way over s-9, where other signals were under s-9. Now I guess I should have know the guy was probably running lots of power? He was running 5 watts.
Sure, I have heard stations that I would guess were running an amp, but there is no way I could hazard a guess that they were running illegal power levels just because they were causing a high s-meter reading. There are too many variables to use an s-meter reading to try and determine someone's power level. I will reiterate this once again, an s-meter on the average ham or cb radio only indicates relative signal strength. They are not accurately calibrated s-meters, at least not on all bands. And even if they were, the readings are still relative, they only tell you that one signal is stronger or weaker than another, nothing more.

> taking way to much of my time.

Skipp, we know how it can be done, but by your inference you can just like jump on a frequency and know that a ham is running excess power, You of course want him to do your homework and tell you what antenna he is using the size of his tube, his grandsons birthdate etc etc . You are asking him to provide oyu with the info so you are setting up a test situation

>
> I arrive on a band, say 40 meters which is regional to the US West Coast

> S-meter reference.

Ok so now you have a test situation since you have known variables, jump on a freq where you don't know the operator and what type antenna he is using, what amp he is using, look at your calibrated s meter and then tell me how many watts he is running. Anyone can set up a test situation Skipp and control some of the variables yes,. your making it sound like you can determine peoples general location etc just from your s meter.

>
> A jacka$$ jammer comes on and plays music... we have heard this guy

> understand that he is running serious gas.

Well Skipp if he is a jammer it is reasobable to think he is also running an amp i didn't need a fancy s meter for that. But try you your same trick when you don't know a persons antenna , his tube size, or his location. You can't do it no matter how you try and spin it.

Tell us where these 2 guys are located. knowing this info, you are on 14.195, lets say you have a beam you are tuning around dead east of you you lock onto a signal s-9 it is a female ham, seconds later you hear another station he talks for a bit and you get him at s-9 as well. Does this mean they are both in the same location running the same power? Answer this then go on to the next question.

Now the female ham is running 100 watts into a 3 element tri bander, the male ham is running 1000 watts into a dipole. Are they in the same general area ?

The female hams tower is located 250' away from the radio, she uses rg213, the male ham feeds his antenna with x amount of ladder line into a tuner. Are they in the same area?

The female ham lives in a valley 20 feet below sea level the male ham lives on a hill are they in the same area? Same signal right?

> Eric talks his same area station up to the legal limit, the jammer has him
> by +6 to +10 dB signal strenght.

He may have been talking on a dipole and went to a beam as well you can only assume.

Please explain? I have an oscilloscope and I know how to use it.
Tell me how and I will hook it up to my receiver and nail all
those stations running illegal power.

Twist,

In that case Dave should be happy, because this is my last
post from Lucent.

I was part of today's force reduction!

I have made it through over 500 force reductions since the
government decided to split up the telephone company back in
1983, and I thought that if I could make it through the next
two force reductions I would finally be on easy street.

Unfortunately, that did not happen.

It's been a long run at 37-1/2 years here, and it's kind of
scary thinking about the fact that I will be out of a job
for the first time in my life!

Dave,

I don't like the DX667 vecause of the dirty single ended
driver stage, but it whould work fine in 6 meters with a
reduced output and higher input and output swrs.

To everyone else on the newsgroup; it's been fun, even in
the bad times, but everything has to come to an end sooner
or later.

Regards,

Dennis O.

>Dave
>"Sandbagger"

I would have invalidated you earlier but I had to step into the real world for a while. You really have a problem with context and implications......how about reading just what is written in it's entirety (like your posts boasting of spying on other cb/hammie ops) and forget about what isn't there. You are the only person on this group having a problem with others posts claiming "implications" that no others can see but you. Not to worry, grasshopper, you have but one day left of getting shown the light before your concoction of an imaginary and self-imposed exile (talk about a nut) from Twistedhed....

In todays workforce and economical climate, I feel for ya'.....but I have no doubt that unemployment will be a problem for you for any serious length of time. Hell, you can always become a consultant,,,,everyone seems to be doing that now so there must be something there somewhere.....
Plus, you know those layoffs have spawned a few entrepeneurs taking their ingenuity and morphing themselves into millionaires....

> I have made it through over 500 force >reductions since the government decided to >split up the telephone company back in 1983, >and I thought that if I could make it through the >next two force reductions I would finally be on >easy street.

Damn, you're an old dude <g>! I know Lucent isn't the darling stock it used to be, but I haven't looked at it in quite some time.....it always scared me, even though that stock made many people rich at one time.....I just couldn't come to recognize it as a true blue chip buy at the time (my loss)...I'm too conservative in that arena.....
That deregulation hurt another person I know that was with our local phone company back then. He came out ok, but decided to end his work search and retire. Good luck with your endeavors and best wishes for prosperity.

No problem if it's legal. But the topic here is illegal use -- not excuses to keep multi kw amps ready for sporadic illegal use.

>Yep, I know first hand of hundreds of large amplifier people who chat

So if this "large amplfier" subculture is all above board, legal, and factual, how about some names and callsigns for verification? Or how about the name of the net list server? Or how about your callsign? No reason to hide it if you're operation is above board.

OK, well now we finally come to the truth. This thread about hams operating over 1500 watts does not refer to most hams...or even "many" hams. It refers to the "big amplifier" crowd that you are part of -- a rather small minority and elitist group who, by your own admission, gravitiate to problem frequencies where they feel they are above the law and justified in using illegal RF power.

Pretty sad skipp, and not representative of mainstream ham radio. Sorta like you.

You would need an amp to make any useful power boost.
Why do you need more channels?
Isnt 40 channels of cursing and profanity enough? :)

Amps are not legal.
However receive amps are legal, but will pull in more noise.
You wont gain a whole lot unless you use a powerful amp, which will be
costly and will drain your batt.

>The term "Breaker Breaker" has never been >associated with ham radio.
It's something that >grew out of the CB fad in the late 70's.

And remains so today. Could it be the sterling examples of hammie radio,
such as yourself that down those that have opposing views, hurl insults,
lie about, deliberately misquote and misattribute, make personal remarks
and off topic barbs, deliver deliberate disinformation, then put a call
at the end of their foolish diatribe
and clamor that by virtue of that call you demand respect? Why yes, I do
believe that may be construed as aiding in the dumbing down and
assaulting of hammie radio.

>An unfortunate truth is that the general public >views CBers as a
lawless bunch of anarchists,

The unadulterated truth is the general public holds hammie radio the
same as cb..breaker breaker. They don't care, Dave,,the public at large
does not share your hellfire and brimstone burning passion that cbers
are anarchists...they see you as a cber...and it chaps your azz because
you "demand" respect and recognition and that the public know the
difference.....hahahahaha!

>who blatently disregard the rules of radio law >and are the cause of
the vast majority of >interference to home entertainment >equipment.

You aren't up to speed. Even the lowly Lelnad is aware manufacturers are
to largely to blame for poor designs. The stickers on consumer products
confirm they MUST accept any interference...so it isn;'t like you make
it out to be at all.

>Which is why there are more and more laws >being proposed to regulate CB radio at the >local level, since the feds have been doing a >poor job of it themselves. It is also a good

How many laws are you claiming were proposed, Hall?

>reason why you can't buy a new home in a >development without some sort of antenna >restriction.

Is your head always in the sand or haven't you looked outside your neighborhood yet? Tell ya' what...when you buy your first home, come back and relate your experience...until then, you shouldn't make erroneous, misinformed and wrong comments.

>I can't say that I would blame any ham that >would want to put to rest any notion that ham >radio, is connected in any way to that image.
>Dave
>"Sandbagger"

It's only you and the idiot box that "Aaron" named of Lelnad C. Scott KC8LDO, Frank Gilliland, Dogie Adair N8WWM and the occasional "blip" from JerryO whining about the image of hammie radio. Check it out...cbers had nothing to do with the "image" of hammie radio. Hammies like you blacked that eye all by yourselves, no matter how you try to blame others.

I've only been using my scopes for about 25 years, but I can't figure out what you're talking about. "wide"? Are you talking about a "bandscope"? That would tell me a signal's bandwidth, but nothing really about it's absolute power level at the transmitter.

Measuring the peak amplitude only tells me how strong the signal is locally, and I already can know that by comparing it to a known signal source through attenuators.

Breaker, breaker it's amateur ham radio.
>Another "bright" person, who doesn't know the >difference between ham
>radio and CB.......
>Dave
>"Sandbagger"

A very bright person....he is merely telling you like it is...the
public's perception.

>Hams do not use the term "Breaker Breaker".<

It's not I you have to convince, as usual...it's the rest of the world.
Damn dude, you act like you're fighting for your life.

>If the public cannot differentiate ham radio >from CB, then the folks
at the ARRL have >some PR work ahead of them.

Oh boy!
They will fix things.
Priority 1 according to socialist Dave Hall is making certain others see
his hobby as he thinks they should...LMAO!

You're not very good at seeing other views. Some of us are reeling and
rolling over your self-contradictory claims:
In one post you claim skip is the MAIN problem on cb. In yet another you
claim amps are the MAIN problem.

>Not true. I said, that amps are one of the >primary reasons why the
noise level is so high >during a band opening.

Yea, you said that, but you also claimed that amps were the main cause
of cb being not usable.

>The fact that people engage in skip talking is >yet another reason for
the noise.
>Learn to read for content.

You're the only one having the comprehension and implication problems.

In one post, you claimed those that freeband are federal criminals for
breaking what you call "Federal Law".
Yet when a hammie receives a letter from the FCC for rule violation, you

begin your ornithilogical dining of big black crow. So with your illogic, a cber is a federal criminal for violating any rule, no matter how minor, but if it's a hammie doing the same thing, you somehow exonerate their "criminal status" in your tiny mind.

>I said no such thing. Hams, who break the >law, are just as guilty as CBer's. I make NO >distinction.

So all those that received letters from the FCC for one form of a violation or another are federal criminals?

In one post you claimed that escaping to the freeband isn't so bad and that you have no problem with it.
In another, you claim the opposite and say they are criminals not respecting society.

>And I keep pointing out to you, that there is a >difference between how I feel about a >situation, and what the letter of the law states.

The letter of the law has nothing to do with you self-contradicting yourself. Nothing at all.

>Personally, I don't care who runs on freeband, >as long as they are not causing interference to >legal stations there, or on the adjacent ham >bands. But regardless HOW *I* (or you) feel >about the situation, it is still in violation of the >law.

Then why do you bust peoples chops for freebanding if, as you said, it "doesn't bother you?"
Because you're a trolling member of Aarons gang of trouble, named exclusively by Aaron himself..

In one post you claim that actions reflect deterioration of society as a whole.

>This I remember saying, <

Good. You are on the wagon at times......

>but more accurately, the decline in moral >values, has predicated the slow decline in civil >society, and has given way to an "I do what I >want, and tough shit to anyone who feels >differently" attitude.

You damn right. As long as my actions are not infringing on yours, it's none of your damn business, although you have continually made such things your business repeatedly over the years.

>and I still feel that it's true.<

Probably because it is. I don't give a damn what you think of me freebanding , DX shootin' or
training the dogs.

In another, you feel your actions and behavior are an exception to what you hold others to because your personal feelings toward another dictate

exemption.

>I never made that statement. More inaccurate >paraphrasing on your
part?
>Dave
>"Sandbagger"

It was your action.
You claimed that you treated people well and this and that......
After I got up off the floor from laughing so hard, it wasn't but 2
posts later where you claimed an exception for your boorish behavior
that I pointed out. You made an exception, going so far as to even
admitting that you singled out ME for your verbal assaults. This
indicates you made an exception in your personal code of conduct because
you couldn't control your emotions. You actually CHANGED your personal
admitted behavior and contradicted yourself by committing such acts.
The best part was your pitiful defense attempting to justify your
attacks by sharing with us the hallucination from DT's you see that you
claim say "kick me".
Even that wasn't original.
It was a poor spinoff from the "T" tattooed on the Trouble-posses
foreheads, but, yes we get the gist of it, and, it's alright!!!!

Your guessing is aghast and never correct.

>It must be, you didn't deny it.<

Yea, Dogie N8WWM LOVED that line.
You guys share everything?

>Were we talking about Rabbit Ears?

No.

>Yes. I was.<

No, you weren't.
You entered him into the equation yet at the same time took issue with
me for mentioning the hammies you called federal criminals because they
were not ALL running power,as if that had anything at all to do with
thembreaking what you say is FEDERAL LAW
which makes them FEDERAL CRIMINALS.
What's good for the goose......

>You seem to think that mentioning hams, who >are also guilty of
breaking the law would >somehow "bother" me.

Not at all...I merely want to point out that you have refrained, at
every turn, from calling those hammies that receieve notices or warning
letters from the FCCC
"federal criminals" like you have referrred to cbers several hundred
times for breaking the same exact rules....such as out of band. How
about not IDing on time? It's a RULE (IE: FEDERAL LAW according to you.)
Are they federal criminals, too? Hahhahahah!

>As far as I'm concerned, <

What you concern yourself with is of no consequence to anyone
here....promise.

>Operating a radio is not a "right", it's a >"privilege". And like all privileges, it comes with >associated responsibilities. If you can't abide >by your responsibility (Which usually means to >follow the rules), then you stand to lose that >privilege.

Yea, as I said, all you posse members have lostISP's for noncompliance with the rules. That makes everything that comes from any of your mouths invalid.

>In the case of hams, that would be their >license.

In your specific case, it was your self-respect. I can't figure out if you ever had any or if you just can't understand what you are doing to ammie radio. As was shown, you don't see yourself as others do.

>In the case of freebanders, it would be >forfeiture of equipment, monetary fines, and/or >incarceration.
>Our prisons are full of people who have >forsaken their responsibilities, to live >harmoniously within our society, and as a >result have lost the privilege of freedom.

Bullshit. Our prisons majority populations are made up of nonviolent drug offenders.

>It's the price you pay for being a sociopath.

I don't pay any price...but I have a feeling you will never learn of the price YOU have paid through your eye teeth among these pages.

>He's a shining example of an outlaw mentality >gone horribly wrong.

And you're a blackeye to hammie radio.

>You might be a few pegs up the ladder from >him, but you're just as >guilty of breaking federal law.

Am I as guilty as the hammies in the rain report each week? They are federal criminals by your logic, are they not?

>Yes, and yes.<

See, that wasn't painful now, was it?

We don't do what Rabbit Ears did.

>Who is "we"?
>Wait a sec..you just said in aother post "So >*WE* don't think you're a blooming idiot."
>That's "babbling idiot".

If you are going to quote me, please get it right.

>In that case "we" refered to other members of >the newsgroup. In your case, who "we" refers >to is unclear.

Only because you snipped it to intentionally make it seem that way. The "we" referred

to are freebanders.
I was so kind as to provide you with an answer, let's see if you can return in kind. Who on this ng do you feel shares you views besides the obvious trouble posse named by Aaron of KC8LDO Lelnad C. Scott, Frank Gilliland, N8WWM Dogie Adair, and yourself,,,oh yea...and JerryO sometimes.

>Is "we" anyone who abandons CB rules, >including freebanders, amp jockeys, and just >plain foul mouths?

You know my answer was freebanders and intentionally deleted it. You're hacking my posts when I have presented yours unedited and intact. Even Lelnad has done a better job
of hacking my posts, but you're welcome to continue your self-destruction.

>Or are you refering to a particular segment of >illegal radio operators?
>"Yep, we illegal freebanders, are not as bad >as those guys running amps. We break the >rules with a bit more class."

I love talking to you when you're drunk, Dave...your hypocrisy comes shining through brilliantly.

>Once again:
>Hypocricy
>1. Possessing of beliefs or virtues, one doesn't >possess. Now, what belief or virtue do I >espouse (another word for you), that I do not >embrace personally?

All of them. Every last one.
You are the epitome, along with the others Frank named, of the lousiest example of hammie radio ops.

>Are you speaking for all radio outlaws again >here?

When I said "we". I referred to freebanders , an in they do not, for the most part act like Rabbit Ears

>You're a "better class" of criminal. Sort of like >how murderers and drug dealers look upon >child molesters with contempt.

Again, you hold true to trouble-posse guidelines. You and Lelnad both talk about the molestation of children as some kind of joke or analogy to cbers/hammies selectively breaking a rule or 2. Frank really knew who he was naming didn't he?

>All guilty of breaking federal law.
.
.to your indiscretions.

>Which are? <

The repeated lies were enough for one week. More in due time if you wanna play, but I strongly urge you to take your admitted personal grudge with me to email

>I have no desire to waste time in an e-mail >exchange with you. It would be >counterproductive,

Sure it would......to you. It would prove yet another lie concerning one of your claims.

>and much less entertaining for those of us >who enjoy watching you spin.

The spin is all you.

>so as not to subject the group to anymore of >your enjoyment you get by using the group as >your personal tool to "yank: my chain.

>Some people have actively encouraged me to >continue.

I'm not surprised. They tried and lost ISP's and figured this time it would be you whose head went to the chopping block...you're a sacrificial lamb.

>But I really would rather stick to pointing out >the flaws in your twisted logic, and citing >example after example of how you are not a >"good citizen".

(Giggle) You do that and I'll continue just as I always have, of pointing out your lies.

It really hurts hammie radio to see a grown man that uses his call in his sig act as such.

>It would hurt much more if I hid behind an >anonymous "handle", thereby casting doubt as >to the sincerity of my words.

Your words have done nothing but damage the image you profess to care so much about.
I am beginning to feel bad about exploiting and taking such advantage of your ignorance.

And that would have what remote connection to a simple freebander getting a warning letter for the first, second, maybe third time? And have you EVER found a cber guilty of the "Federal Crime" you say exists of DXing?
>Still living by the old "it's only illegal if I'm >caught" mentality.

It's not a mentality, it's a reality.

>Such is the root of your anti-social disorder.

Freud! Mao! Plato! Socrates! Any of them, but for God's sake...get an education, one that willl allow you to move beyond your daughter's Dr. Seuss dictionary.

>By that logic, that sniper, who's terrorizing the >mid-atlantic area, >will not technically be a "criminal" until we >finally catch him eh?

By any logic, you were shorted.

The ignorance is flowing from you today isn;t it? Speeding can directly kill an innocent and has done so in the past. Freebanding between 11 and 10 meters hasn't.

>And the former CEO's of companies like >Enron and IMclone will be >getting fines and jail time for "only" falsifying >company accounts and misstating earnings. >No one died here either. So much for your >(il)logic.

And Kevin Mitnick is getting his hammie license back and no one died. What's the connection, or are you half into the sauce now?

Oh, I'm sorry, did I wound you again? You don;'t know who Kevin Mitnick is...that's ok.

>A speeding ticket won't land you a $25,000 >fine or 15 months in jail either.

Neither will simple DXing and freebanding between 10 and 11. It will get you, at the most, a warning letter the first time. Don't cause a problem and the letter is a given.

>And if you continue to operate illegally after >the "warning", what do >you think will eventually happen?
>"Rabbit Ears" got a "warning" too.

Rabbit ears got what he deserved.

>Too bad he, like you, doesn't take the law >seriously.

Seer malady.

>And the federal gov't doesn't issue speeding >tickets either. Let's >review now shall we boys and girls:

Can you say "patronizing?"

>Sure. PA-tro-niz-ing. <

Good grasshopper.

How come all these hammies aren't in jail that receive notices each week? Why aren't they all paying fines? Because what you say simply doesn't take place, these people are not federal criminals, and a warning letter is always sent first. You failed (yet again) to mention that.

>There's a big difference in the severity of the >offense, between a ham that unknowingly >failed to I.D. once or twice, and someone who >willfully and repeatedly ignores radio rules.

You are ASSuming they forgot to ID. What about the thoses that REFUSE to ID? No difference, Hall, only in your tiny mind.

>And your whole position is predicated (another >word for your >vocabulary)

My, you are certainly coming along since my education of you, grasshopper. I even forced you to open a junior high level dictionary after you found the urine staned thing and sprayed it with Old Spice so you could get near it.

>Can YOU say patronizing?<

Sure, and I can enunciate it correctly, unlike yourself. Did you get THAt from the same dictionary?

>on the fact that you are free to ignore the law, >until you get cited >because the first offense is usually a warning. >After the "warning" do you now take the law >seriously, or do you continue in your >irresponsible defiance?

You are into an entire different area.
You have sunk your ship.

>Nah! The bilge pump is more than sufficient to >pump out what you sling in.
>Dave
>"Sandbagger"

The only "pump" concerning you would come from Lelnad or Dogie.

Another lie. Your post concerning your spying was presented in full.

Dave Hal lied with:
>No, it wasn't. You convieniently left out the >person who I was
responding to, which would >have put it in the proper context.

You are still lying...I didn't leave out anything and those that
bothered to check have seen for themselves that post was presented in
it's unedited entirety. You crying because I didn't include ANOTHER
post, and claiming it was edited from yours, is more bullshit and more
lies from you.

>You should work for the
>democratic party. You're as slippery as the >best of them.

They can't afford me, but neither can the Republicans.

More division. At a time when the country needs to put petty political
domestic issues aside more than ever and pull together, we have blooming
algae like you that would prefer to further divide our united efforts.

>Tell that to the democrats, <

Nah, I just told it you. Youare the one seeking division in all facets
of your life.

>But don't start talking about politics.<

I didn't you did and forgtot already. Lush. Hahah!

What? Forget again and look at it today during sobriety and realize it
was YOU that brought it up? Hahahahaha...you're spent dude, and by
looking at the time, you are probably well inot the sauce by now.

>The real joke, that you still don't get: I *AM* a >CBer!

You are the real joke, Dave, I just haven't decide to reveal all the
punch lines yet or to let you in on them.

>Well, you'd better do it soon. I'm putting you >back in your cage on
Friday. Dave
"Sandbagger"

You're plagiarizing me again. Ive had cages for the AKC since one man
gang was whoppin' up on 'em along with phone man making Dogie look like
a cber with a bad case of Tourettes.

>Ok, then. I usually skip posts that start off with >"XYZ is GAY!" or
"Dogie is a fag" as they are >nothing more than juvenile mud slinging,

so I >missed that reference.

Dave, I'm not hounding you for defending N8, I'm pointing out that you are part of his little band of merry gay men that enjoy causing trouble, as Aaron named you (Dave Hall) Lelnad C. Scott KC8LDO, and Frank Gilliland and Dogie Adair N8WWM as his party.

>So I'll change it to "I'm putting you back in your >BOX, by Friday", which means that as of the >end of today, we're done here.
>Dave
>"Sandbagger

I don't blame yo. Paying child support and being a part-time father, you couldn't afford to lose another access site or ISP.

> http://www.advancedreceiver.com/page7.html

In fact, there's one on Ebay now, that's at $10.
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1389544503

I'm sure that it will stretch down to 27 MHz.

I have a couple similar units, one on the club 2M repeater, and one on my mobile SSTV rig.
Very well behaved.

Welfare Check <Check@demonseed.compton> wrote:

: Skipp, we know how it can be done, but by your inference you can just like
: jump on a frequency and know that a ham is running excess power, You of
: course want him to do your homework and tell you what antenna he is using
: the size of his tube, his grandsons birthdate etc etc . You are asking him
: to provide oyu with the info so you are setting up a test situation

As most people do, I tend to stay on similar frequencies during my radio activities... I know a good number of the people at those locations and quite a bit about their stations and location. Upon review, I'm sure you will verify to yourself (as others would) that your operations tend to stay similar in modes, frequencies and times... You have friends that know you on the frequencies you frequent...? wha'la...

:> I know the general makeup of his station and use it as a relative
:> S-meter reference.

: Ok so now you have a test situation since you have known variables, jump on
: a freq where you don't know the operator and what type antenna he is using,
: what amp he is using, look at your calibrated s meter and then tell me how
: many watts he is running. Anyone can set up a test situation Skipp and
: control some of the variables yes,. your making it sound like you can
: determine peoples general location etc just from your s meter.

I would not tend to jump on a frequency and make power claims against stations I have no knowledge of. I probably wouldn't care really notice a stations s-meter level unless they were jamming, playing music or similar crap.

Statements I made earlier were about high power operation of hams I do know about. According to boobner (mr fake name), said people are few... I don't agree. I get the impression he has not spent much time on the hf bands.

:> near Eric. A few other friends on the band have beams which point toward
:> the same area as Eric and the jammer.

: Thought most of the guys used wire antennas on the low bands now they all
: have beams LOL ok Skipp

Notice the word "few"... and yes, most lower hf band people use wire antennas. If you were down there much yourself, you'd quit acting the bafoon with such statements because you'd know the general facts yourself. No one is making this stuff up as we go along... some of us have been there, done that coffee mug and tee shirt.

:> Some of us have direction finding equipment...
: Bravo, do you have one for 80 meters?

More than one... a simple df wire loop is easy for many people to build
and works well. I also know the patterns of my antennas pretty well.

:> Eric can also hear the jammer on ground wave... Now the jammer is mad
:> because he's not able to take Eric out. His signal jumps up +13 to +20
:> dB.

: Typical cber

I don't hear a lot of CB'ers using terms like ground wave. I would not be
surprised if the jammer had a past history operating in the cb band. Your
answer says nothing, but it does indicate your weak on understanding hf
propagation.

:> It would be more than reasonable to assume the jammer has kicked his
:> amplifier on. His now +13 dB signal increase would lead most people to
:> understand that he is running serious gas.

: Well Skipp if he is a jammer it is reasobable to think he is also running an
: amp i didn't need a fancy s meter for that. But try you your same trick when
: you don't know a persons antenna , his tube size, or his location. You can't
: do it no matter how you try and spin it.

I probably would not try it... I would not spin, nor did I ever say that
I could. I do make a case that certain things can be assumed when the
information works in logical form.

: Tell us where these 2 guys are located. knowing this info, you are on
: 14.195, lets say you have a beam you are tuning around dead east of you you
: lock onto a signal s-9 it is a female ham, seconds later you hear another
: station he talks for a bit and you get him at s-9 as well. Does this mean
: they are both in the same location running the same power? Answer this then
: go on to the next question.

No and no...

It would be stupid to make assumptions using your example. If you review
my example, you'll find I make assumptions based on what I trust is good
information and measurements I can support.

I would not approach your example as you present it... sorry, homey don't
play your silly game.

: Now the female ham is running 100 watts into a 3 element tri bander, the
: male ham is running 1000 watts into a dipole. Are they in the same general
: area ?

One would need more information and some experiece operating on 20 meters.
I don't frequent 20 meters much so I couldn't help you there.

: The female hams tower is located 250' away from the radio, she uses rg213,
: the male ham feeds his antenna with x amount of ladder line into a tuner.
: Are they in the same area?

Sad that she's losing all that signal in 250 feet plus of 213 coax.

"Ladder line into a tuner" ...? in your zeal to throw out dumb examples,
you've put your "hoof in mouth."

Get it right and throw it back to someone who cares to play your games...

: The female ham lives in a valley 20 feet below sea level the male ham lives
: on a hill are they in the same area? Same signal right?

Never ever the exact same signal... I live on one side of a mountain
from from a guy and we both live equal distance from another ham near the
Martinez Straights waterfront, greater than 25 south of us. All three of
us punch in similar signals to various stations on the US West Coast when
we run similar power levels during average band conditions.

If any one uses higher power, its easily noticed. If one of the
bunch uses serious gas, it gets really noticed... On S-meters, spectral
displays (like the typical Kenwood SM-220 with BS-8 option) and out of
the speaker.

:> Eric talks his same area station up to the legal limit, the jammer has him
:> by +6 to +10 dB signal strenght.

: He may have been talking on a dipole and went to a beam as well you can only
: assume.

With experience, one learns how different antennas change signal levels. I
would expect a vertical to be modest, an inverted vee or dipole to be
better and a full size 2 element beam to work very well. Beams on 40 and
80 meters are not practical for most people. But they are used by a number
of people.

If your going to try and waste time with poor examples, frame them
up better and people might go through them. If you learn one thing out of
all of this finger air... it might be worth all the trouble.

:> from physical size. Both CB'ers and Hams dont often have a problem
:> telling you what type of antenna they are using.

: Skipp now your hopeing the operator tells you what type of antenna they are
: using I thought you could tell the difference so how can you tell if it is
: from a beam or an amp ? Without prior knowledge after all you said *You*
: could tell the difference, so now you want the op to tip you off ... LOL
: Skipp go back to bed OM

If they don't tell you what antenna they are using, you use what you have.
A nearby station running full tilt into a "good antenna" should not be 6
to 10 dB lower than the jammer over the average.

Another issue which I didn't mention was that other people on the band
provide signal level reports of the jammer. You know the
general band propagation from the jammer area to the other stations. More
very usefull information...

: Sorry Skipp now you want the operator to tell you the tube he is running I
: thought you could tell by just looking at your s meter.

It's ok to be sorry... you can deal with that on your own terms. But I
don't have to have first hand knowlege of the jamming stations antenna.
Hard to believe how clueless some of you are on this topic.

Message-ID: <u8Hr9.77507$uF6.269619@rwcrnsc52.ops.asp.att.net>
Source record: 140564

If you plan on using a wire antenna, be carful on how you terminate the ends
of the wire. If you don't and you put enough power into the wire, you can
create a corona discharge. I did this to my wire dipole I had in my back yard.
At that time all I did was bend the wire to hook around a rope. I go in and tune
my station for operation and along comes a sudden rise in SWR. I go out back
and see one side of my wire dipole hanging with what's left of the rope on fire.
I would hate to see this happen in the attic of your new house.
Now I have big loops on the ends and large ceramic insulators. I still would
not feel comfortable enough to put it in an attic.

Hope this helps
Tom

How were the ends terminated before the mod?

The ends of a dipole are the ends of two 1/4 wave elements, and of course that's a voltage node, so corona discharge, especially at resonance, is always a factor. The SWR bump may have happened when the antenna end arced through, lengthening that end in a carbonized rope resistor that obviously wasn't rated for the load

Good advice though, nobody needs an attic fire!
Of course I can think of another way to keep that from happening... :)

Tunable loop antennas are pretty interesting. I don't have an attic to put one in, but I'm considering it for the back yard, to replace my Antron-99 vertical. They cut down a lot on the noise, since they are narrowband antennas, but of course you have to re-tune when you move around. These are also known to have corona discharges, and should be kept clean.

I'm in Muncie IN..

Dayton's always a gas. I actually saw a real mechanical doppler DF antenna

: Dave Hall <nojunk_n3cvj@worldlynx.net> wrote:

:> A nearby "known station" is a good reference signal.

: That's really hard to do, considering the ever changing band conditions
: (We are talking about DX stations right?).

No, I never mentioned the words dx that I know about. I refer to typical operations I might hear on say... the 80 and 40 meter bands. Experience on the band of topic is a serious part of the information base to make logical assumptions.

:> Not all signals are received via F Layer, each event is different.

: Which muddies the water even more. There are so many variables in this
: equation, it's going to be tough to come up with the real truth.

Things do average out over time... we're not talking hit and run. Many jammers are on for quite some time.

:> : Add to that the wide variation of antennas. Who would be stronger, the
:> : guy running 2Kw into a half-wave dipole, or the guy running 500 watts
:> : into a 3 element yagi? What about feedline losses?, polarization?,
:> : ground conductivity?. These are all factors that would make a positive
:> : determination of power output from a distance, to be nearly impossible.
:>
:> Two adjacent stations, one at the legal limit (and known equipment)
:> compared to the much louder second station. The second station tells you
:> he's running __________ type of antenna. Should he be +6 to +10 dB louder
:> after the antenna is figured into the comparison... Nope.

: Maybe. Depends on which direction the first station's antenna's primary
: lobe is facing, his angle of radiation, and whether or not it is mounted
: in the best position and height, for the distance from his station to
: yours, and his overall HAAT.

Again, over an average and based on my experience with certain types of antennas I know, I sum the information to make a logical guess. See my just posted example of three stations in Northern California.

: And how many times do you get two guys that live next door to each
: other, for whome you can make a valid A/B comparison? In the real world
: of DX pileups, there will be a bunch of guys that are all over the globe
: (or the country depending on the band), who's signals are all over the
: place. Do you assume that the W5 station, who's head and shoulders above
: most of the rest of the pack is running a bit hot, if there isn't
: another W5 station to compare to?

I never went the dx route... but on certain bands at certain times,
stations only have to be in regional areas to have similar signals.

:> Another indication of excessive power are the spectral product levels of
:> his signal. One can often hear nearby spectal poop and the signal in
:> questions' bandwidth increase.

: That is only an indication of compression and overdriving, or an amp
: that's seriously out of tune, or with the ALC disconnected. You can have
: that distortion at any power level. It's not exclusive to "high power"
: amps.

True, but few amplifier owner actually know how to actually tune their
amplifiers for best linear operation. Most go for max smoke...

Loud mis-tuned amplifiers make more poop.

ALC is a waste of time... (another whole thread topic I'm sure).

:> : You could make an assumption, that if a group of guys, all yaking it up
:> : in one place, say Texas, and are all coming in within 1 S unit of each
:> : other, except for one guy, who is 20 db stronger, that that one guy has
:> : a few too many "logs on the fire", and you might be right. Assuming that
:> : the other guys are all running the legal limit to start with, and not
:> : just the "barefoot" 100 watts from an HF rig only.
:>
:> There you go... ding..! With experience and knowledge, you can expand
:> the above to various bands, locations and conditions. Most people are
:> creatures of habit... over the average you get the big picture.

: Careful! If you study these patterns over time, twistedhed will accuse
: you of "spying" on them....

The subject would have to first interest me...

:> People seem to think that one has to have an amplifier with no head room,
:> or that there no valid reasons for having serious gas... when there are
:> applications and occassions where lots of power is legal and good.

: That's one of the reasons hams are given the authority and
: responsibility to verify that their power output is within specs. There
: is nothing wrong, and in most cases is much better for the life of the
: amp, to have it loaf along at 1.5KW, then to be "balls to the wall" to
: make that same 1.5KW.

That is a much debated topic on the list server I mentioned.

:> : Sure. Much like guys like to build cars with 1000 HP engines, and then
:> : drive them on the street where the speed limit is 55.
:>
:> Christmas, are they up to 1000 hp now... I don't really follow that
:> "hobby" much. But the result is the same...

: Sure. A blown big block, can easily make 1000 HP. Some of my closest
: friends run engines like this in their boats. Mine is only a measly 425

: HP though.....
: Dave
: "Sandbagger"

Man, see how out of touch I am with motors these days... I used to live to work on cars... now I don't want to spend more than the time for tune ups, lube and washing if I can help it. Plus it can be as expensive as high power amplifiers plus 20 dB.

cheers
skipp

Whoa hold on there bobbalouie this thread is not about being able to tell a
jammer etc so don't start trying to Twist the thread into that Skipp.

>
> Another issue which I didn't mention was that other people on the band
provide signal level reports of the jammer. You know the
> general band propagation from the jammer area to the other stations. More
very usefull information...

Skipp no one but you is mentioning jammers were talking about you being able
to use your smeter to tell where people are now you want to add all types of
variable other stations, jammers etc come one skipp

> : Sorry Skipp now you want the operator to tell you the tube he is running
I
> : thought you could tell by just looking at your s meter.
>
> It's ok to be sorry... you can deal with that on your own terms. But I
> don't have to have first hand knowlege of the jamming stations antenna.

Again Skippy no one but you is bringing up jamming stations and only now you
do to sidestep and tap dance around. You and I both know you have no way of
telling what a guy is running . Unless yuo have help from other stations,

the operator telling you what he is running etc.

> Hard to believe how clueless some of you are on this topic.

Hard to believe you are twisiting the thread to jammers now LOL I Rephrase that perhaps it isnt that hard to beleive. Yoy started out saying you can tell people running power from your smeter now it is about a jammer and other hams giving you insight to his signal etc. Back to bed you go

:>there are applications and occassions where lots of power is legal
:>and good.

: No problem if it's legal. But the topic here is illegal use -- not
: excuses to keep multi kw amps ready for sporadic illegal use.

Both are done... you seem to think it is not... no one is making excuses
that I've heard...

: So if this "large amplfier" subculture is all above board, legal, and
: factual, how about some names and callsigns for verification? Or how
: about the name of the net list server? Or how about your callsign? No
: reason to hide it if you're operation is above board.

How about you go and find them yourself... a quick web search would do it
for you. Semi regular members of this news group have been seen in these
groups, some stay, some leave. Some are kicked out/off...

Callsigns do nothing to support the topic. Anyone with any common sense
would not give you their callsign or personal information because of the
way you and others on the net act. How about you come out first and
give your real name out... sort through your fake name business first...

:>Some of the high power people are in Broadcasting, some in Research,
: some
:>live in other countries... many are hams. Few run real gas on the
:>Amatuer Bands unless there is a reason. You would be surprised to
: know
:>about some of the really really large amplifiers in operation around
: the
:>world.
:>
:>cheers
:>skipp

: OK, well now we finally come to the truth. This thread about hams
: operating over 1500 watts does not refer to most hams...or even "many"

Never said most... you want to assign "many" some number value. I posted
in excess of 100 of which I know to be a low number. I would call that
many instead of a few because I can hear them on the air. One jammer is
more than enough.

: hams. It refers to the "big amplifier" crowd that you are part of --
: a rather small minority and elitist group who, by your own admission,

Relative to the whole number of people using radios, yep they are a minority. I feel good about saying the bunch I know about are a group of many people in the hundreds... I actually would expect the number of large amplifier people to be in the thousands.

: gravitiate to problem frequencies where they feel they are above the
: law and justified in using illegal RF power.

Actually, its by observation. How they feel about their operation is something none of us have any control over. No one likes having music played over their conversation... Russia used to do it with over the horizon radar.... now it's done from across the country. I don't like it from any source... but it happens.

: Pretty sad skipp, and not representative of mainstream ham radio.
: Sorta like you.
: -Aaron-

Few care what you actually think fake boy. I'm happy to be outside the mainstream of radio. The center tends to be boaring...

When you get a moment, you might tell us how mainstream ham radio works...

I'll assume your life is probably pretty narrow and boaring... as indicated by my "News Group S-Meter."

Namaste to you too, skipp. But look, you made the claim that there are 200 or more hams who you personally know are running illegal high power. You said that this is fact and not opinion. I'll tell you what. Since documenting all 200 is a big hassle for you, email me 10 of their callsigns so I can check with them regarding the veracity of your statements. That's only 5% of the total number you claimed. I'm giving you a huge break. It shouldn't be a big deal. Also we're still waiting for the name of that "well-known" list server group you claimed as a fact. I'd like to read the postings there and maybe ask that group to verify that many of them operate illegal high power amplifiers, as claimed by "some guy named skipp" (no callsign given) in rec.radio.cb.

Hey Dave Hall,

I have to disagree with you on this one:

"An unfortunate truth is that the general public views CBers as a lawless bunch of anarchists, who blatantly disregard the rules of radio law and are the cause of the vast majority of interference to home entertainment equipment. Which is why there are more and more laws being proposed to regulate CB radio at the local level, since the feds have been doing a poor job of it themselves. It is also a good reason why you can't buy a new home in a development without some sort of antenna restriction. I can't say that I would blame any ham that would want to put to rest any notion that ham radio, is connected in any way to that image.

Dave
"Sandbagger""

CB is new to me so I can't claim years of experience or bucket loads of knowledge. I am not a Ham, and don't foresee going for a Ham ticket. I guess if you don't count my attempts to build everything but my radio then I'm just an appliance operator, but I have a hell of a lot of fun doing it! I'm slowly getting to a point, really I am. Just wanted to be clear on my position, no misrepresentation, ya understand.

From my experiance Dave, The public does not hold the view you posted above. In my experiance the public, not counting CB'ers and Hams's of course, looks at CB in a light tainted by only what they have seen in the movies. Most of those I encounter are full of questions as to why I have a CB in my work truck, my Jeep, and at home. They can't understand what I find so enjoyable. No one has ever talked about illegal operation or interferance unless they had prior experiance with CB & Amature radio. I tend to believe that the majority of the public still view CB in a "Smokey and the Bandit" kind of way. As soon as I mention something about CB I often get some trite CB jargon thrown at me in a horrible southern accent. Takes a bit to expalin to them what CB is and what they'll find if they fire their own station up.

There is a dark side to CB, but in my travels it would seem that only 10% of what is out there is negative. I spend my driving time on 17 (that's the calling freq here) and hit 19 when I'm into areas where 19 is the standard. While at home I monitor the truckers until the regulars get together on 27. Anytime I can't find someone on those freq to chat with I scan the bands and very little of my travels produced the negative asspects that is high on the topics list in RRCB. Are the bands really that bad around your "QTH"?

Dave

This can't be the group skipp is talking about. I scanned a couple
hundred topics in the archives and couldn't find even ONE where hams
discuss their use of illegal high power on the ham bands.

Still looking for posts in the list server that skipp claims shows
"many" hams operating illegal high power on the ham bands. Didn't find
ONE. But I did find this.....

Here, add these to your hit list. I have sent Riley these and haven't
heard anything either.... davemade amps rival California kw's, anybody
want a 30kw mobile amp??

http://www.bigradios.com/bulldog/xforceamps.html out of new jersey,
complete with payment by paypal and a phone number.

Here is a site with buy/sell message board http://www.bigradios.com/

Still none as big as good old davemade
http://www.davemade.com/mobile.htm

Yes you are correct Mopar can't spell Busch is spelled Busch
About time you posted from that account again Randy.

1815. Free CB Crystal Mixing Charts

Newsgroup: rec.radio.cb
Date: 2002-10-18 02:26:26 UTC
From: Lou Franklin <lou@cbcintl.com>
Message-ID: <2csuqu4r9opmtktskrl22p10q9e5fu9oiv@4ax.com>
Source record: 140595
Cross-posted to: rec.radio.cb,rec.radio.swap

We've now added all our crystal charts for free download/printing (PDF) on our site. These 32 charts cover about 95% of all American mobile & base CB models, and show exactly which crystal(s) affects which mode or channel. Very useful for troubleshooting "dead channels" symptom, or for modification to 10M or other freqs.

Check 'em out at: www.cbcintl.com/xtals/xtals.htm

We specialize in CB books, plans, kits, and high-performance CB accessories. Please visit our Web site to see all those "goodies" you just can't find anywhere else!

www.cbcintl.com

You can also download our complete CB catalog, or just the Order Form from the home page. We've also got a new Email Order Form (for VISA/MC) if you're in a hurry.

* *
In case you didn't already know...

Who are we? Since 1976 we've been the leading supplier of books, plans, and kits just for CB radio. Do-it-yourself repairs and modifications, 10-Meter Ham conversions, amplifiers, FM converters, bleedover filters, adding new frequencies, etc. Secrets of how to increase your power, range, and privacy.

For product questions or additional details
on what we offer, please email us directly at:

To learn the TRUTH about CB Radio without all the hype from people who are just plain ignorant, check out the following books from CBC International. They're selling right now at a big discounts on our EBAY & AMAZON stores too.

Check it out! Go to this link:

http://cgi6.ebay.com/aw-cgi/eBayISAPI.dll?ViewSellersOtherItems&userid=lou@cbcintl.com&completed=0&sort=3&since=-1&include=0&page=1&rows=25

To see exactly what these books look like, plus all the specific, chapter-by-chapter details, see our Web at:

www.cbcintl.com

Some of the books included are:

BOOK #1: THE "SCREWDRIVER EXPERT'S" GUIDE To Peaking Out & Repairing CB Radios. List $25. The most popular "big dummy's" guide ever published on do-it-yourself CB repairs & modifications. Covers peaking of receivers, transmitters, modulation, mike problems, antenna & SWR problems, detailed frequency modifications for both crystal & PLL radios. Loaded with charts, illustrations, and specific instructions for most brands including the new export models. This latest edition also covers slider and broadbanding tricks, FM conversions, and much more!

BOOK #2: THE CB PLL DATA BOOK. List $20. The only complete reference source on CB PLL synthesizer circuits ever published! Detailed PLL theory explained in layman's terms. How they work, and how to modify them for many more channels. Includes specific PLL block mixing diagrams, truth charts, & IC pin function diagrams for nearly every PLL chip ever used. Covers all the most popular U.S. & export chassis, with specific listings of all models using the chip.

BOOK #3: UNDERSTANDING & REPAIRING CB RADIOS. List $42. Giant 370-page technical book for the professional repairman. Picks up where the "SCREWDRIVER EXPERT'S" GUIDE leaves off. Includes circuit descriptions & troubleshooting guide for 23- & 40-Ch., crystal & PLL, solid-state & tube, AM, FM, SSB, CW, American & export models. Covers test equipment (& where to find it), transistor basics, synthesizers, receivers, transmitters, power supplies, T/R switching, antennas, interference, parts & accessory sources. Over 350 illustrations including schematics, charts, and photos. Huge subject index also lets you look up repairs by symptoms. This is "must" reading for any serious CB technician!

For details on our Galaxy-Ranger Service Manual (2nd Ed.) go to:

Hey Lou, since your charts that allow "for modification to 10M or other freqs." are obviously intended for use by licensed hams, you might get more business if you posted this in ham newsgroups. Doncha think?

You might be surprised, Ken.
A well-known Spaniard near Barcelona used to hang out around 14.210 or so. (may still be there) Rumor has it that he was delivering 20+ KW to a big Yagi. Not to say that he could not command the frequency, but he was only 16-18 db louder on the S-Meter than his European neighbors running legal-limit.

14 KW on the U.S. West Coast is probably about average nowadays...
When the P5 shows up someday on 14.195, Gov. Gray ("Gray-Out") Davis might have to quickly contract for more juice. After three days operation or so, a very skilled DX operator will be able to get a QSO with legal-limit power because of the split operation; unlike the old AM days when the "California Kilowatts" took up the entire window!

IMO, big power is run by wealthy DX'ers who need to get the "new one" in the log in less than an hour so they can get to the work place and earn their
six-figure salary. Another example is the very old-timer who is afraid he might
croak and not be at the top of the DXCC Honor Roll at the time.

DX'ers are a weird bunch...you work all your adult life to build and maintain
a formidable station, fill several shoe boxes with QSL cards and put awards on the wall. Then you die; some local buys your station for $500, your XYL throws the cards and awards in the dumpster, and your accomplishments are removed from all publications.

Since we are all destined to become a ground radial for a 6 meter vertical sooner or later, I say enjoy the hobby! Life is too short for screaming at the P5 for a week.

I would say that power on these bands is needed just to help with getting above the noise. I wouldn't say that it has so much to do with trying to overcome other operators.

>

Well, I respectfully disagree about the 400 W bit. The current legal limit helps a lot when band condx are barely there on 10m, 6m and so forth.

What's sad is that the fact that some guys decide to run 14KW. Then in order to overcome those guys, everyone else ratchets up their power a notch and in turn the original guys crank it up more, etc. So effectively, the noise floor on HF goes through the roof and the weak DX station somewhere up the band can no longer be heard.

Let's face it. Even if a 14KW amplifier has and -45 dBc 3rd order IM product, that power level is about half a watt which is enough to be heard round the world. If that amplifier has only -35 dBc IM, the IM products are now up to about 4 Watts (Basing this on the fact that 14KW is approximately 71 dBm).

Combine the fact of the extra intermod now produced by everyone with the intermod generated in everyone's receiver front end due to the strong carriers and we can now see why no one can hear the weak DX station.

I don't see the lure in running that kind of power. When I was building my 4-1000A, one ham told me that within a year I'd no longer find it sufficient and that I'd be building a bigger one. That was about 3 years ago. Nope, my single tube amp is fine for me. I am happy when I am running legal limit from a rood mounted crappy old TA-33 and some station in Siberia tells me I have broadcast quality audio and am coming in 30 to 40 dB over 9. That doesn't happen every day obviously but it's happened more than once. To me that's satisfying enough.

As far as the DX pileups go. I don't think it would be fun to run any more power. As it is, I feel that when running my amp it's like shooting fish in a barrel. I found DX work much more challenging when I was running 100W to a vertical. Yes, there are some pileups that I just can't crack like when some rare Pacific Island is on and I hear him 10 over 9 yet all he is working is the 6's running 14 KW. But that's part of the challenge. Sure, some have gotten away from me because of that, but why should I be a butthole just because they are?

73,

Jon

The power controversy has been going on for many years,
hence the slogan called, "California Kilowatt." Whether it
is practiced on the east or west coast or somewhere in between,
it really doesn't matter.
It comes down to operator skill, timing and most important...
how does the DX chaser hear.
Over the past 60 years there have been times when I stole
a great catch from the so called, Big Guns!
Something like AC4RF - ole Bob Ford.
Put the kilowatts away and hone up your skills.
Regards,
K4NV

Even though ham radio does get a lot of press occasionally when
helping out in some disaster or emergency situation, the general
public knows just about as little about ham radio as they do about
cb. They often think ham radio and cb are the same thing.

\
For accurate calibration, you must have a signal generator that
can accurately output in metered microvolts. All you need is RF,
no tone. You can't calibrate an s-meter for accuracy using a two
tone test from a transmitter.

Since you mention it, what ARE the standards on channels?

I'm just a poor ignorant ham, who left CB in 1977 when "The Number ONE SHOTGUN" ran me off channel 9 (and several other channels) when I had an accident victim bleeding to death in my arms, and the local react guy was trying to hear where I was to send help. I went home after that, ripped out my gear, and trashed it.

It's been about 25 years since that happened, so I'm not up to speed on that stuff.
9 and 19 is about all I know anymore.

Subject: Do HAMS use more than 1500 watts ?
To: amps@contesting.com

To: amps@contesting.com
From: aaronharoldvoobner@yahoo.com

Hi,

Recently a thread began in usenet newsgroup
rec.radio.cb. It was in the form of a question from a
fellow CB'er:

Subject: Do HAMS use more than 1500 watts ?

>This may be a silly question,but...if HAMS are
>legally allowed to use 1500 watts (,just as c.b.ers
>are allowed to use 5 watts a.m.) how can you tell if a
>HAM is using more than allowed ?
>Does this ever happen ?

A few replies came from licensed hams who posted their
callsigns and assured the poster that yes, it does
indeed happen, but illegal high power operation is by
no means representative of the mainstream of amateur
radio. In other words, compared to the vast majority
of hams, high-power illegal operators are considered
an unwanted minority.

There was however one poster who disagreed. He
identifies himself as ham named "skipp" (no callsign,
no last name). Please take a moment to read through
some excerpts of this person's advice to CB'ers.

In...

http://groups.google.com/groups?q=g:thl611469401d&dq=&hl=en&lr=&ie=UTF-8&safe=off&selm=aokpi6%246lq%244%40woodrow.ucdavis.edu&rnum=117

Skipp says...

There are many Hams and CB'ers that run power in
excess of the legal limit.

Hams in excess of the number 200 that I have first
hand knowlege of. Many are good friends of mine spread
through out the world. CB'ers..? Oh, I'd be willing
to say more than... 200 just for your answer. Hope
that's enough to make you happy. Various methods and
experience were used to base my statements. A
calibrated S-meter is one easily reproduced method to
make a comparison. My transceiver has one as most
do...

Power levels well in excess of 2000 watts were clearly
demonstrated to many of us in a well known web group.
I've mentioned it before right on rec.radio.cb

These people chime in from all over the world...

skipp
http://sonic.ucdavis.edu

Later in the same thread...

http://groups.google.com/groups?q=list+server+group+group:rec.radio.cb&hl=en&lr=&ie=UTF-8&
safe=off&selm=aok76m%24n88%242%40woodrow.ucdavis.edu&rnum=1

Skipp says....

Most hams are not capable of running twice the legal
power... a small percentage have large amplifiers
which have 8 to 13 dB of gain. Many... ie as in a
significant number build and operate amplifiers of >13
dB of gain. I guess the hundreds members of the list
server group I frequent are "just a few." Web sites
abound with pictures of these well built amplifiers.
You guys haven't been it the real world for some
time... get off the decafe..

Then in...

http://groups.google.com/groups?dq=&hl=en&lr=&ie=UTF-8&safe=off&threadm=aonf6r%24plr%244%4
0woodrow.ucdavis.edu&prev=/groups%3Fhl%3Den%26safe%3Doff%26group%3Drec.radio.cb

Skipp says...

My guess of greater than 100 amplifiers is more than
modestly low, made
for him only. Anyone actually operating real radios
knows that number is
unrealistic on the low side.

If your interested in the truth, pick up a magazine or
search the web...

I'll sleep well if you don't belive me...

The point of this entire thread on the original topic
was to let the
posting person know that hams can and do operate
amplifiers over the
legal limit. They are a relative number, but probably
more than one
would think exist.

Some get caught, most don't.

cheers
skipp

My question is, are "skipp's" claims accurate? Do they represent the majority views of amateur radio operators? Do they represent the majority views of licensed amateurs frequenting this list?

You may email me or post your comments to the list. Either way I thank you for your cooperation.

Sincerely,

A.H. Voobner

For one thing freebanding doesn't require the use of a syringe, or
dope pipe. Thus no rehab to worry about.

> or that bush would actually threaten our closest neighbor
> to the south over something so silly?

Look what happened when Libya's Muammar Qadhafi called Ronald Reagan
names, and dared him to cross a line in the water. A few bombs later,
and a near miss on his body, Qadhafi, you don't hear much from him any
more. Its just the principle of the thing that counts.

I suspect you already know this and more but here are my thoughts anyway:

In my area ch 17 is the main calling/trucking freq and most of the other areas I drive through 19 is the main calling/trucking freq. As far as I know ch 9 is dead, useless for emergency traffic, you'd have better luck calling out on what ever is the calling freq in an area. As for any other "designated channels" I don't know. There is a local group that gets together on 27, they're always good for a few hours of fun a night minimum. Just local friends chattin it up while doing stuff around the house in the evening (working on the truck, reading the paper, hiding out in the truck so the wife doesn't know you're "On that damn CB again" ect)

Sounds like a really shitty story Dave. I'm sorry to hear this happened to you. Unfortunately there are dicks out there who don't care and who will jam ect ect ect. I don't see an awful lot of this happening when I'm on CB. A few shouting matches with real vulgar language now again but not terribly often. Most annoying thing that happens often is truckers call out letting everyone know about the little hottie in the red Honda or whatever. I wouldn't care but I never get to see them and my girlfriend would just love to catch me checking out another gal. That would give her something to heckle me about, she'd tease me until I cracked.

It's easy. There are a set of rules that are used to keep everything organized and prevent an RF free-for-all. You impress nobody when you prove that you can cause more interfere than a solar coronal mass ejection. Just follow the rules and it will be smooth sailing. That's how mainstream radio works for ANY service.

1835. Which cb radio is the best out of these

>Ask any cop. if driving is a right or a privilege

Ever hear of the term "right-of-way"? A driver's license is indeed a
privilege, and it grants you certain rights that you would not have
otherwise. Like the right to operate a motor vehicle on US highways.
Lose the privilege and you lose those rights that come with the
privilege.

>A right is something you can do EVEN WITHOUT
>consent from the government.

Maybe you are confusing the definition of the term 'right' with it's use in the Declaration of Independance, where it's declared that each person has "certain unalienable Rights", or with it's use in the Bill of Rights, which is a list of "guaranties and immunities". In both those respects, a 'Right' is something that the US government cannot take away from you.

Or maybe you are forgetting the many different meanings of the word.

right: ...n. ...2. a power, privilege, etc. belonging to one by law, nature, etc...

Roget's Thesaurus has many synonyms listed, including dextral, straight, true, freedom, property, just, privilege, duty, honor and virtuous. Look a bit further down the index and ...Behold! a listing for "have a right to" -- just what the doctor ordered! Let's check that out, shall we?

Dueness. -- N. Dueness, right, droit [law], due, privilege, perogative, perscription, title, claim, pretension, demand, birthright.
immunity, license, liberty, franchise; vested -interest, -right.
Sanction, authority, warranty [law], charter, licitness, warrant &c. (permission); consititution &c. {law}; etc.

Are you seeing a pattern here?

Or maybe you are just trying to obfuscate the issue with semantical variations on the word, much like has been done with other keyclowns when they claim that Title 47 of the Code of Federal Regulations are 'rules' and not 'laws'. Kinda funny how, even though they are part of the federal 'regulations', that the anti-law faction prefers to call them 'rules' because the word 'rule' has a greater semantical seperation from the word 'law' than does the word 'regulation'. Either way, they all means the same thing: An enforceable edict. In the same vein, 'right' and 'privilege' are generally synonymous, and when someone has a station license to operate on a specific frequency while someone else does not, then the LAW will 'rule' in favor of the person with the 'right' by LICENSE.

Now, are you totally stupid and need a lesson in common sense?

>> >get it right,then I'll get back to you on this.

Like I said four times before, I already got it right. But let's rephrase this from YOUR angle: "I already got it privilege". Doesn't work, does it? Duh!

1838. Doing more with less

Newsgroup: rec.radio.cb
Date: 2002-10-18 07:37:02 UTC
From: yeti@REMOVEcet.com
Message-ID: <3dafb4a6.5132960@news.cet.com>
Source record: 140618

A few weeks ago I think it was Timmy that was defending the engineering prowness of the illegal amp techs, saying something along the lines of "they are doing more with less". Like using 96 RF transistors to accomplish kilowatts of power. This statement really stuck in my head because of it's unique contradiction:

For example, if the purpose of 'more power' is to get better transmission distance, wouldn't it make more sense to make the signal more efficient as well? After all, 75% of AM power is wasted. The FIRST thing to do would be to use SSB, or even CW, instead of AM.

Now since the antenna is the most important part of any radio transmitter, wouldn't it be better to make the best possible antenna before pumping up the power? And if these "engineers" are as good as they claim, why can't they construct a mobile antenna with a very narrow beam, something on the order of 20 dB or more? Seems that would be money well spent...

Also, how much power is really needed to make contact with the other station? Instead of cranking up the power to 10 kW, why not use a different band? Or a repeater? IOW, why spend thousands of dollars on a super-duper mobile broadcast station when all you really need to do is to spend a few bucks for a ham license and some cheap equipment?

And who needs a license, anyway? With just a computer w/soundcard and some free software you can hear Part 15 stations hundreds to thousands of miles away. And building a Part 15 transmitter is significantly less expensive and labor-intensive as a decked-out multi-kilowatt amp.

So who is really doing "more with less"?

Good point. For many of us, the CB is what "sparked" our interest in
amateur radio.

> The term "Breaker Breaker" has never been associated with ham radio.
> It's something that grew out of the CB fad in the late 70's.

Actually, I believe it was the other way around. The term "breaker"
was originally used by ham radio ops and subsequently adopted by
CBers.

Right. If you are not into radio, you are only aware of it in the
periphery sense, and tend to only know of it, what has been glamorized
by mass media outlets. It's unfortunate that those mass media outlets
made CBers out to be rednecks (like Smokey and the bandit), who use
strange lingo (10-4 good buddy!), and use their radios to evade the law.

I used to have to deal with that image everytime someone would look at
my CB equipment and make their "informed" comments. Now that I have more
ham equipment then CB equipment, I'm still dealing with that image. Such
is life.

Since ham radio and CB radio have one thing in common (The radio), it's
easy for the uninformed public to mix the two up.

> Most of those I encounter are full of questions as to why I have a CB in my work
> truck, my Jeep, and at home.

No doubt they wonder why you bother with all the radio stuff, when you
could just as easily reach out and touch someone with a pocket sized
cell phone.

> They can't understand what I find so enjoyable.

Which is why they aren't radio hobbyists.

> No one has ever talked about illegal operation or interferance unless they
> had prior experiance with CB & Amature radio.

Ding ding ding!

That experience with "radio" (be it ham or CB) has, in increasing numbers, been due to interference to home entertainment equipment. While it is true that the sheer number of consumer "widgets" has increased in the last 20 years, and the design of those devices has not taken interference into consideration, there still has to be a source for that interference. That source is usually either a ham or a CB operator. And since illegal and poorly designed amplifiers are in "vogue" on CB, in the majority of cases of interference, the source is likely to be an illegally running CBer.

When the interference source is a ham, usually there can be a workable solution arrived at to minimize the interference. CBers are much more likely to be belligerent toward a complaining neighbor. This is why many towns are looking to the government to allow local law enforcement to investigate and cite illegal operations.

> I tend to believe that the
> majority of the public still view CB in a "Smokey and the Bandit" kind of
> way. As soon as I mention something about CB I often get some trite CB
> jargon thrown at me in a horrible southern accent. Takes a bit to expalin to
> them what CB is and what they'll find if they fire their own station up.

That depends. People who have never had a run in with interference, may, depending on how old they are, think of CB either as "that fad that went out in the 70's", or like you said about "redneck smokey and the bandit".

Once interference comes into play, the public adopts a much more sinister opinion of CBers (and unfortunately hams as well, due to their inability to distinguish between the 2 services).

Once the skip dies out completely, I don't think I will hear many people outside of channel 19. There was a group that was local to me, but they disbanded (likely due to the skip interference). Things may pick up in a year or two. I can always be hopeful.

But I now live about 15 miles away from the nearest major town, and about 50 miles from a "big city". In the city, things are a bit wilder, they usually are.

Your story is not unique. I've heard serveral people relate similar
stories. It's a shame that a few high powered egotists were allowed to
chase some pretty good folks away from what used to be a great "G" rated
hobby.

>
> It's been about 25 years since that happened, so I'm not up to speed on that

There really are no "standards" at least not legal ones. I'm not sure if
even channel 9 is protected by law anymore. Where people go is normally
a regional thing. Channel 19 is still the highway/truckers channel, and
SSB users are normally found from 36 to 40, again depending on area.
Everything else is up to you.

It's a natural stepping stone. I actually was aware of ham radio before
CB, but at that time thought that only someone like Marconi, would
qualify, to have a license.

You're right. The term "break" is used to cut into a QSO. The term
"Break, Break" usually means an urgent interruption, usually an
emergency.

But the term "break" which morphed into breaker, and like the term "73"
(which morphed into 73's), was "adopted" and mis/overused once it hit
the CB circuit. Once Cb became popular, the term became associated with
them.

I'm interested in this soundcard, part 15 thing. What's that all about?

> So who is really doing "more with less"?

The "more with less" is really a joke. They're not doing that. But what
they are doing is engaging in the RF version of "extreme sports". Making
contacts and maintaining reliable communication is not the game they
play. It's the king of the hill, The boss with the big hot sauce (Extra
points if you can tell me the first well known person who used that
expression), the guy with the biggest "gun".

It's really electronic penis envy. That's all it boils down to in basic
human behavior terms.

People who have no concerns about operating illegally are less likely to be willing to solve any interference problems. The mentality that operating illegally is OK is the mentality that is likely to be belligerent toward anyone who complains about their interfering. As you state, the problem of interference from cbers and freebanders running illegal power, using modded rigs to overdrive splatter boxes has become so severe that a law has been passed to allow the local authorities to become involved. All brought to you by the twistieboy and timmy nebonehead types.

Hams never used breaker, I never heard that term until cb came
along. The word is break, one break if you just wanted to enter a
conversation or interrupt to make a point...break, break, break
denotes an urgency such as during a net operation an you have
urgent information for the net. Breaker breaker was never ham
lingo. That came strictly from cb.

>more. Its just the principle of the thing that counts.

i did not suggest Mexico was going to threaten the USA, i merely pointed the USA would not threaten Mexico over something so trivial as 11 meter cb'ers when it does not even threten them over drugs which is a very main stream and important subject. please follow along and quit trying to change the subject.

>
>> your lifes view is kinda distorted as to
>> the whole importance of 27 megs to the real world
>
>Your view is "kinda distorted" as to why you think it is so

Because they had rather be able to 'step all over the other
stations' than have meaningful communications.

Ok, I hate to make an issue out of semantics, but while I would agree
that stateside stations are not truly considered "DX" to guys who are
serious dx chasers, the context of the term "dx" used in this discussion
was used to illustrate signals which arrive at your station through
atmospheric propagation, and not directly through line of sight, or
direct paths.

If you are comparing stations only through their direct signals
(basically locals), then it is much easier to estimate power because the
signal path will not vary, and is somewhat constant.

But once you factor in the atmosphere and its ever changing effects on
"long distance" signals, the validity of your test bed becomes suspect,
due to the many variables in propagation that cannot be accurately
factored out.

Sure. That's why they eventually get caught.

> Again, over an average and based on my experience with certain types of
> antennas I know, I sum the information to make a logical guess. See my
> just posted example of three stations in Northern California.

Back "in the day" on the CB band, I knew the signals of pretty much all the locals in the area. I could even tell the difference in the sound of their key-up (back then just about every rig had a T/R relay and were quite distinctive). Some of the guys used to play games with me and just kerchunk the mike a few times just to see if I could tell who they were. When things are in a steady state like this, you can make semi-accurate comparisons. If someone was giving me a certain signal, from a certain beam heading, and knowing their output power, I could make a fairly accurate estimation of how far away they were. This came in handy when we tracked down the handful of troublemakers over the years. I used to be quite adept at "DFing" people.

If you can tune to the same stations on a day in and day out basis, and their signals never change appreciably, then I would agree with you. Once "conditions" start to affect the signal. You can't be sure of what you are actually seeing.

That's true whether the output power is 100 watts or 10,000 watts.

>
> Loud mis-tuned amplifiers make more poop.

Mistuned amplifiers make more poop. They don't have to necessarily be high powered.

>
> ALC is a waste of time... (another whole thread topic I'm sure).

Yea. There are many who believe that if the rig is sufficiently ALC'ed, there's no need to ALC the amp, if peak drive is below the compression point.

No, his argument was that many hams run excess illegal power. In support of this, he said:

"Big watts is a hot topic on a pretty good size group of the "amps members" group minds'. Enough so to justify a rather large member list server on the specific topic"

So again I ask (and I'll rephrase it to suit you), where are all the hams discussing running big illegal watts?

Dennis,

Despite twisty's feeble attempts at maligning my character, I had
nothing to do with any sort of attempt at giving you problems at work. I
am truly saddened to hear that you've become the latest victim of these
tough economic times.

I may be following suit sometime in the next year, as things are not
projected to get any better for me either. If I can hold out until 2004,
things should get better.

>

Most of us removed the driver stage for the reasons you stated. We just drive them a bit harder. With 6 meter rigs that run up to 100 watts, drive level should not be a problem.

I thought for sure there would be a need to change the input or output transformer windings or such. Are you saying that it has the bandwidth to work unmodified?

Thanks for all the good advice over the years.

Dave wrote:
Hey Dave Hall,
I have to disagree with you on this one:

"An unfortunate truth is that the general public views CBers as a lawless bunch of anarchists, who blatantly disregard the rules of radio law and are the cause of the vast majority of interference to home entertainment equipment. Which is why there are more and more laws being proposed to regulate CB radio at the local level, since the feds have been doing a poor job of it themselves. It is also a good reason why you can't buy a new home in a development without some sort of antenna restriction. I can't say that I would blame any ham that would want to put to rest any notion that ham radio, is connected in any way to that image.
From my experiance Dave, The public does not hold the view you posted above. In my experiance the public, not counting CB'ers and Hams's of course, looks at CB in a light tainted by only what they have seen in the movies.

Even though ham radio does get a lot of press occasionally when helping
out in some disaster or emergency situation, the general public knows
just about as little about ham radio as they do about cb. They often
think ham radio and cb are the same thing.
-
And that's the unfortunate truth.

your asking for opinions on something he never implied. all he said is there are alot of hams using high power. even jj agreed and he says he's been a ham for over 40 years. you may nit pick what "alot of hams" means all day if you'd like to but it doesnt change the fact that there are many hams that own big amps. you decide for yourself if they fall under the same human charecteristics as normal people do or not just because they have aham license. i can think of 3 ameritron amps right now that will produce more than the legal limit and that doesnt include the henry with the 3cx3000 tube or the QRO line of amps or the alphas. now do you think every ham operator is perfect and never tempted to take it over 1,500?

What about that guy that's 60 miles away from you that shuts everyone
else out of the channel when he keys up?

> instead they are used for
>competition use against other high powered stations.

Oh, you mean those splatter contests? Yeah, right. They are not about
communication, they are about bird watts and how much a radio can be
overmodulated and still be distinguished from another overmodulated
sparrow-cooker.

>>And building a Part 15 transmitter is significantly
>>less expensive and labor-intensive as a decked-out multi-kilowatt amp.
>
>sure it is but nearly as fun or rewarding for these guys. if thats what you
>prefer then have at it and knock yourself out.

It can be just as rewarding, if not more so. Especially when you make
your first 500 mile contact on less than 1 watt INPUT (which
translates to only a few MILLIWATTS from the antenna)! I would call
that doing more with MUCH less!

>>So who is really doing "more with less"?
>
>these guys are. have a nice day.

I'll agree that they are doing more lawbreaking with less
intelligence, but that's it.

Hi Dennis,
Thanks for the good news that Lucent finally saw reason and gave your
criminal self the much deserved boot.
We certainly hope that our calls to HR and emails to Lucent webmaster
concerning your promotion of criminality had some bearing on the
issue. All else
being equal, if it was a tossup between you and someone else I am sure
they kept the guy who doesn't promote federal law violations.
This will also give you some time to build more amplifiers. Cheers and
beers, Dennis...hope ya get a nice HV supply to say hello to ya
sometime.
SEEYA!
AntiKeyclowns own this NG!

JJ,

You have to understand something. In Twisty's little Walter Mitty world, he thinks that people who refute his reckless disregard for courtesy and adherence to laws and regulations, are all one and the same person, who have a multitude of accounts. He thinks that you're me, simply because we share much of the same viewpoint with regard to legal operations.

And somehow, he also thinks that posing an opposing view, and calling an idiot, an idiot, for espousing sociopathic ideals, is somehow against TOS rules for various ISP's. I dare say that he more than welcome to try that premise out on my ISP. I doubt they would want to risk a first amendment lawsuit, just to silence my opinion.....

This interpretation comes from your hobby of understanding othes?

>What is 'othes'?<

A typo.....sometimes that occurs when one doesn't have to look at
that keys and type with their index finger.....or better yet, when
one is way beyond what you consider a serious cw act...15 wpm.

> Most hams will work with anyone about< >complaints, most illegal
operators won't.<
>The mentality that operating illegally is<
>OK is the mentality that is<
>likely to be belligerent toward anyone who< >complains about their<
>interfering.<

The same can be said for those who anonymously cry "I'm a real hammie,
NOT a nocode".
The same can be said for those that just can't seem to abide by their
TOS set forth in their legally binding contract they agreed to.

>Who are you referring to now?<

You in the first sentence.

>Talk about anonymously crying, <

Yes,,,,you felt it important enough to claim you are not a nocode. You
felt it imporatnt enough that you not be viewed as a noccode.
Anonymous crying.

>who are you twistieboy?<

Why do you care who I am?

>Care to post a real name?<

Ask Lelnad,,,,he claims to have it...my addy, too. Actually, they are
both in the archives if you're that enthralled with my personal business
(which you have a penchant for).

>When did I ever say someone who holds a<
> nocode license was not a real ham?<

Well, socialist Dave Halll (N3CVJ) is sharing his interpretation skills, and you have insisted many times you are not a nocode. It's important to you, you see.

>You seem to be the one hung up on that<

Only because the group that "Arron" named is half nocodes. My "hang-ups" wouldn't interest you.....wait..they probably would.....ok...here's one.....I have a serious problem with the playoff system in college football.

>Since you can't achieve even a nocode< >license<

Seer malady.

> you only recourse is to make fun and belittle< >anyone who can.<

Not anyone,, only those that bring their trash to my doorstep. It's not my fault that Lelnad and Dogie and Dave Hall and Frank Gilliland have serious internal problems with society as a whole.

>Too bad, real pathetic.<

Not at all. They all provide a perfect example of lids in hammie radio.

>As you state, the problem of interference< >from cbers and freebanders< >running illegal power, using modded rigs to< >overdrive splatter boxes< >has become so severe that a law has been< >passed to allow the local< >authorities to become involved. All brought to< >you by the twistieboy and timmy< >nebonehead types.<

I guarantee my base set-up is cleaner than you could ever hope to achieve.
That Seer malady is catching.....

>Really? You can guarantee it without< >knowing anything about my station.<

Certainly. Just as you can claim I can not achieve a nocode license. See how easy that was? Did that assist you in that dilemma you're having? HAhhahahahahha!

> Really amazing.<

Not at all....all mere opinion...conjecture....guessing...and it pizzes you off.

> I operate legally, can you say that?<

Absolutely. I can honestly say each and every time I turn on a certain rig I operate legally....most of the time. DX on cb is an obvious exception, as is freebanding between 10 and 11....but yes, I operate legally at least once each and every time I power up.

> expensive throwing them out like that

My FT-847 is secure. :)

I've seen some amazing BS on the ham bands too, though VERY rare.
Back in LA, we had the W6FXN repeater. This machine hosts the seismic
precursor net.
A bunch of hobbyists, who at the time, were the main source of immediate
information on quake location data. We also handled a lot of freeway
accidents etc as you might imagine.

There was this one ham, XE2TCQ (mexico) who decided that our repeater output
freq, was "his" channel. The story I heard was that their government had
auth'd him to put up a repeater on this freq. Anyway, this guy would
routinely interfere with us, even during emergencies. At one point, I heard
him talking about the emergency we were working, so there's no doubt he knew
what he was doing. This went on for years. At one point, he almost took me
out, as I was calling in a pileup on an onramp. I had gotten most of the
info through to another op with a base and a phone, but had not yet told
them that it was on a blind curve.. Then TCQ comes in again, and almost
prevented me from getting that through. I had visions of CHP and ambulances
piling right into the accident, because by the time they could see it, it
would be too late. Fortunately, this being ham radio, and 2M FM, I had my
160W mirage brick inline, and I just went up to full power to complete the
call. "Burn-through" is what the military calls it. It took a lot of power
and antenna gain for him to mess with us, but all it took for us to get
through was just a bit more.
The inverse square law is your friend. :)

We were never able to get any enforcement action on it, because of the
cross-border problem.
We had hours of tape, we had him identifying, talking about the traffic he
was jamming, and talking about how he was jamming us deliberately.
From his point of view, we were interfering with him, since he was
authorized, and our signals were showing up on "his" frequency.
However, deliberate interference is always wrong, and deliberately
interfering with an emergency is just beyond imagination, as far as I'm
concerned. No help from TASMA, no help from the FCC, no hope of help from
the Mexican government... :-P

To top it off, I heard this guy worked as an air traffic controller down
there.

I don't fly into mexico much. :)

Taken from the online edition of the Jupiter Courier at
http://www.JupiterCourier.com

RANDALL MURRAY staff writer
David Baker, an employee of Advanced Communications Services of Deerfield Beach, works to tie together complex systems in Emergency Operations Center of Tequesta's new Public Safety Building on Tequesta Drive.

A building made for the future
Tequesta Public Safety Building nears opening
By Randall Muray staff writer
October 7, 2002
Gold-colored shovels broke into the soil to the sounds of cheers and applause less than a year ago, launching construction of Tequesta's ambitious new Public Safety Building.
Today Village officials and members of the police and fire-rescue departments are gearing up to take occupancy of the $3.9 million, 20,292-square-foot facility that will be dedicated Oct. 19 -- 10 days short of a year after groundbreaking.
The new building, designed and built with direct guidance from Fire-Rescue Chief James Weinand and Police Chief Stephen Allison, will free police officers from makeshift quarters in a shopping center, and fire-rescue personnel from the cramped building adjacent to the new structure. The old station will be torn down later this year.
Last week, Weinand and Allison offered a guided tour of the new facility.
At the heart of the building is a hurricane-hardened Emergency Operations Center that is built to withstand a Category 5 hurricane with winds up to 155 mph. The rest of the building is built to withstand a Category 3 storm.
The EOC is a 4,000-square-foot, self-contained unit that can operate without outside electrical power for two weeks, thanks to a huge generator and a 4,000-gallon diesel fuel tank. The roof above the EOC is made of five inches of poured concrete with heavy steel reinforcement. Thick metal doors lock tightly to protect those inside from what's going on outside.
Inside the hardened shell dispatchers and others will be able to handle just about any disaster with high-tech communications and monitoring equipment. The center also has its own electrical, mechanical and air-conditioning systems, as well as bathroom and kitchen facilities for storm-bound employees.
Under the removable floor, covered by "peel and stick" carpeting, are hidden electrical outlets and dataports to be used in emergency. In normal times, however, "you'd never know they were there," said Weinand.

Four plasma monitors and a touch-sensitive wall screen to record happenings in Tequesta during a major emergency will help officials keep in touch with what's happening outside -- and with neighboring emergency services.

There is serious duplication in communications systems, Allison pointed out. A priority phone line will allow up to 28 calls to come in at one time. If that should fail, cell phone and satellite phone systems are available.

"And if all else fails," said Weinand, "We have a Ham radio room." Tequesta has an active group of Ham (amateur radio) operators. If needed, a 45-foot telescoping antenna can be raised on the roof.

Pointing to the focus on electronics, Weinand said, "There's 15 miles of low-voltage wiring in this building."

At present, the Tequesta Police Department is housed in a Countyline Plaza storefront. Security is a major concern for Allison. In the new building, suspects will be driven into the structure through a sallyport, with an automated garage door. Locks to provide access to the interior of the police department will not release until the sallyport door is completely closed.

Another security measure is afforded possible juvenile suspects who can be moved into a holding cell area without being exposed to adult prisoners.

Included in the police portion of the building, which is at the rear of the structure, are offices for administrators, weapons storage, a secure evidence locker area, "fuming booth" that helps discern fingerprints, an open file system that maximizes space, conference room and more.

Security, whether from a natural disaster or intrusion by unwanted people, is at the top of the list of priorities for the new building. And security starts at the front door. A receptionist inside a booth can govern entry into the building. Those who enter talk with the receptionist via a two-way comm system, and the reception area is monitored by security cameras. Any materials that need to be exchanged go through a secure pass-through.

Fire-rescue personnel are on duty 24 hours a day. For night shifts, eight individual bunkrooms are provided -- including two designed for tall people.

The apparatus room -- where the fire-rescue vehicles are parked -- offers more than enough space for today's equipment as well as projected room for additional, larger vehicles in the future. At present Tequesta has two rescue vehicles, a ladder truck, a pumper truck -- with another pumper to be added early next year, and a utility truck.

And when the alarm sounds and firefighters jump into those vehicles to respond to a call, they'll roll safely down the inclined ramp onto Tequesta Drive. Weinand changed the design from a concrete surface to heavy-duty brick pavers.

"That's a pretty good slope," Weinand said, "And we were worried that when the concrete got wet, our vehicles might slide onto Tequesta Drive." Hence the rough-surface pavers -- which also are less costly than the concrete drive.

In working with architect Gee & Jensen of West Palm Beach and general

contractor David Brooks Enterprises of Palm Beach Gardens, Weinand said he was looking not simply at today's needs, but what the Village would require many years down the road.
Allison responded to some criticism in the village that the building is too massive for a community the size of Tequesta. "You have to consider that 20 percent of it is shared by both departments, and also it's an administrative center. We've tried very hard to maximize efficiency. There is no wasted space here."
Said Weinand, "Everybody in Tequesta will be proud of this building for a very long time."

I went to that web site and ordered some, it was increadible. I cannot believe that they can sell this stuff like that. It completely knocked me out into some other netherland place where the colors and shapes were something like I have never seen in my life. I forgot who I was or that I had even lived the life I now have. I became someone else for a few moments. I actually went to some other place for 20 minutes.

"What many hams own" is not the issue, Tim, it's "what many hams do"
(although they may be interrelated). Skipp said that it was a fact
that many hams operate illegal high power. He inferrred that these
hams could be found on a certain list server. So now I want to confirm
his facts. What is your beef?

> you decide for yourself if they fall under the same human charecteristics

I honestly don't know. And I don't know why you object to the question
being asked in a ham forum. What's wrong with asking the questions?
Are you afraid of the possible answers? Ya never know, hundreds of
hams might respond to my question by saying they operate illegally and
the FCC is a joke. That could really give a boost to your side. Worth
a try, doncha think?

Look for 10 meter amps on the left. I am running the Texas Star 350 with a Galaxy 99 on the AM side. I get really good output with this amp. In fact my swr is 1.2 on the high side of the amp. And on the low side it runs right at 1.0
Look at it this way speeding is illegal too, but we all do it!

Not a bad site. I tend to agree with what I read. His "open spectrum"
policy is based upon the emerging technologies in systems architecture
in the face of an anticipated boom in wireless network communications.

His focus is on networked radio communications systems, which require
much more bandwidth than can be provided the whole of the HF spectrum.
If you read further, he also addresses the physical limitations of
spectrum useage (i.e, antennas) making HF somewhat undesireable for
modern network communications. Now this is hardly relevant to CB,
amateur, and even broadcast radio and television services, where each
station is operated independantly and spectrum allocations are well
established. His 'open spectrum' concept is intended to supplant the
current "spectrum-for-auction" method of allocation used for the
wireless network services.

So the only thing that has been debunked here is you, Twist. Next time
you want to quote a site, try reading it first.

"Physics" used to dictate that the world was flat, and that if you
travelled faster than 100 mph you would never slow down. Nevertheless,
if these 'engineers' are so good at doing "more with less", let's see
them make a 'more' efficient antenna in 'less' space!

: Aaron H. Voobner <aaronharoldvoobner@yahoo.com> wrote:
a guy using a fake name...

[The original posted question is just below]

: Subject: Do HAMS use more than 1500 watts ?
:>This may be a silly question,but...if HAMS are
:>legally allowed to use 1500 watts (,just as c.b.ers
:>are allowed to use 5 watts a.m.) how can you tell if a
:>HAM is using more than allowed ?
:>Does this ever happen ?

: A few replies came from licensed hams who posted their
: callsigns and assured the poster that yes, it does

Callsigns are not required for the truth... nor are they required to
answer a question. One is rather foolish to post personal information on
the web.

: indeed happen, but illegal high power operation is by
: no means representative of the mainstream of amateur
: radio. In other words, compared to the vast majority
: of hams, high-power illegal operators are considered
: an unwanted minority.

Words like "most" and "many" were thrown out by various people. Boobner
wants a specific number attached to "many," I felt safe asigning 100 to
200 or more people to "many." You ok with calling 100 plus people
"many?"

Much of the "mainstream" poop is boobner generated material. The orignal
text as shown above mentions nothing about comarisons to the mainstream.
If you search back through the threads, you'll see mr fake name boobner
start to throw it out as a way to generate off topic diversions. Classic
issue dodge techniques when you have little background in the area...
The news group would be better served if mr boobner could state facts as
he knows them and provide supporting technical/factual material. At this
time, nothing of substance has been revealed from boobners posts. Just a
lot of cannon fodder...

: There was however one poster who disagreed. He
: identifies himself as ham named "skipp" (no callsign,
: no last name). Please take a moment to read through
: some excerpts of this person's advice to CB'ers.

All of a sudden I'm "one poster..?" Well, I've been around for some time,
many of you contact me off the news group, some are friends of various

degree and before spam set in so heavy (recent times), I would even post my reply Email address. To thwart spam, I often post a web url which has direct email icons to me. Even mr boobner has emailed me direct once or twice in the past. My advise was not limited to CB'ers... it works pretty well for all people. I put no restrictions on the facts.

... and
A posted Email address, callsign or a last name do nothing for the topic. They do provide a reliable daily source of unwanted Spam and Emails with virus' attached. Since I've stopped posting the direct Email reply address with my comments, the spam has reduced 10 dB. Well worth the trouble and people still reach me through the mentioned web server Email icons.

Moving along...
Please notice how boobner places portions of previous text, taken out of context to try and place a poorly done off topic smoke screen. Onward...

: Skipp says...
: There are many Hams and CB'ers that run power in
: excess of the legal limit.

Anyone not agree with the above...?

: Hams in excess of the number 200 that I have first
: hand knowlege of. Many are good friends of mine spread
: through out the world. CB'ers..? Oh, I'd be willing
: to say more than... 200 just for your answer. Hope

Notice how he's pasted the above into a few lines that are well out of context. But for the sake of his sinking ship... lets review.

I know many CB'ers and Hams, a number in excess of 200 that enjoy the subject of rf amplifiers & high powered rf amplifiers. Many are home brew builders, some buy them, some convert them from and to various applications. Some operate them legal, some do not...

Some use them in legal non amateur applications, ie broadcast and research applications. There are legal applications for very high power rf amplifiers.

Talking about the science of high power rf amplifier building and operation is very interesting to me and the hundreds of other people who frequent news groups and a popular list server. Most of the people in these groups would not waste nearly as much time on a boobner rebuttal as I have done... but his poop needs to be clearly pointed out for the person who honestly asked the original questions and the readers of the follow up reply posts.

: that's enough to make you happy. Various methods and
: experience were used to base my statements. A
: calibrated S-meter is one easily reproduced method to
: make a comparison. My transceiver has one as most

: do...

I state that it is possible to make relative measurements of a stations
power level using some logic, reference comparisons and experience...
nothing more.

People flew in from around the group to take me to task over the
statement. I explained in an actual example of how I might do
said. For some reason, many (that's more than 2 for you boobner) tried to
take me to task over S-Meter calibration, which is not that big of a deal,
nor is it that hard to do. Lets continue that on a seperate thread if you
burn to debate or go over it again.

My radio still has one S-Meter, as most still do. That number has not
changed that I know about. Your results may vary...

: Power levels well in excess of 2000 watts were clearly
: demonstrated to many of us in a well known web group.
: I've mentioned it before right on rec.radio.cb

I'm not sure what the above does for boobners point, but 2000 watts is
conservative compared to amplifier examples I've seen and heard on the
bands. Flip on an HF radio and listen for yourself.

: These people chime in from all over the world...

It's a rather large one... "world" that is.

: skipp
: http://sonic.ucdavis.edu

Notice the web url... if you visit the server, please note the Email
icons near the bottom of many (that's more than 2, boobner) pages. Hey,
you really can reach me direct. What a concept...

: Later in the same thread...
: Skipp says....
: -----

: Most hams are not capable of running twice the legal
: power... a small percentage have large amplifiers
: which have 8 to 13 dB of gain. Many... ie as in a
: significant number build and operate amplifiers of >13
: dB of gain. I guess the hundreds members of the list
: server group I frequent are "just a few." Web sites
: abound with pictures of these well built amplifiers.
: You guys haven't been it the real world for some
: time... get off the decafe..

So what is wrong with the above...? Most off the shelf legal amplifiers
probably don't do twice the auth limit... but some do push the envelope. I
would feel safe to say that most hams dont even have large
legal amplifiers.

One list server group specializing in High Power RF Amplifiers that I frequent easily has more than a few hundred members. Boobner seems hell bent to have me post the web url when I mention that it is easily found via a google web search. So when he does find it... what will he do..? report the members to the fcc for talking about amplifiers...? Seems he has a hard enough job keeping the lapdogs in check on rec.radio.cb

: Then in...

(I cut the locations out, too long. If you burn to see the original text, review boobners first post in this thread for the location)

: Skipp says...

: My guess of greater than 100 amplifiers is more than
: modestly low, made
: for him only. Anyone actually operating real radios
: knows that number is
: unrealistic on the low side.

And...? whats your point boobner..? You were going on about a number, I threw out a low guess number of 100 plus amplifiers just to get you to move on to something more substantial. You want to go off topic so much in your diatribes, I have to do something to get you out of your rut.

How about I fatten that number up to 200..? feel better..? Now get on with your stories. Anyone on the hf bands knows there are an easy 100 or two hundred stations who can run serious gas amplifiers. Many are Hams... many are CB'ers lest we stray from the original ham question. I feel safe to write there are more than 200 hams with serious gas amplifiers operating in the HF bands.

: If your interested in the truth, pick up a magazine or
: search the web...
: I'll sleep well if you don't belive me...

I honestly sleep well regardless... but what one reads in CQ, QST and similar mags is a very small number of hams cited for high power operation. I do enjoy reading about the occassional Texan Ham bust story where the guy has a pair of 3cx10000a7 tubes loafing along. Trouble is, he was stupid to use it for jamming.

: The point of this entire thread on the original topic
: was to let the
: posting person know that hams can and do operate
: amplifiers over the
: legal limit. They are a relative number, but probably
: more than one
: would think exist.
: Some get caught, most don't.
: cheers
: skipp

I still stand by the above statement... now lets cut through more boobner poop.

: -----

: My question is, are "skipp's" claims accurate? Do they
: represent the majority views of amateur radio
: operators? Do they represent the majority views of
: licensed amateurs frequenting this list?
: You may email me or post your comments to the list.
: Either way I thank you for your cooperation.
: Sincerely,
: A.H. Voobner
: aaronharoldvoobner@yahoo.com

Anyone with a bit of common sense could easily do the homework for themselves. I hope each person makes up their own mind rather than listen to your head in the sand diatribe.

I would say that the opinions of the Amateur Majority about high power amplifiers would not be made based on first hand experience. The majority of licensed Amateurs in general are pretty clueless about really high powered amplifiers, their actual constuction and operation.

Most hams dont even own large legal amplifiers. It would be silly to qualify opinions from people who have little actual current hands on experience on the subject... ie the majority of hams on and off the news groups or list servers.

There are many who have first hand high power amplifier experience, both legal and the converse. There full names, callsigns and contact are not required to support the truth. Most all would probably tell boobner to take a hike...

You want soft pedaled poopy answers, get them from boobner. You want to use what I provide to do your own homework... enjoy. I also answer technical questions as time allows. Make up your own mind based on what you believe is good information.

If you don't believe what you read, ask more questions to nail down the facts. Fact is... Voobner is not boobners real last name. He's a fake hiding behind a yahoo Email address.

No, that was religious dicta, and "common sense".
The greeks worked it out, and had a pretty good estimate of the diameter long ago.

> and that if you travelled faster than 100 mph you would never slow down.

Never heard that one.

> Nevertheless,
> if these 'engineers' are so good at doing "more with less", let's see
> them make a 'more' efficient antenna in 'less' space!

Engineering is the art of compromise.
To get gain, you have to compromise directivity, or size.

Typically, on a mobile antenna, you don't want directivity in the horizontal plane.
You can compress the vertical radiation angle, but that makes for a taller antenna.
Everything here is in terms of wavelengths, so at 27 MHz, everything is neccessarily large.
If we were to print the antenna on a substrate with high dielectric constant, we could reduce the physical size, but guess what.. As the physical size goes down, so does the capture area, and gain shrinks again.

The best thing I think you can really get to, is a pair of antennas, properly co-phased (and mounted 1/4 wave apart instead of the 2-3' that I routinely see on the road) If these antennas are built for minimal vertical radiation angle, and supressed vertical lobe, then you're throwing most of your power up and down the road, where it will likely do you some good.

The doubled capture area is worth almost 3dB by itself!

Maybe you could mount a pair of directors (we're approaching a mobile cubical quad here..) but now we're talking about four antennas, mounted about 9' apart in a square. This would suppress power in the rear, and add that to the front, for roughly another 3dB.

Given that an excellent receive preamp is about the size of a pack of cigarettes, and can be mounted anywhere, it seems a lot more practical than the rolling flyrod store approach. :)

You might look into fractal antennas, they do offer another way to compromise.

1947. Interference with home equipment

Newsgroup: rec.radio.cb
Date: 2002-10-19 02:33:00 UTC
From: Dan <nezor@hotmail.com>
Message-ID: <wv3s9.2069$071.167077@newsread1.prod.itd.earthlink.net>
Source record: 140724

Please forgive my lack of knowledge on this subject, I'm looking for advice on what to do about some RF interference my televison set is picking up. I'm fairly certain it's a CB user; he identifies himself with a handle (Albert Einstein), and usually asks for a radio check ("Check, check") when he begins to transmit. It's about the same time every night.

I've searched the archives of this newsgroup for complaints similar to mine, and found the following information:

RF interference can be caused by someone illegally boosting their signal beyond FCC-mandated limits.

RF interference can also come from poorly shielded home electronics equipment picking up unwanted signals.

With those facts in mind, I believe it's him running a linear amplifier, a "power mike", or he's messed with the limiters for his signal control. The reasons I think so are as follows:

1. I can only hear his half of the conversation (amazingly loud and clear, mind you), but it sounds as though he's conversing with people across the entire country - he's based in St. Louis, Missouri, probably very close to me, and he regularly addresses people in California, Tennessee, and other locales well outside the normal operating range of CB equipment. For example, -click- "I hear ya, Eastern Tennesee, this is Albert Einstein, St. Louis, Missouri" -click-

2. I live within two miles of a major highway where truckers make up about 30% of all traffic. There's another, smaller highway even closer, less than a mile away, that also sees its fair share of big rigs. If my television is poorly shielded enough to pick up legal CB transmissions, surely I'd be picking up a lot more chatter than just one person. I only hear Albert, and he is quite loud and very clear.

3. The impression I get from his general banter is that he's not very considerate of others; for example, tonight it sounded like he was "keying over" someone else, and berating them for not speaking English.

4. I'm not the only one having problems. I spoke to one of my neighbors, who indicated that she regularly hears this person while talking on the phone.

So, is it reasonable to assume that the problem is not with my television, but with the CB user's setup?

Also: I tried calling the FCC to ask them about it - that was a laugh. My local law enforcement was no better, but they quite rightly pointed out that it was something they'd have to refer to the FCC, even if they knew who was

doing it. They suggested I try to find out who it is.

I've got some time after class tomorrow, I believe I'll drive around the blocks surrounding mine looking for huge or strange-looking anntenas. Could it be someone using an antenna indoors? If so, I doubt I'll find him that way.

Subject: FS: Serious HF Amplifier, for Serious Buyer Only, please.
Newsgroups: rec.radio.swap
Date: 1996/08/20

Hello there,
Please respond to me by email first if your seriously interested. This
amplifier is in California (A real California Kilowatt). No trades and
no
flakes please. I can arrange delivery to most anywhere if your willing
to
pay the costs.

The Amplifier for sale is an 8169/4CX3000A linear amplifier.

It makes about 8k and it drives with 150W. It goes 1.8 to 30
mhz, has full breakin, and is self contained.

It requires a 50a minimum 240v dryer outlet. The ps does about 8100v
max on standby on the high tap.

I also have a new Bird 10kW watercooled termination that hooks up
to a lawn sprinkler set for >6gpm.

Thank You

Skip May WV6F

Co-phased antennas on a mobile don't do much good at all. The problem
is that co-phasing doesn't work with 1/4 wave verticals nearly as well
as with 1/2 wave dipoles. But they look cool.

>Maybe you could mount a pair of directors (we're approaching a mobile

Dave,
You might give that "3db" gain figure from 'dual' antennas another look, that's a bit much even for 'CB' antenna gain figures.
And as far as 'fractal' antennas go, stop by your local Radio Shack and pick up a 50 ohm, 5 watt resistor. They're a more efficient
radiator than the 'fractal' antenna nonsense. You were doing so good
there at first, then you fell off into the land of the "Maxcoms".
'Doc

PS - By the way, 'Maxcom' was an antenna scam in the late '70s.

I'll gratis you an answer... because your post questions are stupid and should be
corrected.

Services are not allowed to manufacture and/or market amplifiers, your question
is really stupid.

If you were to spend a few minutes at the fcc web page like I suggested,
search licensed allocations in the IB or IG service that would fit within
the frequency range you list below. Last time I opened a radio industry
magazine, Cresend Technologies sold type accepted amplifiers. Henry, TPL,
Motorola and a few others also come to mind.

The second question you asked..? It actually tells us how bad you want to
show your ignorance.

No television I've heard of uses the 6146 tube as a sweep tube. There were
some older televisions that used the 6146 tube as a horizontal oscillator
and or horizontal oscillator amplifier. Sweep tube is a label used to
describe a classic type of tube. Horizontal oscillator / amplifier was
often the function of sweep and beam power tubes.

Now go whine about how dumb you look to everyone on the news group.

Yes, many companies do sell certificated amps, but not for the
spectrum prohibited by 47 USC 2.815. If I'm wrong then maybe you can
find a link or something, or maybe scan one of those magazine ads.

BTW, what's the IB service?

<snip>
: Several tube manuals
: simply list the filament specs, then tell you to use 6KD6 Specs, because
: they are built with the same internal components. As fare as being
: non-linear, EVERY amp has some non-linear properties. After all, they
: are used in the real world, not just on paper. By the way, some early
: color TV's used 6146's for sweep tubes.

Similar but not exact... the 8950 along with the similar type Maco
output
tube should be treated as different. Not only was the 6146 used in
TV's,
one can find it in the very popular early Ampeg SVT Bass Guitar
Amplifier.
Loud as heck and heavy like a boat anchor... but man it has some tone.

==========

> Sweep tube is a label used to
>describe a classic type of tube. Horizontal oscillator / amplifier was
>often the function of sweep and beam power tubes.

Where do you think the word "sweep" comes from? Maybe from television
"sweep" circuits? You know, where the trace "sweeps" across the
screen? What kind of tube do you think was used in those circuits?
Maybe "sweep" tubes? Sweep tubes are power tubes that are specifically
designed for sweep amplifiers in televisions. Duh...

Sweep tubes are not designed for use as RF amplifiers, nor are they
designed for linearity at RF frequencies, despite your claims to the
contrary. The Swans, which you so proudly claim to be a sweep tube
success story, use them with significant neutralization, tuned grids &
output pi filters. In fact, I believe that a couple of their sweep
tube 'linears' used the sweep tubes configured as triodes in order to
achieve linearity.

Sweep tubes were used in RF amps not because of their suitability, but
because they were cheap. That's all.

>Now go whine about how dumb you look to everyone on the news group.

And leave you unhindered to spread your RF mythology? I don't think
so, Skippy.

In today's market of tv's it's rare you get such interference, even with
overpower.
Don't be blamin' the truckers. They don't sit still long enough to do your
tv any harm unless you live next to a truckstop.
Chances are, YOU have a nice big fat expensive tv and piss poor wiring
leading to the antenna.
Is the wire brown and flat or black and round like for cable tv?
If it's brown and flat, you have what is called twin lead and rarely used
today.

Step #1: Check the connections to the tv and to the antenna. If they are
frayed, or the screws are loose, fix it.
Step #2: Replace that old twin lead with the newer 75ohm cable. Your newer
tv's have this factor already built in.
Step #3: Replace that old worn out tv antenna on the roof.

One time a neighbor of mine, 20 feet away from my cb antenna, complained I
was interfering with his tv.
Put on a nice big filter. still interfered. While inside his house watching
with him, I could easily see the problem was not coming from me, so could
he.
While on my roof, I looked over at his old antenna and noticed his twin lead
had come off.
Problem solved.

Step #4: Take a little drive around your neighborhood within a couple of
miles.
Check the roofs for cb antennas. Note the addresses.

Now go buy yourself a small hand held cb radio known as a walkie talkie.

Step #5: With portable in hand, find the channel he's operating on while watching tv. Trust me, your portable will hear him.

Step #6: In your car, begin locating which house is the source.
As you get closer the signal will become stronger. Lower the antenna of the portable.
If you can still hear him plainly, hey, go knock on his door.
If it's not the person, ask if the person would help hunting the guy down.
He may even know who it is.
Or at least be able to talk to the guy better.

Step #7: failing all of the above, you will then need to purchase 10 gauge copper sheets and 10 gauge aluminium sheets.
These you will install first over your tv with the aluminium sheets closest to the tv.
The shiny side of the copper sheets should face you.

Now sit back, relax, and enjoy that saturday night football game.

Oh. One more thing. If you should happen to find the jerk, at approximately 0400 hours on a sunday, load a 10 gauge shotgun with 00 buck. Then go around the neighborhood, with headlights off, and shoot his cb antenna. Generally speaking, if you aim for the base, you'll do a much better job.

When the cops arrest you, state loudly and clearly, "Albert Einstein told me to do it!"

Just in case you don't know this (and it just occured to me that you
don't), the 'horizontal oscillator amplifier' to which you refer is
commonly known as the 'horizontal sweep amplifier', a position most
often filled by ... yep, you guessed it ... the SWEEP TUBE!

So now, what television used the 6146 for the "horizontal oscillator
amplifier"?

At 18'+ it's a bit difficult to drive around. @!#!@ bridges!

> I was thinking more along the lines of a roof-mounted MASER, but at HF
> frequencies. Or maybe a loaded helical...

A maser is an amp, not an antenna. You still have to get it to radiate.
As you point out below, once you hit the noise floor, the maser is way
overkill.

> When your radio already receives the noise floor, a preamp only makes
> it louder. You can do that with the volume knob.

True, but how many CBs are already there?

Generally, any time you double the number of elements, you get about 3dB gain, if done right.
The first couple doublings are easy, after that it starts getting interesting, like my friend in Gaston who does VHF UHF contests with stacked long yagis on everything from 6M to 24G.

> And as far as 'fractal' antennas go, stop by your local Radio
> Shack and pick up a 50 ohm, 5 watt resistor. They're a more

> good there at first, then you fell off into the land of the "Maxcoms".

Well, I think there's something there, maybe not as much as Chip claims there is..

The DL makes a good point about antennas though.
Low SWR just means it's an efficient match. It says nothing about radiation efficiency.
I had an MFJ antenna that sprang with an interesting fault one stormy afternoon.
I wasn't able to hit the local repeater with 25W, from a spot where my handheld will make it with 20mW.. We put a bird on the antenna, and got 1-1 SWR. Using some arcane adaptors, we were able to put the bird right at the base of the antenna... 25W forward, nothing measurable reflected, but apparently nothing radiated either.

Tossed the MFJ, bought a diamond. SG7900
It's got oodles of gain, but it's a bit interesting to mount.
http://www.inchase.org/outflow/events/installnic2002/f5Mount.html

>
> PS - By the way, 'Maxcom' was an antenna scam in the late '70s.

I sort of vaguely remember them.

My favorite was the "zing ring", a <1' diameter wire ring that was supposed to improve your ground plane, when clamped around the loading coil of a base loaded mobile antenna,

No shit, sherlock. My point was that maybe there is some other method
of radiating a signal other than a conventional hertzian antenna.

>> >Engineering is the art of compromise.
>> >To get gain, you have to compromise directivity, or size.

More of that pesky conventional wisdom. Your physics textbook doesn't
cover everything that's possible, as my detractors are so blissfully
aware. Think: If you are trying to contrive an antenna that's smaller
than a hertzian antenna, are you going to use the hertzian principle?
...uh, probably not!

>> I was thinking more along the lines of a roof-mounted MASER, but at HF
>> frequencies. Or maybe a loaded helical...
>
>A maser is an amp, not an antenna. You still have to get it to radiate.

A maser doesn't radiate? Since when?

Of course, all this talk about a maser is purely hypothetical, since I
don't think that anyone has ever built one for 27MHz. But it's still a
neat idea.

>As you point out below, once you hit the noise floor, the maser is way

Right, this guy has to be operating from a base station. It's possible he's sitting out in the parking lot in a passenger vechicle, I guess, but more likely this is coming from a house.

> Chances are, YOU have a nice big fat expensive tv and piss poor wiring
> leading to the antenna.
> Is the wire brown and flat or black and round like for cable tv?

No, I've got digital cable with 75 ohm coax. No old twin lead wiring or antenna. I've checked all the connections to make sure they're tight.

There *is* a so-called antenna (coughantenna?cough) that came with my receiver, it's really just a long piece of soft wire. It's a cheap, crappy looking little thing, but seems to do a decent job of picking up FM radio. You've got me wondering, though, if it's also picking up Albert. The next time he pipes up, I'll pull that little antenna off and see whether that makes any difference.

> Step #4: Take a little drive around your neighborhood within a couple of
> miles.
> Check the roofs for cb antennas. Note the addresses.

talkie.

I was looking at a few handhelds - Cobra, Midland, etc. Any recommendation? Sounds like you're talking about a cheaper item than I was looking at, these were 40 channel CB's with weather bands, $90 range and probably more than I'd need.

> Step #5: With portable in hand, find the channel he's operating on while

Would a unit with a signal-strength meter help in narrowing down the location? I'm not sure if it would or not. This signal is *strong* - when he

transmits and it comes through the television speaker, it's like he's crouched down behind my entertainment center with a bullhorn. :-) Being that strong (if that even means anything), would he bleed through onto other CB channels besides the one he's transmitting on?

> If it's not the person, ask if the person would help hunting the guy down.
> He may even know who it is.
> Or at least be able to talk to the guy better.

I'd just like to get Albert's attention, and approach him in a friendly fashion, at least to start with. It's possible he is unaware of the interference issue, or if he is aware of it, he might know an easy fix.

I thought maybe some bolt cutters applied to the wiring. Not as satisfying, but not as noisy, either.
I'm envisioning some idiot actually trying the shotgun idea, but missing the part about hitting the base and spraying uselessly at the upper part of the antenna...

> When the cops arrest you, state loudly and clearly, "Albert Einstein told
me

Given the current cost of heating oil or natural gas, I imagine it's
cheaper to keep his house warm with it. Fact is, I could have a house
full of 100kW transmitters and amps if I really wanted to and could
afford it. It'll only be illegal to actually USE one, not possess it.

What "derogatory names", Aanal Aaron? Only facts. BTW, you're a great
one to talk about credibility, since you have none.

Dan,

It's sad that someone would think that your post is a troll.
Unfortunately a situation like yours happens all too often. Many
CB'ers running illegal amplifiers are not aware of the potential for
harmful interference and don't understand its causes. Furthermore,
illegal amplifiers and illegally modified radios used by the illegal
CB crowd are spectrally dirty and more prone to cause interference
than legal CB setups.

I think you're first instinct is correct; seek out the guy and try to
approach him on a neutral, non-antagonistic basis, and try to work
together to solve the problem. But as I mentioned before, since the
operators of this illegal gear generally don't understand how it works
and how the interference is being generated, they often tend to not be
cooperative.

Let's face it, someone who's hobby is keying over other people on a
radio is not too bright. As far as they are concerned, they paid some
"tech" to work on their radio and/or sell them an amp that makes them
"loud" and they are going to get their darn money's worth out of it.
If you find that "Albert" is this type, don't despair. You'll have to
spend your own money to solve the problem with your TV and/or phone.
RF filters are available for both applications.

Of course, if "Albert" is affecting a number of people in the
community with his shenanigans and flat out refuses to take
responsibility for his actions, you might want to go to your mayor or
city council, tell them your story, and make them aware of a House
Bill called HR2346. It enables towns and cities to enact legislation

that will let local cops enforce certain FCC rules.

It was drafted to give teeth to people victimized by "Alberts" who were making their lives miserable with RF interference and laughing in their faces, mocking the FCC and local police's impotence to stop them.

PS: Tim. Shame on you.

Hi Jamey, My name is Woody Parr and I'm up the road in Cornelia. I'm afraid that I'm indirectly responsible for this troll who is badmouthing you at alt.religion.urantiabook. You see he was only there in the first place to attack me.

This idiot is Steven J. Rogovich, 1612 Lake Christopher dr. Virginia Beach, Va. 23464 He followed me to the UB usenet page from alt.radio.pirate He and I (were) both formerly loosely associated with each other in the shortwave pirate radio listening hobby. I USED to be a shortwave pirate but my station has been permanently retired for more than 2 years now. Stevie is still a pirate and is the operator of the station Radio Free Speech. He is also the moderator of a message board at the Free Radio Network < www.frn.net > and goes by the handle of Pat Murphy there. I had a falling out with the people at the FRN a couple of years ago as they became corrupt and were doing so inappropriate things. I dared to open my mouth and openly complain about there stupid activities which since they havn't yet ceased to follow me around the internet anywhere they can and attack me.

Steve is also on the usenet trolling people under the name of Richard Cranium (richardcranus@yahoo.com) He's far too much of a coward to debate anyone using his real name.

The old 'I can't answer that so look it up yourself' stuff.
OK, I looked but did not find an obvious link to tuning up an
amplifier. Perhaps you could post the exact link to this.

> aware. Think: If you are trying to contrive an antenna that's smaller
> than a hertzian antenna, are you going to use the hertzian principle?
> ...uh, probably not!

No, but you still have to deal with Maxwell's equations, and the inverse
square law.

> A maser doesn't radiate? Since when?

Since forever. A maser is an amplifier, not an antenna.
http://einstein.stanford.edu/gen_int/faqs/maser.html
It would also be pretty big, since the waveguide would have to be large
enough to have the wavelength at 27 MHz be shorter than the waveguide's
cutoff frequency.

> >As you point out below, once you hit the noise floor, the maser is way
> >overkill.
>
> What does the noise floor have to do with a maser?

The maser is an amplifier. When you're using it as a receive amp, it's a
damned low noise amp.
But, as you pointed out, you really don't need that good an amp.

> >> When your radio already receives the noise floor, a preamp only makes
> >> it louder. You can do that with the volume knob.
> >
> >True, but how many CBs are already there?
>
> ...huh?

How many CBs have that level of performance on the receive side?
It might be interesting to make noise floor measurements on a few popular models.

> >It's another space to use for compromise.
>
> It must be way past your beddy-bye time, cause you aren't making any
> sense at all.

When you are looking into a design, you find that there are several directions (or spaces) to compromise into. The old saw "better, faster, cheaper, pick any two" is a good example of a three dimensional space. Many problems have more than three dimensions to them. Some have less.

That was an interesting day. We were right near the end of the track, with F2 damage in delaware county. I made the front page on the local paper the next week, when they did an article on storm spotters. The reporter who was with me on friday got a pretty interesting ride.
The interesting thing was that nobody predicted anything severe. It was a rare collision of hurricane remanants with a descending cold front. The storm "surfed" the leading edge of the front, which was the only place where it could have picked up enough energy to survive.
CAPE values that day were only about 500, which is barely enough energy to support a significant thunderstorm.

amateur
> radio operators almost became casualties themselves.

True. It's very hard spotting these HP cells, because you are in front of them, and there's a real danger of being overrun by a rain-wrapped tornado.
We spend about half of our training time on spotter safety.

Hi Brian,

It depends on who put the amp together. I have seen some
that were put together very well with a professional look inside
and then there are some that looked like a child assembled it
using a Bic lighter to solder. Whatever you do, be sure that
you are able to look inside at the construction work.

Hope this helps
Tom

Guess I should 'a been a little more clear. One of the guys on 27, I think it's "Voyager", hides out in his truck when he's on. His wife doesn't seem to like CB much at all. I only have a girlfriend no wife, I do call her my wife sometimes. In the future if I say wife or girlfriend you know they are the same person. I try to lead a very plain risk free life. I used up my allotment of "free passes" growing up, step outta line these days and I know my luck wont hold like it used to.

On the subject of "Dave's" I would have to agree there are entirely too many on this News Group. I've been thinking about changing my name on the group, to avoid any confusion.

What freqs do these militants operate on..?
Are they linked in any way to Al Queda or Bin Laden..?
There's already enough foreigners who are non-hams
taking up residence on 40 and 80 Meter SSB late
at night. Much of it coded/strange transmissions
late at night on the lower end of 40 SSB.

I'm new to the CB world. I've got a Jeep that I'm outfitting for the trail and I need a cb...

I understand some of the VERY basics, like, don't skimp on the antenna, buy a good one!

Where can I buy (on and offline)?

Anything else you wanna share will be appreciated.

I'm sorry Dave but in a news group you have no rights. Most certainly you have no First Amendment rights. Believe it or not a news group (moderated or not) is technically a privately owned entity and as such you CAN be censored, and have no recourse against such censorship. You can espouse your views freely in the USA, unfortunately that means "Public" property. Property owners have the right to squash speech they don't like. There is no such thing as free speech on the Internet. Unless you own the domain, the hosting servers, ect. Then somewhere down the line you can legally be censored even on your own web pages. Hell individual ISP's could censor you by blocking their subscribers access to you. All very legal in the U S of A.

They were about 1/2 to 2/3 the price as far as reltals go compared to where i live now which is also where i lived prior to moving to the Nashville area. I am within 30 miles of NYC so as you can guess housing up here is a little high. Utilities and food and soforth wilkl be about the same.
You will also find that unless you are being transferred such as I was , the wages SUCK!

Interesting, but that is the Chesterfield islands. I think some of the questions have revolved around unlicensed operation above 28.000. Obviously, not all of the world has the same amateur bands as the US. 10 meters is, I believe, a world wide amateur band; however, that does not preclude one or more countries from authorizing more for their amateurs. I do believe they are licensed and therefor can go above 28.000 and, if their government authorizes it, can go below as well.

> When you get that close,look for the antenna(s).

True, as long as there's only one.
It's a bit easier on CB, harder to hide the antennas :)

I did a hunt once, where I used a transmitter consisting only of two 19" pieces of magnet wire, and a diode.

It was illuminated from across the street with two 10Ghz gunn horns 146.565 mhz apart.
The diode mixed the signals, and radiated them on the difference frequency.

It was a short range thing, but amazingly powerful given that there's no conventional power source.. At 10GHz, a 17dB horn is something you can hide under a hat!

They did eventually find it, but it was a brute force physical search.
Great fun watching them digging around in the weeds!

Thanks for the advice, guys. Can you point me to any ham hobbyist websites (I'll check the ham newsgroups, too)?

They just got on again - now it's not just Albert, but a woman calling herself Boss Lady, asking everyone she talks to "What's your 20?" about fifteen times in a row. Guess she's in love with radio-lingo. She's also identifying herself as "172 in St. Louis, MO," does that number mean anything?

I tried removing my receiver's little FM antenna, that didn't change anything.

I might try disconnecting my coax to the TV entirely next time, I think it's the TV itself picking up the signal. Their voices blast through

I took a drive around, but there are just way too many trees in my area. I'll see about picking up a CB with an S-meter that'll run off my car's adapter. I doubt I'll need much of an antenna to pick this guy up.

I'm perfectly willing to try filtering it out at my end, too - what would I need for my TV? The sound *only* comes through the television's speaker, nowhere else.

I ran one of these on 10M years ago, I just left off the spring. Tuned up beautifully at 28.400
I've worked Japan, Vladivostok, and Ontario while driving up and down I-5 in California.
Inline switch let me share it with the CB rig, which is actually more useful on long drives than the 10m rig. A bit higher SWR on the CB band, but still acceptable. One night I was stuck in snow at donner pass, and the only guy I could get through to on 10, was in Pensylvania! Not much help on road conditions there.

It was deaf as a post at first, because I forgot about the feedline length. Once I had it trimmed to 1.5 wavelengths, everything was fine.

I need to work out a low band antenna for the new rig.
I really don't want to go through the roof again. The front antenna was sort of ok, because there's a console right below it, and I didn't have to mess with the headliner. Lots of room in the back, between the dual band larsen glassmounts for SSTV and APRS, but it's also a high rig already, whatever I do has to come down to a couple inches or less when I need to park indoors.

I've looked at the screwdrivers, but all that weight, mounted down low, I just don't believe it will last.

For a jeep and offroading, consider using a five foot fiberglass type
antenna.
stainless steel whips tend to get caught in trees.
Then include the smaller size flexible mount so it won't snap in two.
Look around your local wal-mart, best buy, circuit city for the radios.
Some will sell the antennas too. But not a lot of selection.
For a wider selection of radios, try a major truck stop, which will also
have the antennas.
Most radios are about the same. It's all in the extra frills you want to
include, and how much you're willing to fork out for one.
A $40 radio works the same as one for $200.

For a jeep, cheaper is better.

> nowhere else.

If you've removed the TV antenna lead, there's not a lot more you can do.

If it goes away when you remove the antenna, you need a high pass
interference filter.
I think you can still get these at radio shack, but I'm not sure.
Be careful that it's not happening in your cable box, that has a receiver,
descrambler, and tv transmitter inside, lots of opportunities for signals
getting in there, but they are usually very well shielded.

He could be coming in at his second harmonic (27 MHz *2) into your TV's IF
frequency, or direct rectification into the audio amplifier.

Does he mess with the picture at all?
If not, that points more to the audio section. If so, more to the IF or
tuner.

Either way, you'll need someone qualified to get in there and install the
right filtering/shielding.
Lethal voltages in there.

IMHO, he should ease up on the warp drive.
This is one reason high power isn't allowed on CB.

And I remember clarifying your remark about how the church would
dictate the sciences. Is there something you don't understand about
that, or do we have to go full circle one more time?

>> >You can only go where physics will let you.
>>
>> And those limitations are constantly being stretched through research
>> and development of new technologies.
>
>Truthfully, they are always the same, we just keep finding out more about
>what they are.

The difference is that once the scientists declare something to be a
'limitation', that limitation is somehow exceeded later by new
discoveries and research. Like it was once believed that the atom was
the fundamental building block of matter; then came the sub-atomic
particles such as the neutron, proton and electron. Later they
discovered that even those are made of quarks, etc.

In other words, the limitations are declared by the physicists, not
the physics.

>> More of that pesky conventional wisdom. Your physics textbook doesn't
>> cover everything that's possible, as my detractors are so blissfully

>> than a hertzian antenna, are you going to use the hertzian principle?
>> ...uh, probably not!
>
>No, but you still have to deal with Maxwell's equations, and the inverse
>square law.

Maxwell's equations are the electromagnetic equivalent of Newtonian
physics: generally true, but certainly not the whole story. As for the
"inverse square law", that's a mathematical observation used to
describe most natural phenomena; so what's your point?

>> A maser doesn't radiate? Since when?
>
>Since forever. A maser is an amplifier, not an antenna.
>http://einstein.stanford.edu/gen_int/faqs/maser.html

Of course it's an amplifier, but it's output happens to be microwave
radiation:

http://www.fda.gov/cdrh/devadvice/311.html
http://www.factmonster.com/ce6/sci/A0832083.html
http://aol.bartleby.com/65/ma/maser.html
http://www.phys.unsw.edu.au/~mgb/mgb.html

If you do a little research (and I do mean a LITTLE), you would even
find that the maser clocks use a microwave receiver to detect the
microwaves that are radiated from the maser.

>It would also be pretty big, since the waveguide would have to be large
>enough to have the wavelength at 27 MHz be shorter than the waveguide's
>cutoff frequency.

Not necessarily, and it wouldn't even need a waveguide since it's not
microwaves were using. All it requires is a substance that radiates
it's quanta at 27 MHz.

>> >As you point out below, once you hit the noise floor, the maser is way

>But, as you pointed out, you really don't need that good an amp.

I wasn't talking about using it as a receiver amplifier. A maser isn't
reciprocal.

>> >> When your radio already receives the noise floor, a preamp only makes
>> >> it louder. You can do that with the volume knob.
>> >
>> >True, but how many CBs are already there?
>>
>> ...huh?
>
>How many CBs have that level of performance on the receive side?
>It might be interesting to make noise floor measurements on a few popular
>models.

If you can turn up the volume and RF gain to the point where you hear
noise, that's the noise floor. I would have to say that most, if not
all, CB radios can do that, assuming they are functioning correctly.

>> >It's another space to use for compromise.
>>

The only visual distortion I notice is when I've got the TV muted. The word "MUTE" is printed across the screen. When Albert keys down, that indicator jumps crazily up and down from the top of the screen to the bottom. Other than that, it's all just very loud sound.

I picked up a little handheld Cobra unit with accessories to run it either walking around or in my car. Any advice for keeping a magnet-mount antenna from scratching a car's finish? <g>

Hi Jamey, My name is Woody Parr and I'm up the road in Cornelia. I'm
afraid that I'm indirectly responsible for this troll who is
badmouthing you at alt.religion.urantiabook. You see he was only there
in the first place to attack me.

This idiot is Steven J. Rogovich, 1612 Lake Christopher dr. Virginia
Beach, Va. 23464 He followed me to the UB usenet page from
alt.radio.pirate He and I (were) both formerly loosely associated
with each other in the shortwave pirate radio listening hobby. I USED
to be a shortwave pirate but my station has been permanently retired
for more than 2 years now. Stevie is still a pirate and is the
operator of the station Radio Free Speech. He is also the moderator of
a message board at the Free Radio Network < www.frn.net > and goes by
the handle of Pat Murphy there. I had a falling out with the people at
the FRN a couple of years ago as they became corrupt and were doing so
inappropriate things. I dared to open my mouth and openly complain
about there stupid activities which since they havn't yet ceased to
follow me around the internet anywhere they can and attack me.

Steve is also on the usenet trolling people under the name of Richard
Cranium (richardcranus@yahoo.com) He's far too much of a coward to
debate anyone using his real name.

> And I remember clarifying your remark about how the church would
> dictate the sciences. Is there something you don't understand about
> that, or do we have to go full circle one more time?

Physics is nature. It dosen't depend on us for anything, it just is.
Religious dicta aren't physics, no matter how much some people might like
them to be.
The "laws of physics" are a set of rules, which as yet have stood all tests,
and model the behaviour of the physical universe quite well. They are under
constant threat of revision, but only by stronger (and usually simpler)
laws.

Pick up a copy of Asimov's guide to Physics. It's a great book, covering
everything from mechanics to quanta, and it reads like a novel.

> The difference is that once the scientists declare something to be a
> 'limitation', that limitation is somehow exceeded later by new
> discoveries and research.

That's how science works.
The real limitations are out there, but we almost certainly don't know them
all yet.
We know a lot of them, in pretty good detail.

>Like it was once believed that the atom was
> the fundamental building block of matter; then came the sub-atomic
> particles such as the neutron, proton and electron. Later they
> discovered that even those are made of quarks, etc.

Ok, but each theory was an accurate description of the universe in it's
time, within the limits of what we could observe and quantify. The Greeks
couldn't have designed radio antennas, they had no theory to stand on. They
made lots of metal things like spears, that aren't too dis-similar to
antennas, but this application is only coincidental.

> In other words, the limitations are declared by the physicists, not the
physics

Physics (nature) defines the limitations. Physicists find the limitations
for us by studying nature.

> Maxwell's equations are the electromagnetic equivalent of Newtonian
> physics: generally true, but certainly not the whole story. As for the
> "inverse square law", that's a mathematical observation used to
> describe most natural phenomena; so what's your point?

You can't design until you have a workable theory.
It's not just a matter of some garage tinkering to create things that require a new understanding of electromagnetics.

> >> A maser doesn't radiate? Since when?
> >
> >Since forever. A maser is an amplifier, not an antenna.
> >http://einstein.stanford.edu/gen_int/faqs/maser.html
>
> Of course it's an amplifier, but it's output happens to be microwave
> radiation:

Theoretically, a maser could be built at any frequency, but construction and materials may prove difficult. YOU brought it in here, I didn't suggest it.

> If you do a little research (and I do mean a LITTLE), you would even
> find that the maser clocks use a microwave receiver to detect the
> microwaves that are radiated from the maser.

I know what masers are.
And this relates to CB antennas how?

> Not necessarily, and it wouldn't even need a waveguide since it's not
> microwaves were using. All it requires is a substance that radiates
> it's quanta at 27 MHz.

I said the implementation might be difficult. Remember, it was your idea, it's not up to me to defend it.

> I wasn't talking about using it as a receiver amplifier. A maser isn't reciprocal.

It dosen't have to be. Use two. Use a pair of switches. Use a couple circulators.

> If you can turn up the volume and RF gain to the point where you hear
> noise, that's the noise floor. I would have to say that most, if not
> all, CB radios can do that, assuming they are functioning correctly.

In a limited way, that's correct, but not in that way.

The noise floor is an expression of how much noise the receiver itself produces.
There's always some. In an ideal receiver, there would be none, and it's noise floor would be infinitely low. You wouldn't hear ANY noise at maximum gain. This isn't reachable though in practice.
Any real receiver reaches a point where an injected signal at some low level produces no appreciable output. There's your noise floor. -120 - -140dBm is sort of typical.
If you've got a good front end, you should be able to tell wether jupiter is above or below the horizon. How nice that we have a convenient weak signal test source :)
It's not quite that simple, as Jupiter isn't a constant source. See:
http://www.radiosky.com/rjcentral.html

There's also a certain amount of natural noise in the environment, at a given frequency, from various sources. Once your receiver's noise floor is below the natural noise level, you've done all that's useful to do.

Point being, a good front end, a quiet receiver, and a good antenna are about all you can do.

> >When you are looking into a design, you find that there are several

>
> Well then, are you content with being a flat-lander?

I try to use all the directions that are open to me in a given problem, that was just a simple illustration.

>
> Dave
> "Sandbagger"

I guess this means that when skip dies out you expect the bands to clean up a little in your area? During the day the bands are *almost* unusable in my area. Way too many signals and quite a bit of skip coming in.You can be heard but there's just so much noise that you really need to be close to your target if you want reliable communication. And this works fine if your communicating on the highway. Not good for talking to those friends who are just barely in range of your radio. In the evening when things slow down, the bands are almost 100% clear of "noise". You'll find a fair amount of traffic on 17 (our local truckers channel) and you'll get sporadic traffic on 27, just depends on how talkative the locals are that night. The rest of the legal 40 is wide open for anyone to jump on, but in my reception range they see only moderate use.

Dave

Sounds borderline. I would expect more severe distortion if it's getting in
through the tuner or IF.

> I picked up a little handheld Cobra unit with accessories to run it either

> from scratching a car's finish? <g>

Cleanliness!

They tend to pick up rust particles over the long term, but if you clean the
place where you're going to mount it well, you should be ok. Make sure
there's no scratchy edges on the mount.

You might not need the antenna at all in this case, it sounds like he's
coming in by direct rectification in the audio, which means he's probably
very close and/or running a lot of power.

You might ask around to borrow a field strength meter. RS sells one combined
with an SWR meter. When that starts picking up, you're within rock-throwing
distance.

actually its more funny that the hams got VERY uptight about the whole thing assuming that the freebanders and expedtition members must be operating illegally when in reality that part of the band and that mode is totally legal there. the real truth was that they were bothered that the guys were working 11 meters and making more contacts there than on the ham bands and it bothered them to take back seat to so called "cb'ers"

Only if you believe the grand unification theory. Heck, I don't buy
that 'big bang' bs, and even relativity has a few problems. But that
still doesn't negate the fact that physics provides more than one way
to skin a cat.

>Pick up a copy of Asimov's guide to Physics. It's a great book, covering

Asimov is a science fiction writer. I would recommend a basic HS or
college physics book, and keep a Van Nostrand's within reach.

>> radiation:
>
>Theoretically, a maser could be built at any frequency, but construction and
>materials may prove difficult. YOU brought it in here, I didn't suggest it.

I did suggest it as an alternative. There are many alternatives. Or
didn't you understand my very first post in this thread? Some
alternatives are better than others. Such as using 96 'pills' instead
of a 4CX5000. That would be considered a poor alternative.

>> If you do a little research (and I do mean a LITTLE), you would even
>> find that the maser clocks use a microwave receiver to detect the
>> microwaves that are radiated from the maser.
>

>I know what masers are.

Obviously you don't if you don't know they radiate.

>And this relates to CB antennas how?

Maybe a coherent radiator could be designed based on the functionality
of the maser. Don't know until you try it. Have you tried it?

>> Not necessarily, and it wouldn't even need a waveguide since it's not
>> microwaves were using. All it requires is a substance that radiates
>> it's quanta at 27 MHz.
>

Who's asking you to defend it? Sheesh, where did you learn to read:
the Twistedhed School of Where-did-that-come-from?

>> I wasn't talking about using it as a receiver amplifier. A maser isn't
>reciprocal.
>
>It dosen't have to be. Use two. Use a pair of switches. Use a couple
>circulators.

Now you're talking!

>> If you can turn up the volume and RF gain to the point where you hear
>> noise, that's the noise floor. I would have to say that most, if not
>> all, CB radios can do that, assuming they are functioning correctly.
>
>In a limited way, that's correct, but not in that way.
<snip unnecessary and long-winded explanation>

If you had any experience in CB radio repair, you would know that the
front-end noise is only a small contributor to the noise floor -- the
vast majority is received RF hash.

>Point being, a good front end, a quiet receiver, and a good antenna are
>about all you can do.

Sorry, I don't buy into those conventional limitations. Did you know
that it's possible to receive signals considerably BELOW the noise
floor?

>> >When you are looking into a design, you find that there are several
>> >directions (or spaces) to compromise into. The old saw "better, faster,
>> >cheaper, pick any two" is a good example of a three dimensional space.
>Many

>>
>> Well then, are you content with being a flat-lander?
>
>I try to use all the directions that are open to me in a given problem, that

>was just a simple illustration.

You have to find those directions before you can use them. You can't find them unless you look. You are stuck in a conventional mode of thought, and it severely limits your dimensions.

2023. Re: heathkit amps any good?

Reality check here. A few of the guys were on the 10 meter repeater the other day discussing the fact that 10 meters **was** open, yet no one was using it. The problem is that the big guns go for 20 meters as it is usually open worldwide most of the day. Even 15 meters doesn't get near the use that 20 does. The fact is that 10 meters is often open and even during sunspot minima, sporadic e openings will often occur but seldom be noticed since so few people are there. Put even several thousand folks on the air on 11 meters and there is no way they'll miss a band opening. Put a dozen hams on 10 meters - all listening - and nothing will happen. There are contacts being made all over the world, but most of that is on 20 meters during the daytime (and perhaps a few on 15).

So I guess that (after much debate) the answer to my question is, YES ,some HAMS do run more than the alotted amount of power and are therefore classified as Federal Criminals. The amount of HAMS and the amount of power is not determinable but it is suffice to say that there are a sufficiant amount of illegal HAMS to warrent recognition.Thank you all for the information and heated de-bait (heheheh).

So is that the draw of big power -- "respect"? Knowing that you are
disrespectful of anyone else on the channel when you key up with an
amp, how does that deserve respect? Would you respect me if I stepped
on all your signals so you couldn't talk? Or maybe you think that a
person who screams really loud in a library is worthy of respect?

Putz.

Making a note to plan a trip to RS tomorrow.

He's on again. He comes through the CB no matter what channel I have it tuned to, so I haven't successfully been able to converse with him yet since I don't know what channel to talk back to him on.I'm getting some info that might tell you something, though, since he's discussing his rig with some other high-powered person at the moment. Here's some quotes, as verbatim as I can make them:

"I'm running a base"

"Powerchunk, Galaxy 55e, Texas Star hotplate,
all hooked up together"

"I can't run my power supply
too long 'cause it starts to
get hot"

"1400' above sea level"

"Nice talking to you, I gotta get back off the side here and let everything cool down"

He also says he's up here working temporarily. Hopefully I'll get lucky and that means VERY temporary.

Well, everybody thinks you're in the Rochester, NY area because the
reverse DNS of your machine taken the NNTP-Posting-Host portion of your
header indicates that your dialing a Point-Of-Presence in/around
Rochester (see below). If you're not in that area, one would wonder why
you are dialing a POP in Rochester, when you could use any of the several
hundred POP's LocalNet offers nationwide. I can't imagaine why somebody
would purposely inccur long distance charges to use the internet. To the
best of my knowledge, LocalNet doesn't offer an 800 number either.

I dunno. I don't really care where you live. But I am curious...why in
the world are you dialing a number local to Rochester, NY if you don't
live anywhere near there?

Anyway, here's why people figure you live in/around Rochester, NY
(snipped for brevity):

**** Begin Ultra-Nasty dig results ****

[root@r2 root]# dig @ns.localnet.com 251.10.153.66.in-addr.arpa PTR
(snip)
;; QUESTION SECTION:
;251.10.153.66.in-addr.arpa. IN PTR

;; ANSWER SECTION:
251.10.153.66.in-addr.arpa. 86400 IN PTR ppp251.tc-1.roc-
pt.ny.localnet.com.
(snip)
[root@r2 root]#

**** End Ultra-Nasty dig Results ****

Note the answer section (ppp251.tc-1.roc-pt.ny.localnet.com). If you
don't want people to believe that you live in or around Rochester, NY
then "Lucy, you got some splainin' to do!"

Take Care,

Asimov did many things, among them writing science fiction.
http://www.eternalnight.co.uk/books/a/asimovisaac/physics.html
You can't write good hard SF without knowing your science.
Have a look at the book before you make your judgement.

One reviewer writes:
"The two companion volumes to Isaac Asimov's Motion, Sound, and Heat-Light,
Magnetism, and Electricity and The Electron, Proton, and Neutron-are also
available in Signet Science editions. Each book can be enjoyed
independently. Together they form a major contribution by an author
acclaimed by the Saturday Review as "one of the few scientists who has the
gift of being able to simplify the complex," and by the Los Angeles Times as
"the type of writer needed in our time..[His books] bridge the gap between
scientists and non-scientists."

This three volume set is now available as a single volume.
http://search.barnesandnoble.com/booksearch/isbnInquiry.asp?isbn=0880292512&

There's a whole lot of ground to cover between a battery, a magnet, and bronze or copper, and radio. Granted they could have done Hertz's experiment, but they wouldn't have had anything to build a proper theory out of. No concept of electromagnetics at all.

They had a steam engine too, and did nothing with it. Pity.

> I don't even think that's conincidental...:-/

The roman army was in the end, just looking for ghetto blasters to hook up to their antennas?
:)

ANTENNAS radiate. A maser is not an antenna. A maser can be attached to an antenna.

> Maybe a coherent radiator could be designed based on the functionality
> of the maser. Don't know until you try it. Have you tried it?

One thing that science is useful for, is to evaluate an idea against what's known to be true, and decide wether that idea is worth persuing. I don't need to try it to know it's not a promising idea.

> >It dosen't have to be. Use two. Use a pair of switches. Use a couple

CB radios are somehow different from every other receiver?
Have you ever looked at the LO phase noise?
As long as the radio's noise floor is significantly below the natural noise,
you've done about all you can.. Narrowing the front end bandwidth will
help, but it's not very conducive to "freeband" operation. There are some
DSP tricks that can be done in the IF section, but it's not going to result
in those huge gain figures you were looking for.

> >Point being, a good front end, a quiet receiver, and a good antenna are

You mean like a boxcar averager, dicke switch, or synchronus correlator?
Not much applicability to AM voice though.

> You have to find those directions before you can use them.

True.

> You can't find them unless you look.

That's what scientists do. I'm not a scientist. I'm an engineer.

>You are stuck in a conventional mode of thought, and it severely limits
your dimensions.

I'm sorry you feel that way. My employers don't agree.

I don't feel a need to look in the industrial part of town to find a
shopping mall either, though there may very well be one there.

It's maybe a fine point, but given that it's legal for them to operate that station there, it's still illegal for anyone in the US to contact them on CB or "freeband". AFAIK, "skip" on CB is still outside the rules (yeah, I know it's done all the time), and the area outside the 40 channels is verboten. They may be making contacts in other areas where this stuff is legal, and that's fine..

I'm not gonna get wound up about it one way or the other. I won't be talking to them anywhere my ticket isn't valid. The locals will likely take care of any enforcement problems that might pop up.

Tim, I didn't see anything in your link that said WHAT band and WHAT mode are totally legal in WHAT country and for use by WHOM. Can you clarify?

If the "freeband" is legal for unlicensed use in some country, I'm certain there is some documentation somewhere on the web to back it up.

So do us a favor, post a link that describes that country's unlicensed 11 meter DX freeband privileges.

-A

> "Powerchunk, Galaxy 55e, Texas Star hotplate, all hooked up together"

The "hotplate" almost certainly refers to an illegal amp. Just looked them up on google, I found a place that sells these from 100W and up. Their 3200 (3200W??) goes for $1700.
Not sure what a "Powerchunk" is.
The Galaxy55e is a high end CB unit, not something you'll find at radio shack.

All told, he's spent a fair bit of money to be loud.

The type of interference you describe means he's got to have a lot of power, and or be really close to you. The inverse square law (a very handy tool) says that if you cut the distance between you in half, the power that he illuminates you with goes up 4X. It's derived from the surface area of a sphere.

> "I can't run my power supply too long 'cause it starts to get hot"

Sounds like highly questionable engineering. :)
Heat kills components. Electrolytic capacitor lifetimes are cut in half by a 10c rise in operating temperature. Transistors fail by metal migration (among other mechanisms), the hotter they are, the quicker the failure, though the rules are a bit more complex. 9th root of the temperature delta I think, but it's been a while since I looked at that one.

Interestingly, the type of interference you describe sounds like he's running a pretty clean signal.(!)
Being on all channels on your CB is symptomatic of the receiver front end being overloaded.
It's only got so much rejection of signals on other channels.

A TV with analog (slider) tuner might pick up his second or third harmonic, and let you get in closer before loosing sense of direction. Channel 2 (around 54 MHz) or channel 4 (81 MHz).
I've done this on 2 meter foxhunts, using the main system to get into the area, then switching to a receiver and antenna on the third harmonic (transmit freq * 3) to hunt close in. The typical ham transmitter puts out about 1 microwatt on the third harmonic for every watt on the main frequency. Some more, some less.

> He also says he's up here working temporarily. Hopefully I'll get lucky and
> that means VERY temporary.

You never want to wish ill on anyone, but maybe his lashup will fail, and you'll get some peace while he figures out what died.

Long ago, just after I got my ham ticket, I was laid up at home for a while. My upstairs neighbor was practicing his guitar, and I do agree he needed the practice, but I also needed my sleep. I talked to him about it, and got a big dose of attitude, and no improvement. If anything it was worse. Now it happens that when I got my ticket, I bought a handheld radio, and power amp, and a base antenna. I set this up in the apartment, and decided that as long as he was going to keep me from sleeping, I might as well talk on the repeater.

It turns out that every time I keyed down, the rectified RF from my transmitter at about 100W caused his amp to go dead quiet. (remember, he's probably 10-20' away) Probably I was affecting the bias circuit in the amp.. Eventually, he gave up on loud practice sessions, and maybe bought himself a headset. Since I could sleep, I did. We came to an unspoken accomodation.

thats because i never posted that. you guys (Anal and yeti) have gotten in to this "prove it" type of thing were nobody is taken at there word and everything has to be verified by 100 people agreeing and 1 million links on the web lol the place we are discussing is the chesterfield islands which fall under the jurisdiction of New Caledonia. it was posted and claimed legal by the ops who are actually running the dxpedition and the ones wrote this on the expeditions qrz page and verified via radio tonight with a good friend of mine Mr Mike from new caledonia on 27.520 usb. if you dont believe me or them than so be it. its your choice and you can verify or disprove what they say till your blue in the face and it wont matter to me.

>If the "freeband" is legal for unlicensed use in some country, I'm

I must be getting tired... Those numbers were right, in 1937. Wrong table.

http://www.qsl.net/tcarc-ntx/tvchfreq.html

Channel 2's still there, but channel 5 is where you'd get 81 MHz.
Sorry!

I only asked for some evidence other than a garbled, angry message on QRZ. What's the big deal? If you're right you're right and I won't squawk.

>the place we are discussing is the chesterfield islands which fall
under
>the
>jurisdiction of New Caledonia.

Then how about something...anything...that shows DX comms on freeband are legal for unlicensed users in New Caledonia? If an unlicensed freeband DXing hobby radio service existed in New Caledonia I would think there would be a lot more published about it other than a single garbled message on QRZ.

UKers are permitted FM only in that band. DXing on it is illegal. Can
you tell us what usage that portion of the band is intended for in the
UK? (Hint: it's not DXing)

Dan, read the links to the two RFI pages I gave you, it will help you understand where and how to use the ferrite split beads. Also be aware that one RS bead might not do the trick. Some nasty RFI problems may require using two or three in a row on the affected cables. That's why many folks buy 'em in quantity from Digi-Key (much cheaper).

I'll second that, beads are very effective when used right.
Put them as close as you can on the cable, to the device you want
protected.

If your initial post was a troll ("de-bait") designed to justify illegal CB operation by showing that some "bad hams" operate with more than legal power, you couldn't have hoped for a better poster boy to show up than "skipp", a real-life example of a bad ham. BTW, you can have him, the hams don't want him.

All I have on now, is the SG7900, and a pair of glassmounts in the back.
On the explorer, I had a 10/11 in the back center, and a doppler DF array in
the middle as well, plus scanner antenna in the front.

<snip book review>

I'm not criticizing the content, accuracy or even the credentials of
Azimov. Since I have not read the books you mentioned, I was simply

making my own recommendation based on the standard course structure
for the study of physics. If Azimov's books are anything like Sagan's
or Hawkins' science-for-the-masses approach (oversimplification, the
elimination of mathematical modeling, etc), then I will stand with my
original recommendation.

>> I'll agree that we know the limitations for most practical applications.
>But again, there are plenty of ways to pump EM into the ether.
>
>There ain't no ether, aether, or any ether bunny.
>There is wheeler foam though.

Now where do you get the idea that the ether doesn't exist? Despite
the historical and affectionate use of the word 'ether' (or 'aether')
by radio operators as the medium for EM waves, just what makes you
think that it DOESN'T exist? (Trick question -- think carefully!)

>When you find one that isn't described by conventional physics, but is
>repeatable by other experimenters, let us know.

What does that have to do with -known- methods of radiating EM energy?
It doesn't have to be resonant. Is that what you are hung up on, this
'resonant length' mandate? That's only for "hertzian" antennas. There
are many, many different types of antennas that are non-resonant, even
the original and very successful Marconi antenna. If you are thinking
that in order for an antenna to radiate 27 MHz then it must be 9 or 18
feet long (or some multiple of 1/4 wavelength), then you need to put
down your books and take a formal class on the subject.

Forget Hertz for a moment (I know that's difficult for you to do, but
do it anyway). Now, how many years was it between Faraday's first
electromagnetic experiments until Marconi's first trans-Atlantic
transmission? Not long, was it?

>They had a steam engine too, and did nothing with it. Pity.

As far as you know. They also had differential gearing, and made at
least one quite elaborate astronomical computer. And I'm sure they
didn't make batteries just to sit around on museum shelves 2000 years

later.

>need to try it to know it's not a promising idea.

Oh that's ridiculous. Any good idea is worth pursuing. Why do you
think that JPL has an open policy on accepting non-conventional

theories for spacecraft propulsion? Yes indeed, they are trying to
figure out if warp speed really is possible, despite Einstein's edict
that C is the limit. The reason is the exraordinary possibilities that
would be opened up if it were truly possible. But if you simply resign
yourself to the belief that something is impossible, then rest assured
that it is.

"I thought we were talking about antennas.."

I wasn't suggesting improving the design of the receiver. But now that
you mentioned it, there are several ways to reduce the environmental
noise. One of them is the use of directional antennas, which reduces
the noise from unwanted sources. Another is done by blanking the noise
with hash from a parallel receiver using the same antenna. Internal
noise can be drastically reduced using modern low-noise components
which are relatively cheap these days (funny, even a 6AH6 has a better
S/N properties than most of the semiconductors in use today). After
that you get into the REALLY radical ideas, such as real-time DSP
processing and heuristic filters.

Of course, it's much simpler just to use a different method of
modulation, such as FM or a digital mode, or even (..gasp..) CW.

>> >Point being, a good front end, a quiet receiver, and a good antenna are

Not quite. Didn't you check out those Part 15 links I provided earlier
in the thread? Not applicable to AM voice either, but it's hard to
laugh at picking out an intelligible signal that's 20 dB below the
noise floor.

>> You have to find those directions before you can use them.

Who knows, there might be something there you can't live without! And
if you don't find anything it's not a wasted trip, because you have
learned that there isn't anything there. Besides, it's fun to look.

Ok fine. You go ahead and put that $300 cb in the old jeep.
Next time you go into the store to go grocery shopping, I'm gonna walk in,
find you, and hand it to you.
Jeeps, specially soft tops, are not exactly security minded vehicles.
CB's however, are "hot" ticket items for thieves.

I bought a GE CB for under $50. Had it peeked and tuned.
40 watts of mod power. When I keyed down, I got heard.
Hell, I out talked billy big rigger with his super fancy converted
"president johnson".

Matter of opinion mostly. Avoid the newer ones, Messenger 250 etc. The 250 had a good receiver, but terrible selectivity. Loose as a goose! Find a nice Messenger 223 if you can. Also, many of the older "Sears" radios were made by Johnson! They were decent machines. I have a nice White face that does pretty well. Have fun.

I know this to be a fact! When I was a child in the early 60's, my grandfather was still running some heavy equipment he had built as experimental use for the government in the 30's, 40's, and 50's. These units were being run at the time on 440v and 660v in his house! I can also remember at the time of hos death when his Florida house was being sold the question was raised buy a few looking buyers why this house has such heavy electrical wiring. I had to pull the realtor aside and explain it to him. His house here in Jersey was rigged up the same way.
Train

. even jj agreed and he says

Would be interesting if you ever found out how those antennas are affecting
eachother. As far as transmission, that many antennas, in close proximity, can
affect SWR as well as radiation lobes. Reception I see now real problem.

"Got RF?"

Yo is right, Train. I have ALWAYS discharged them with a headlight or some other bulb to zero and had NO bad effects doing so. How about c cells in a DVM that lasted over 10 years, or a Skil drill battery lasting maybe more than that? Where do people come up with that voltage number nonsence?! Dave!

They LAST LONGER when you discharge them to zero. Even my Norelco shaver.
I'm talking about NI CADS only. I agree we should do what the manufacturer
says. My feeling is that we either discharge to zero, or don't discharge at
all (just charge when they get weak or low). I don't have the time or
mentality of an N8 to sit and watch with a voltmeter to yank the light bulb
off the battery discharge when it gets to a certain rate! We talking about
going all da way to ZERO. Then after you take the bulb off, it goes back up
anyway without the charger, right? !

NO they ain't "basically" the same radio." !
What do you mean by "best?" Best for WHAT ? The 25 is the most powerful when tuned up. The 139 may be, but may be off freq. since it's so old. The 32 is a Browning. The 29 falls behind the 25 as far as power.
Dave!

YEAH...YEAH...YEAH...
Yada...Yada...Yada...

Ban has been in place for Years but that
hasn't stopped me seeing one or two
of them for sale at virtually everh hamfest
I been to, and at weekend flea markets
in the Pa.NJ NY area. All you have to
do is sell them "for test bench signal amplifier
purposes" as a kit and the FCC can't touch
you. For an example see:

http://www.cbcintl.com/TriPower.htm

Know what also? I have NO PROBLEM with
these kind of sales. Their NOT illegal and only
hams with inflated egos seem to get upset
and like to play "radio cop" when such products are
marketed. There's alot other things to worry
about (like the looming loss of 440 mHz) that this stuff folks.

Ah hell, 6m hams like me would just jam 'em if they're on 50mhz. What
are the computers gonna do, chase me? (now watch... any second now,
"Aaron" will show up and tell me what a horrible lawfucker I am.)

BTW if you were on a 25-channel cordless phone back in '96 and you
heard an unexplained loud burp, that was me... but the dude with the
duck voice was Wall-eyed Andy, and Video Art was the guy with the
Spanish accent. Unfortunately no tapes exist of these hilarious
hijinks. Damn shame.

Guy Richards

WHO did this post origionally?

First of all, only N8's couSIN could of said some nonsence as that. IF it was boring, then WHY did I and thousands others get into it when we were teenagers or pre-teens? You are ONLY bored IF you watch TV ! QUIT watching TV !

Second of all, SAY NO to DRUGS ! You enter SATANS realm when you mess with such wickedness. GOD intended you NOT to mess with this junk. The same word in the Bible is used for Witchcraft and for drugs. Get on the CB for an "out of body" experience instead! Fear GOD, and KEEP his Commandments, for that IS the DUTY of MAN !!!

The michelson morley experiment failed to show it's existence.
http://scienceworld.wolfram.com/physics/Michelson-MorleyExperiment.html

My own theory, is that radio and maybe everything else is simply
disturbances in the wheeler foam. But, I'm not a scientist, and it's just
speculation on my part.

>If you are thinking
> that in order for an antenna to radiate 27 MHz then it must be 9 or 18

> Dave!

Try talking to the cell manufacturers, or electrochemical engineers.
(electro-chemists?)

This is a great example of why we have spec sheets on components.
While you may be getting away with it, it will not work for everyone.
If it's working for you as you say, then you got lucky, and all the cells in
your packs are very closely matched. It's certainly possible.

Assume you have five cells in a string. Assume one cell is slightly weaker
than the rest, and so will discharge first. Now at the tail end of the
discharge, this cell will go to zero first, then as the rest of the cells
discharge, the voltage across it will go negative. That is very bad for
the cell, and will further weaken it. Keep doing this, and you'll kill
that cell.

IF all the cells in the pack are very closely matched, and IF they stay that
way throughout their lives, then the extreme discharges are harmless. Note,
you can discharge single cells to zero harmlessly, since there's no
mechanism to reverse polarize them.

You have a couple devices that you're doing this on.

I have a printer design I'm about to release that will sell 10-20,000 units
next year, each with one or more 5 cell packs.
How many problems do I want with battery packs killed by improper
maintainance?

Finally, I'll refer you to 28.13 of McGraw Hill's Handbook of Batteries.
Should be available at a well stocked library.

No, they don't. Shallow cycles are less stressful on the cells.
Discharging any pack of three or more cells to zero is a very bad idea.

> Even my Norelco shaver.
How many cells? Many shavers have two cells. You can't get into reversal
with two cells.

> I'm talking about NI CADS only. I agree we should do what the
manufacturer
> says. My feeling is that we either discharge to zero, or don't discharge
at
> all (just charge when they get weak or low).

Bingo! There is no need to routinely discharge nicads or nimh cells before
charging.
The only case where this is useful at all, is with NIMH cells that have been
forced into charge depression by long-term overcharge. (probably by leaving
them on a nicad trickle charger)
In this case, you would want to give them several cycles to 0.9V/cell to
remove the charge depression.

> I don't have the time or
> mentality of an N8 to sit and watch with a voltmeter to yank the light
bulb
> off the battery discharge when it gets to a certain rate!

Buy a real charger :) I've seen dischargers done with dropout relays
carefully tweaked to the right point. Myself, I prefer a microcontroller
and a couple of FETs. The Atmel Tiny-26 is very well suited to this job.

> We talking about
> going all da way to ZERO. Then after you take the bulb off, it goes back
up
> anyway without the charger, right? !

There is a bit of chemical recovery when you pull off the load, but the
on-load voltage, and specifically the current through the weak cell is where
the problem occurs.

The Michelson-Morley experiment used an interferometer to detect the
passage of the earth through the ether at it travelled through space.
This was based on the assumption that the ether has an absolute
spatial position (the failure to prove this led to the development of
relativity). However, no consideration was made for the possiblity
that an etherial 'reference point' might be made to any gravitational
object (which, incidently, is also consistant with relativity). The
experiment did not disprove the theory of the ether; It only proved
that one of the conditions of the theory was wrong, not the whole
theory.

I told you it was a trick question!

What? Don't they last longer IF you discharge them to zero, or 1
volt? IF we don't have to discharge at all, then WHERE did we hear that we
had to to make it last longer?

AND what about what I heard to "rebuild" the cell when it goes bad. I heard
what you do is make it go all the way down & up 10 times and it will
re-build the cell, unless it blows it up, which I saw that once!

Dave!

Dave or Debby,
You must be thinking about some other amplifier besides
the SB-220 (or the SB-200). It can be used for modes other
than SSB. Is it big and heavy? Sure, so what? Any tube
amplifier that uses a high voltage transformer is going to
be big and heavy. As far as it being a piece of junk when
it's broke-down, aren't they all? They are no more difficult
to repair than any other 30 year old piece if equipment...

The Johnson White Face was the best base radio in my opinion if you forgo the Johnson Viking Series bases dating back in the 50's through 60's. Mobil wise the Johnson 352 and 40 Channel counterpart the Johnson 4040 were excellent radios the later having the O2A chip which could be easily modified with a double pole switch. The only real competitors at the time were the HyGain 5 and Tram Diamond 60's.

Wow so you went out of your way to email the moderator? You guys were
THAT terrified of the responses, you had to try and supress them? Why?
If you are right and many hams operate illegally, then why not let the
people on the list answer the question, instead of censoring it?

2098. Mark Radio Fords, NJ

Newsgroup: rec.radio.cb
Date: 2002-10-20 20:41:46 UTC
From: sir.oblivion@public.com
Message-ID: <3db31512_1@nopics.sjc>
Source record: 140876

Thought I add this to the fray acknowledging CB pioneers and those who unselfishly devoted them selves to the hobby. This is a repost of a similar subject I made almost two years ago.

I would like to acknowledge George Marklin of "Mark Radio" of Fords, NJ. Throughout the 1960's through the mid-eighties George or better known to his customers simply as Mark was a shining example of CB radio and it's uses.

As a teenager I would frequently visit his shop in the early seventies and literally drool over the Helicrafters, Apache, and Drakes that donned his shelves. Besides being a very early retailer in CB equipment Mark Radio also worked hard to teach and demonstrate proper radio etiquette amongst his customers prior and after the CB radio boom of the mid-seventies.

Throughout George Marklin was a strong supporter of 11 meters though he held an Extra Class Amateur license. He realized that the ranks of amateurs could be strengthened by capturing the interest of CB'ers.

I recall in the fall of 1977 when George asked me then a fourteen year old if I would be interested in obtaining an amateur license. I said sure and for the next several weeks George took from his time operating a business teaching me radio theory and Morse. The day I took my test and passed my 5 WPM code was among the proudest of my life.

It's been many years and George has left us but I can recall his basement shot, his backyard filled with antennas and a kind gentleman that took the time to nurture my interest in communication. For this and the many others that George touches he should be remembered.

I just took a ride up there only living about five minutes away. It's a pretty non-descript building and you really wouldn't notice it's construction other than the communication tower that looks as if it could withstand anything buried in yards of concrete.

Here's what I heard Sunday in just a few minutes of monitoring. (20:58 Z). All with loud ECHO MIKE effects....

28.265 (AM): "Who the f*k is she to be tellin him he can't bring that girl in his house? Burned all his f*kin logbooks, paperwork, ha ha!"

28.270 (AM): "Break break break" (pause) "Hey where you at?" (pause) "You got a copy on this old south east Texas copperhead?"

28.725 (AM): "You tell that g*d*mn dispatcher that any CCX driver wont stand for that sh*t"... (etc)

There you go with your delusions again timmyboy, there is no
'freeband' in this country. Just because you use those frequencies
does not make them free.

Message: [Amps] CB amps on e-Bay

Not harming us? Indeed they are. Here's how:

-CBers causing RFI/TVI in residential neighborhoods. Ham applies for permit to erect a tower and is denied because the neighbors, who have experienced this RFI/TVI for years, all show up at the zoning board hearing and protest "enough is enough" based on their bad experiences. Ham gets denied his tower. (This isn't a dream, this happens daily throughout the U.S. -- many documented cases.)

-CBers become dissatisfied with their measly 40 channel allocations and
begin spreading out, or "freebanding" as they call it, on to 10m and 12m
amateur bands, rendering those bands virtually useless in some areas. I
hear it every single day, hundreds of examples per day, this becomes thousands if the band's really open.

There probably isn't an amateur active on 10m and 12m anywhere in the world who isn't aware of this bad and growing problem. If all the CBers ran their legal power limit, the problem would still exist, but it wouldn't be quite as loud. Since so many are running amplifiers, it's worse.

Article text follows:

Directed-energy technology is ready to be used as weaponry and, in a mature state, one device carried by an unmanned aircraft could attack each of 100 targets with 1,000 pulses of energy in a single sortie, says a former director of the U.S. Air Force's high-power microwave program.

"Except for the standard rifle, gun, knife or grenade, virtually all military equipment contains some electronics" that are vulnerable to a large pulse of energy, wrote Air Force Col. Eileen M. Walling. "Military commanders are in a state of virtually total dependence on radios, telephones, satellite communications, computers and faxes for communication with military units." Other targets include artillery targeting devices, guidance and control on precision munitions, and even locomotive engines. She also suggests HPM could be used to protect U.S. satellites and attack those of a foe without creating clouds of debris that could damage other spacecraft.

Having spent most of her career working on directed-energy technology issues, she wrote a research paper on what she considers an underrated weapons technology. Entitled "High Power Microwaves: Strategic and Operational Implications for Warfare," it was published by the Air University's center for strategy and technology in early 2000. Walling is now a division chief in Air Force Materiel Command at Wright-Patterson AFB, Ohio.

"The projected maximum capability for a microwave [armed] UCAV is approximately 100,000 pulses of microwave energy (or shots) per mission," Walling wrote. "If one assumes 1,000 pulses per target, it is conceivable that a microwave UCAV could attack on the order of 100 targets per mission. In addition, a microwave system could be used to protect the UCAV from enemy missiles [even] if the enemy has the ability to detect low-observable aircraft."

HPM also affects a larger area than a bomb, but without harming physical structures or people. A 1-ton bomb creates damage in a radius of about 120 ft. "The footprint of a microwave munition is at least 100 times greater than that of a conventional munition," the report states. That may be a bloated number if applied to developmental weapons currently available for use against Iraq, according to other U.S. officials. They usually describe effects in terms of a few thousand feet or less. In fact, the primary stumbling block for directed-energy weapons is achieving sufficient range and power levels to be effective.

U.S. MILITARY RESEARCH laboratories have demonstrated HPM effects ranging from upsetting to destroying the electronics within military and commercial systems, Walling noted. The paper's conclusion, made more than two years ago, is that "high-power

microwave technology is ready for the transition to active weapons in the U.S. military." Both Defense Secretary Donald H. Rumsfeld and the chief of U.S. Air Forces, Europe, Gen. Gregory Martin, have said publicly that unspecified new developmental weapons technology could be used in an attack on Iraq. Facilities that manufacture, store or dispense chemical, biological and nuclear weapons are a "target set" particularly earmarked for energy weapons, according to statements made this summer and fall by U.S. aerospace industry officials. Conventional attacks could leave plumes of lethal agents adrift.

HPM devices have great potential both as offensive and defensive weapons, Walling said. She cited a 1998 Air Force survey--"Directed-Energy Applications for Tacti cal Airborne Combat"--that found the top four priorities were for microwave weapons (instead of lasers) in the areas of precision-guided munitions, large aircraft self-protection shields, small aircraft self-protection shields and as weapons for unmanned combat air vehicles. As a munition, some developmental systems are believed to be ready for combat in Iraq. Boeing plans to build an HPM weapon into the Block 30 version of its X-45 UCAV.

These weapons also could be built into a pod for carriage on a helicopter or packaged as artillery shells, scatterable mines and 1-ton bombs, the report said. As a defensive system, it contends HPM devices could ward off infrared- and radar-guided missiles. A phased-array antenna allows for rapid retargeting.

The report quickly ticks off the advantages of HPM weapons: They don't rely on exact knowledge of the enemy system. They leave persisting effects in enemy targets that may take weeks to find and repair. Even if enemy systems are turned off, they are still affected. And to counter HPM, the entire system must be hardened, which is a very expensive process.

An energy pulse can get into an enemy system by the "front door," which means its own antenna, dome or other sensor opening; or through the "back door," which includes cracks, seams, trailing wires, metal conduits of seals. Once inside, the emissions can destroy or disrupt integrated circuits, circuit cards and relay switches. The system's own electronic circuitry transmits the pulse, and resulting damage, even deeper into the

system.

In the microwave technical community, the ability to scale or increase the effects is often described as "dial a hurt," Walling said. Results depend on the distance between the HPM weapon and the target, the vulnerability of the target, the power generated, and the characteristics of the microwave emission including frequency, burst rate and pulse duration. A rough scale describes four levels of effects:

* Deny, which involves electronic upset or jamming. It might cause malfunctions within relay and processing circuits.

* Degrade, which involves locking up a system or limiting its capabilities enough to require rebooting. It can include signal override or turning power on and off at irregular intervals.

* Damage, which includes permanent effects that "latch up" a system. This can mean damage to components, circuit cards or mother boards, as wells as weeks to diagnose and repair the problems. Because microwaves can enter through multiple entry points, it is likely numerous circuits and components will be damaged.

* Destroy, which means catastrophic and permanent injury to the system, requiring total replacement.

ANTENNA TECHNOLOGY is crucial for HPM weapons. Field of view for the phased-array emitter is expected to vary from several to tens of degrees. The multi-element design allows it to be built conformally into a pod or UCAV. Because it doesn't require precise aiming, there are far fewer stringent pointing and tracking requirements, Walling said. The microwaves' cone could offer a means to attack multiple targets at once; for example, all of the equipment in an antiaircraft missile site.

The range of HPM weapons has always been a concern. Tests have shown effects at tens to "more than" hundreds of feet. Walling seemed more optimistic. "With current technology, the range for a tactical microwave weapon could be in the tens of kilometers, and future advances . . . should permit the development of even longer ranges," the report said.

Other advantages cited for HPM weapons are that they would be immune to the weather and could produce multiple shots on a single mission. However, the report also alludes to single-shot designs. These latter seem to address concerns that side and back lobes from the generation of an HPM pulse could affect the carrying aircraft's own electronics.

Power levels for HPM weapons are increasing. The report said one microwave source weighing less that 45 lb. radiated 1 gigawatt of power within a few nanoseconds. A 400-lb. system radiated 20 gigawatts. The report noted that Hoover Dam generates 2 gigawatts per day. The HPM weapon would draw power from the air vehicle's engines, which would let it make a number of attacks during a mission.

I've heard all sorts of NICAD battery mythology.

This could be a distortion of how to get an NIMH pack out of charge
depression, but you never want to take either sort to zero.

For maximum lifetime, 1V/cell is "dead", you can go to 0.9V for a little
(very little) more service life at the expense of cycle life.

If you're really into batteries, you might want a copy, but it's pretty expensive, $140-ish IIRC.
There's a lot of info in there, including some really exotic batteries.
Mine sits next to my non-loaner copy of "Art of Electronics". :)

You're a moron, Dave.. the link is broken up onto two different lines. Try pasting the whole thing into the URL window on your browser.

BTW, Great program on Mummies and ancient Egypt on Discovery right now.

Dave: You had 16.5 meters of coax? in a Jeep? That's like 52 feet of coax
in a mobile.. That doesn't sound too efficient.

Sounds like a commie theme--doing more with less!
US Americans have been doing more with more for YEARS. Biggie, Bigger, BIG radios. Actually Ham radios are bigger than CB's ! Does the word BIG scare you pinkos? If you want less, sell your SUV and get a shartruce micro bus, rubber duck!
Dave!!!!!!!!!!!!!!!!!!!!!!!!!!!!

2139. 40 Channel Radios

Newsgroup: rec.radio.cb
Date: 2002-10-21 00:10:45 UTC
From: radiofun <radiofun@mchsi.com>
Message-ID: <9CHs9.35676$%d2.20925@sccrnsc01>
Source record: 140966

Someone asked the other day if there were any 40 channel radios that weren't "digital". There were very few. Here was one:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1390769536

Have you tried in Hampshire, IL. Off of the NW Tollway mm 36 at the Clark station (next to McDonalds) (there is 3 truck stops at that exit). At least that is what I was told.

"tools" medtools@earthlink.net wrote
>I do not belive you.

I don't blame you for being skeptical about claims made on this NG, but it sounds like the only way you would believe me is if you and I were sitting in the same room in front of the same radio and both of us heard this stuff at the same time. Us getting together to do that is not likely so I guess it's your word against mine. But how about other people who hear this stuff? Are they making it up?

I know of three right off the bat, on I-75 across from the Flying J at
exit#3
place called Bronco's, exit#97 in the T/A and exit#204 by the T/A in
Jackson.

Can anyone tell me what one of these radios is worth used in great condition?I have an offer of a trade as they want a RCI 2950 I have and will trade me even up.He just wants a mobile and not the base.
My instincts say go for it.I know the person,and do know he keeps his equipment in mint shape.I just need to know what it is worth if I want to sell it as I may do.I don't use the 2950, and I doubt that I will use the Galaxy .Email me if you got any info that may be of help.Thanks for any help in advance.

No big deal. I've had a few that were not digital readouts.
although I think you can see the numbers better on a digital readout.
takes up less space.

This is interesting since CCX doesn't operate on Sundays.. They are a
Mon.-Fri. Op only. Also CCX isn't located that far south. CSE yes, but no
CCX.

If you have the ability why not record several ".wav" files and post
them on the Ham binary news group? That way the still disbelievers can
hear it for themselves. Its even more convincing when the pirates are
being covered up by a bunch of ticked off Hams banging away with CW on
top of the bozos. Nothing more convincing than hearing a Ham ID in CW
over a pirate operating AM on 10m. If a tape recording of something
like the above is good enough evidence for the FCC, then its good
enough proof, period.

You think so? There was a vendor sell HF amp kits at Dayton a year or
two ago. The Detroit FCC, part of their area is Ohio, paid them a vist
out in the tent area, at the far end of the flea market. Guess what?
They, the amp kit vendor, haven't been back to Dayton since.

If you know the characteristics, there are several vendors such as MaCom, Alpha, etc. that make them. What you are talking about is a hyperabrubt varactor diode.

I had a couple of those GM23s. Selectivity wasn't the greatest; it used a Murata 4-element ceramic filter, but construction was good, with a glass-epoxy circuit board.

The problem with recording .wav (or mp3) files is that while it would verify content, and most likely identify the type of operator, there is no way to verify frequency. If, as you alluded to, you get lucky and happen to catch these guys while a CW QSO is in the background, that could be helpful, but it still won't convince this tough crowd, who would most likely accuse you of "doctoring" the file to suit your purpose anyway.

> Someone asked the other day if there were any 40 channel radios that
> weren't "digital". There were very few.

Are you refering to "digital" readouts, or "digital" frequency
synthesis?

There were many 1st generation 40 channel radios made with "23 channel"
style numbers on the selector itself. Lafayette, HY-gain, Kraco,
Midland, GE, a few Radio Shack models just to list a few. Most were
Cybernet chassis radios, as well as a few Uniden types.

As for non-PLL type digital synthesis, I am not aware of any 40 channel
radios that did not have a PLL. I beleive the tighter FCC specs for 40
channel radios precluded the use of the "old fashioned" crystal
synthesis. Plus, crystals were becoming expensive. The cost of 17
crystals is more than what a typical 40 channel radio sells for these
days.

If you agree to those terms, then you are correct. But to imply that one could be removed from an ISP, for taking an opinion, contrary to another (who is ironically in favor of opposing federal laws) seems to be a bit of a stretch.

Tell that to the K.K.K., the skin heads, and other "hate" groups who operate their web pages, seemingly with immunity, not that the feds haven't tried to have their sites removed. But something about their first amendment rights allows them to continue.

I find it ironic that groups like the K.K.K. can operate without issue, yet people who stand up for the law of the land and common courtesy, need to fear revokation of their ISP privileges for standing up for what is right, simply on the word of one or more malcontents?

You get the prize!

I'm not sure if anyone outside the greater Phila area, remembers Jerry.
For those who don't, Jerry Blavat was a sort of Dick Clark wannabee. He
hosted a dance show on one of the local Channels (WFIL-TV6) back in the
mid to late 60's. He used to do some sort of move where he jumped
around on one foot. I remember catching the show in my younger days. If
I remember correctly, it was on at 4:00 in the afternoon. He resurfaces
occasionally to do "oldies" parties. I'm not sure if he's still alive at
this stage of the game though.

Cross-posted to: alt.radio.scanner,alt.radio.scanner.flame_fest,rec.ham-radio,rec.radio.cb,rec.radio.scanner

This scanner is brand new, unopened and not refurbished.

Full, continuous coverage from 530 kHz ~ 1650MHz.

(No gaps, locked out or restricted frequencies)

Any mode from AM, Narrow FM, Wide FM together with Upper & Lower sideband. Increment steps vary from 1 kHz up to 100 kHz although when LSB or USB is selected then increment steps as small as 100 or 50Hz can be used allowing for true and accurate tuning of utility stations.1000 CHANNEL MEMORY (100 CH x 10 BANK), 500 CHANNEL PASS MEMORY

Comes with antenna, car connector, NI-CD batteries (4), hand strap, belt clip, earphone and English manual + Owner's guide and Operating Instructions by Richard J. Wells

Price is $260 US + shipment

If you have any questions, please do not hesitate to contact me:

Considering the magnitude of the interference that you're getting, I
doubt that anything other than your two eyes in the daylight should be
needed to find this guy.
It's not like the 70's where every other house had a CB antenna on it.
Likely there will be only one close to you, and that's probably your
man.

> Would a unit with a signal-strength meter help in narrowing down the

A handheld field strength meter would be helpful in confirming what your
eyeballs told you is the probable location of the offender.

> > If it's not the person, ask if the person would help hunting the guy down.

Judging from the content of his CB traffic, indicates that he's probably
not the most amiable person to deal with. Especially when you have a
problem which threatens his outlet for ego pumping.
Approach him in a friendly way, but don't be surprised if he blows you
off, or worse.

This is a common scenario for many owners of home entertainment equipment. Many people spend thousands of dollars on expensive high definition TV's, home theatre equipment and accessory video players. Most of this is connected by cables, which all many contribute to the problem. But be that as it may, no one, who has spent this kind of money on their TV entertainment, wants it to be disrupted by some yahoo, talking trash on a radio. Typically, the next step is to contact the FCC, but be forewarned, the FCC has received so many similar complaints, that it has become desensitized to your situation, and you'll be lucky if they even send out a notice to the offender informing him of his alleged interference problem.
As someone else pointed out, there is legislation allowing local law enforcement to enter the picture. But not all LEO's have written thier laws to take advantage of this.

Some locals in my area have successfully had an offensive CBer prosecuted on a "disturbing the peace" charge, which arose from the CBer in question's use of foul language, and offensive content. You might have to retain a lawyer, if it comes to that, depending on whether or not the LEO's in your area are interested in pursuing this case. It helps if you can gather a bunch of the neighbors to sign a group complaint.

Ah hell, 6m hams like me would just jam 'em if they're on 50mhz. What
are the computers gonna do, chase me? (now watch... any second now,
"Aaron" will show up and tell me what a horrible lawfucker I am.)
BTW if you were on a 25-channel cordless phone back in '96 and you heard
an unexplained loud burp, that was me... but the dude with the duck
voice was Wall-eyed Andy, and Video Art was the guy with the Spanish
accent. Unfortunately no tapes exist of these hilarious hijinks. Damn
shame.
Guy Richards

Some of the first analog phones were filled with those succeptible
interference bugs. At one time, anyone could go to K-Mart or wherever
and buy the cheapest/best selling cordless phone and drive around the
well-manicured neighborhoods until you heard a dial tone on YOUR
handset. Technically and in strict violation of the law, one could park
in front of another's house with the same type phone (or not) and talk
on their dime.
And there were the recorded tones you could play into a public phone
that started way back when that gave free phone calls that paved the way
for more interesting ways to phreak.....

From: yeti@REMOVEcet.com
>So is that the draw of big power -- "respect"? Knowing that you are disrespectful of anyone else on the channel when you key up with an amp, how does that deserve respect? Would you respect me if I stepped on all your signals so you couldn't talk?
Putz.

On certain channels such as the bowl, keying up with an amp is not only not disrespectful of anyone else on the channel, it is the norm, expected, and yes, required. That simply is the way they want it, the way it is, and there isn't much anyone else can do to change these facts.
As far as anyone respecting you if you were able to pull off such a feat as to be heard on the bowl, I dunno,,,,maybe if you didn't let them know who they were talking to......but they wouldn't hold it against you and would still talk to you if they were able to hear you even if they didn't respect you. Wanna try? I ain't heard a Yeti or Sasquatch on the bowl, yet. You choose the time....I'll be the impartial judge. I'm sure others will volunteer to see if they can
receive your signal, also.

>I'm not criticizing the content, accuracy or even the credentials of Azimov. Since I havenot read the books you mentioned, I was simply making my
own recommendation based on the standard course structure for the study of physics.
If Azimov's books are anything like Sagan's or Hawkins' science-for-the-masses approach (oversimplification, the elimination of mathematical modeling, etc), then I will stand with my original recommendation.<
<
--

Your anomaly fails to recognize that an attempted analogy of science fiction writers is void for the most obvious reason. "Physics" is usually construed as the study of force, matter, motion, energy. Carl and Stephen's books both set forth theories and admit as much. I tend to think Hawkins approach more plausible than any others concerning such things as black holes (which theory was lent more credibility last week by scientists) and cosmic theories such as his "bang" interpretation. The "over-simplification and elimination of mathematical modelings" as you refer it, is tossed aside at times because they are just that, "models" that do not always apply in real time, life or world, giving way to "theories". Again, I take this opportunity to remind you that both authors readily admit theoretics. Clinging to the notion that if it can't be found in a book it simply must not be, continues to plague you. There exist many more unanswered questions than there does answers. Your exhuberance to exist contently in the dark while others think outside the box to acquire answers who then posit them in some type media form in order you accept them is well documented.

"Uncle Charlie" <timnebo@aol.com357> wrote in message
news:20021019194823.06911.00009920@mb-cq.aol.com... actually its more
funny that the hams got VERY uptight about the whole thing assuming that
the freebanders and expedtition members must be operating illegally when
in reality that part of the band and that mode is totally legal there.
the real truth was that they were bothered that the guys were working 11
meters and making more contacts there than on the ham bands and it
bothered them to take back seat to so called "cb'ers"

It's maybe a fine point, but given that it's legal for them to operate
that station there, it's still illegal for anyone in the US to contact
them on CB or "freeband". AFAIK, "skip" on CB is still outside the
rules (yeah, I know it's done all the time), and the area outside the 40
channels is verboten. They may be making contacts in other areas where
this stuff is legal, and that's fine..
I'm not gonna get wound up about it one way or the other. I won't be
talking to them anywhere my ticket isn't valid. The locals will likely
take care of any enforcement problems that might pop up.

Here is a scenario where none have yet been able to offer any plausible
answer with any great degree of certainty.
I go out on my boat beyond the boundary that constitutes international
waters from local waters...maritime law prevails. Usually, this would
include obeying the nearest governing body's law, but many gray areas
exist and are not directly addressed and are directly ignored and not
enforced at all...this is evidenced by foreign boats (from cruise ships
dumping their trash in the water to fishing vessels doing whatever they
want) breaking American law on a daily basis.
Gambling is the perfect analogy here..it is totally illegal in certain
states such as Florida, but once a casino ship hits international
waters, it's Las Vagas-ala-Poseidon. If I am in international waters,
can I hook up a freeband radio and talk on it legally? What is my power
limit, if any? I can't be bound to the laws of the state where my vessel
is registered as the casino ships are exempt and so are nudity laws on
private or chartered vessels (and probably a bunch of others) out at
sea. I can't be bound by federal law as the jurisdiction stops when
maritime is invoked. Cargo carriers are required to abide by the
"where-ship-is-docked" (closest governing authority) rule which is
usually tried and applied by customs. I admit to not inquiring of any
esquire or professional legal advice concerning this issue, as there is
a much better chance of hitting the lotto or getting struck by lighting
that facing problems when transmitting in such a manner that I do, but
it has aroused my curiosity.........a bit..

Maybe.,,,but doubtful based on your past.
Depends what you define as your "area". If you are talking of central to eastern Pa., and are speaking as of the recent past (say, last year or so).....show your hand.

>You might have to retain a lawyer, if it comes >to that, depending on whether or not the >LEO's in your area are interested in pursuing >this case.

Never EVER pay good money for a lawyer in this scenario. You can always go to court alone and ask what the disposition of the court is conerning your case. They will tell you exactly what they are seeking penalty-wise against you. If you can live with it, pay the devil his due and get on with it. If you disagree or do not like the offer, tell the court you wish to retain proper representation and they will reset your court date. Don't EVER spend money on a lawyer until you have exhausted this approach.
It can save you THOUSANDS!!!

>It helps if you can gather a bunch of the >neighbors to sign a group complaint.

:>If you were to spend a few minutes at the fcc web page like I suggested,
:>search licensed allocations in the IB or IG service that would fit
:>within the frequency range you list below.

: I have, and I have even posted a list of them to this newsgroup. So?

These services are allowed moderate (higher than traditional exciter
level) power operation >50 watts. Such services exist and are allowed to
use amplifiers.

:> Last time I opened a radio industry
:>magazine, Cresend Technologies sold type accepted amplifiers. Henry,
:>TPL, Motorola and a few others also come to mind.

: Yes, many companies do sell certificated amps, but not for the
: spectrum prohibited by 47 USC 2.815. If I'm wrong then maybe you can
: find a link or something, or maybe scan one of those magazine ads.

From what I understand and have experienced, there are qualifications to
amplifier production and type acceptance. Based on drive level
frequency... etc
I would be interesting to approach an amplifier mfgr for a 32Mhz amplifier
to see if they would even offer one for legal services.
HF and VHF Low Band are very low volume target markets (aside from the CB
and Amateur stuff)... Aside from any ban, I'm not sure if off the shelf
stuff would be made these days as the market has really dried up... Cell
phones really knocked the wind out of Two-Way Radio. So you are not going
to see expensive commercial mag ads specific to a single band amp. But the
dealers have phone numbers and email.

So I go to the October 2002 issue of Radio Resource Mag, call one of the
Equipment dealers shown from (memory) pages 96 through about 103 and ask
what they have in stock. After a bit of sticker shock, I get on Ebay and
hunt down a used type accepted amplifier for a fraction of the original
retail price. I have purchased equipment from both sources, the mag
dealers and ebay...

: BTW, what's the IB service?

The "B" of IB means "business."

:>The second question you asked..? It actually tells us how bad you want
:>to show your ignorance.
:>
:>No television I've heard of uses the 6146 tube as a sweep tube. There

:>were some older televisions that used the 6146 tube as a horizontal
:>oscillator and or horizontal oscillator amplifier.

: Well, why didn't you make that distinction in this post?

Had you posted the entire text for everyone to read, they would have seen
the topic was about sweep tube amplifier operation.

The wording is a bit off, but the point comes through... The 6146 tube is
not a true sweep tube, but has been used in similar applications,
functions. Both the 6146 and the classic sweep tube can be used in linear
rf amplifier circuits. The below text talks about function, not the
physical construction of the tube.

: ==============
: <snip>
: : simply list the filament specs, then tell you to use 6KD6 Specs, because
: : they are built with the same internal components. As fare as being
: : non-linear, EVERY amp has some non-linear properties. After all, they
: : are used in the real world, not just on paper. By the way, some early
: : color TV's used 6146's for sweep tubes.

:>Sweep tube is a label used to
:>describe a classic type of tube. Horizontal oscillator / amplifier was
:>often the function of sweep and beam power tubes.

: Where do you think the word "sweep" comes from? Maybe from television
: "sweep" circuits? You know, where the trace "sweeps" across the
: screen? What kind of tube do you think was used in those circuits?
: Maybe "sweep" tubes? Sweep tubes are power tubes that are specifically
: designed for sweep amplifiers in televisions. Duh...

There are tubes designed for specific horizontal oscillator - amplifier
operation. The 6146 was not designed specific for horzontal oscillator
- amplifier "sweep" service. By classic definition, it is not really a
true sweep tube, but it can and probably has served the same functions.

: Sweep tubes are not designed for use as RF amplifiers, nor are they
: designed for linearity at RF frequencies, despite your claims to the
: contrary. The Swans, which you so proudly claim to be a sweep tube
: success story, use them with significant neutralization, tuned grids &
: output pi filters. In fact, I believe that a couple of their sweep
: tube 'linears' used the sweep tubes configured as triodes in order to
: achieve linearity.

Wrong... most sweep tubes were not originally designed for use as linear
Mode RF Amplifiers. But there were some that were... the GE - 8950 and
the 2057 as two examples. Yaesu also has some whacky part number for an
RF Spec'd sweep tube they put in a radio... from memory, the FT-101 series
I believe...

With a bit of good circuit design, sweep tubes can be made to operate in
linear modes with good results. At one time, they were plenty cheap,

which made them a viable option.

The three Swan & Siltronix amplifiers I have using sweep tubes, do not have neutralization, nor does it have tuned grid(s) input. Grounded grid operation does not require neutralization in many of the classic designs. That's one issue which help make them so popular...

Your theory and experience shows to be a little thin on the topic...

Pi output circuits are pretty much the industry standard for similar circuits unless you know of something that works better..?

Most of the classic consumer amplifier circuits used sweep tubes in low mu operation. I would not label that a generic triode operation. "Grounded grid" or "super cathode driven" circuits were the layouts of choice.

: Sweep tubes were used in RF amps not because of their suitability, but
: because they were cheap. That's all.

They were practical, cheap and suitable.... Mfgrs like Swan, Ameritron, Amp Supply, Dentron, Galaxy, Palomar, Pal, SBE, Tempo and others thought them to be quite suitable.

:>Now go whine about how dumb you look to everyone on the news group.
: And leave you unhindered to spread your RF mythology? I don't think
: so, Skippy.

Red whine with fish..?

You've got some holes in your facts there buck'o. We can edit this down if you want to get into specific topics or continue your broadside attack.

just having fun...

Dave...

What makes an amp SSB only... It's all about heat (duty cycle) and ratings. You can use the SB-220 on other modes, just pay attention to the ratings as required. It is a linear mode amp that also does CW quite well... Oh yes, it does AM for those of you waiting to cough that up in the post.

Just derated as required.

I try to buy all the bargain "broken down piece of junk" SB-220 amps I can find if the price is right.

Engineering is the art of compromise.
You can only go where physics will let you. And those limitations are
constantly being stretched through research and development of new
technologies.

As shown by some of the very amp guys you claim can't be doing it.

>>They certainly produce some very compromised designs.<

>Based on what comparison?

Comparison to middle of the road ham equipment for 10 meters.
I never claimed "they" (whoever that is) "can't be doing it".
I did look at a couple of amps, and based on the pictures and claims given,
offered an evaluation.

You seem to be trying to spin that into something else.

What "research and development of new technologies" were shown in those
designs?
I saw sloppy construction, under-rated components, over-rated claims, and
from the look of the component layout, poor copies of motorola app notes.

>Based on what comparison?<

Comparison to middle of the road ham equipment for 10 meters. I never claimed "they" (whoever that is) "can't be doing it".

So? Who claimed you said otherwise?
And comparing cb to hammie radio has always been a hammie sore spot in here. Maybe you can enlighten as to why, since you appear a bit confused as to who said what.

>I did look at a couple of amps, and based on >the pictures and claims given, offered an >evaluation.
>You seem to be trying to spin that into >something else.

Try reading what's actually there instead of what's not. You offered an observation and I merely asked what you were comparing it to. You obviously felt threatened or insulted as if I were asking you to provide for such a claim when in fact, a personal observation is just that, nothing more. Try refocusing whatever it is that's unsettling to you.

Hi Roy,
I don't expect you to remember me but back in the mid to late 60's I qso'ed with you on channel 13 when you lived in Lawrence Harbor. I noticed your call in your post and looked it up in my log book that I kept all these years. I used my Mom's call (KQD-7815) and was very active on the citizens band. I was also a patron of Mark Radio and like you I have some very fond memories of George. When did he pass on? I also worked you in your mobile and we exchanged qsl cards which I still have around here somewhere. CB sure was fun back then.

Well I heard it, so choose one of three possibilities:

(a) they must be using separate 10 meter antennas now
(b) you are wrong, their CB antennas do fine on 10
(c) they operate with high swr on 10 and don't care

Re: Previous posts about Amateurs (Hams) using large amplifiers.

Just so we have a few things straight.... yes, there are Amateurs who run amplifiers in excess of the legal limit. But credit where its due, it hasn't been a large problem for the most part. There are also CB'ers running large amplifiers, some not so signal clean... these are the folks who tend to attract attention.

Many of the hams I know with large amps, don't like to run them unless there is a reason. The most popular reason I can think of is taking out the jammers and music players often found on the hf bands. The authorized limit may be exceeded for a time, but the amps are often throttled back when the vermin go away.
If you have spent any time on some of the lower bands, you know there are a number of whacko's with a lot of free time on their hands. Where possible, they like to try interfere with high profile conversations.

At times, you get the DX nut who wants to be the big gun... Until recent years, you haven't seen as many "lock to talk" types using large amps. But DX type people do tend to have the majority of large amps.

People tell me there are starting to be more and more "superbowls" on some bands with the folks using call signs. These are the large amp types that tend to abuse large power and their jamming is most often found in FCC enforcement announcements. The "whacked in the head" and "alpha hotel" peacock types give everyone a really bad name... some just happen to be using large amps. Most of the time, the FCC is very slow to react.

Pick a number you like, call that "many"... it is not "most Amateurs." Nit pick the details if you really have nothing better to do. It's time to move on to other fun in the sun.

The majority of hams just don't have experience using large amplifiers, they are not overly popular for typical operation. So why would one solicit a group of people who have so little hands-on amplifier experience for their opinions. It's probably a boobner thing to try and save face...

I did like the 1000hp racing motor comparison... here I am so out of touch with my old "small block" days. But the same general rules apply. There will be both good and bad people with really large motors. The bad ones have cell phones in the ear as they swerve across the freeway at 70 plus mph.

My $%*&# news server trashed a lot of the previous posts in its periodic flush, so I missed some of your reply posts. Add them on here or repost them new and we'll have some fun going through them as the time allows.

Absolutely. "Bad hams" who make a hobby out of generating malicious
interference, operating out of band, and flaunting FCC rules are
committing federal crimes and should be prosecuted.

Any other questions?

Here's where we disagree. There is no legitimate reason to break FCC amateur (or CB) power rules, period. If there were, the FCC would have written in a clause that stated power in excess of the limit may be used "if you feel there is a reason", LOL.

Just because someone is interfering with you that is not a good reason, skipp. QRM is a fact of life, and unfortunately on some frequencies (where conflcts are encouraged) there is sometimes jamming.

Don't most hams QSY or ignore the jammer? Why must you retaliate by "being louder"? That is an infantile reaction and only encourages more jamming. So you with your RF power retaliation now become part of the problem and encourage more jamming.

>The authorized

Sorry your server trashed some posts. I guess you probably missed this
one.

From: Skip May (mays@indigo)
Subject: FS: Serious HF Amplifier, for Serious Buyer Only, please.
Newsgroups: rec.radio.swap
Date: 1996/08/20

Hello there,
Please respond to me by email first if your seriously interested. This
amplifier is in California (A real California Kilowatt). No trades and
no
flakes please. I can arrange delivery to most anywhere if your willing
to
pay the costs.

The Amplifier for sale is an 8169/4CX3000A linear amplifier.

It makes about 8k and it drives with 150W. It goes 1.8 to 30
mhz, has full breakin, and is self contained.

It requires a 50a minimum 240v dryer outlet. The ps does about 8100v
max on standby on the high tap.

I also have a new Bird 10kW watercooled termination that hooks up
to a lawn sprinkler set for >6gpm.

Thank You

Skip May WV6F

Hi Jamey, My name is Woody Parr and I'm up the road in Cornelia. I'm
afraid that I'm indirectly responsible for this troll who is
badmouthing you at alt.religion.urantiabook. You see he was only there
in the first place to attack me.

This idiot is Steven J. Rogovich, 1612 Lake Christopher dr. Virginia
Beach, Va. 23464 He followed me to the UB usenet page from
alt.radio.pirate He and I (were) both formerly loosely associated
with each other in the shortwave pirate radio listening hobby. I USED
to be a shortwave pirate but my station has been permanently retired
for more than 2 years now. Stevie is still a pirate and is the
operator of the station Radio Free Speech. He is also the moderator of
a message board at the Free Radio Network < www.frn.net > and goes by
the handle of Pat Murphy there. I had a falling out with the people at
the FRN a couple of years ago as they became corrupt and were doing so
inappropriate things. I dared to open my mouth and openly complain
about there stupid activities which since they havn't yet ceased to

follow me around the internet anywhere they can and attack me.

Steve is also on the usenet trolling people under the name of Richard Cranium (richardcranus@yahoo.com) He's far too much of a coward to debate anyone using his real name.

> I do not belive you.

If you are a driver, surely you see the "export" radios in the Flying J and Pilot Travel Centers' CB display cases. Those are the ones that usually have the "band" switch A thru F (or so). Guess where those "extree channels" go. Band F goes UP into the ham bands (10 Meter). I can sit here in my house about 3-4 miles from I-85 and listen to truckers "tan-fer-in'" away on 28.085. It was just in late August that I was notified that the driver for Cheetah Transportation was FIRED for operating on 28.085 by Riley H. I posted the info and got laughed outta town, so to speak. Shore 'nuff, about a week after I posted it, it appeared on the Rain Report and on ARRL's website. It IS
happening, and there are actions being proposed to deal with it. One development was that an Oregon Congressman, also a ham and a current sponsor of the bill to abate Amateur antenna restrictions, was appointed to the House Committee on Communications recently. This is one of the responses by Mr Tauzin (I believe) to the many letters that have been sent to him and other Representatives by ARRL and individual hams who are pissed over the 10 Meter intrusion thing. To those who have a vested interest in NOT having their activities noticed, the first line of defense
would be to attempt to diminish the importance of such intrusions. Truckers/CBers will readily say
(and I have read it on websites) "I don't see what harm we are doing by talkin' on one 'channel' when them hams have lotsa other 'channels' to talk on", or "Why cain't them hams 'share' a little bit
cuz we ain't a-hurtin' anythin'". Even if that were a viable thing, the issue is (one of them), where would such intrusions ever end? If it were possible to "share" 10 Meters, then it would be OK to
"share" 155 MHZ with the local Rescue Squad.. The truth is, that is what the rules are for; to create "fences" and guidelines for the effective use and minimum interference needed of and for
radio spectrum. It can't be allowed to keep on.

All you have to do is listen to 10 Meters on or near an
interstate--particularly 28.085. It IS going on.

Hi Roy,
I don't expect you to remember me but back in the mid to late 60's I qso'ed with you on channel 13 when you lived in Lawrence Harbor. I noticed your call in your post and looked it up in my log book that I kept all these years. I used my Mom's call (KQD-7815) and was very active on the citizens band. I was also a patron of Mark Radio and like you I have some very fond memories of George. When did he pass on? I also worked you in your mobile and we exchanged qsl cards which I still have around here somewhere. CB sure was fun back then.

Twist, today digital images are inadmissable in court as they can be tampered with. You need film. And that doesn't help with the audio. The folks that get caught are the type who want to say 'you can't get me, ha ha' and persist. Once the FCC gets dozens of complaints in the same general area, then they send someone in. If their people catch it, then there is trouble. Otherwise, as you state, you can't prove it in court.

Yep, and that's why at least one ham got temporarily 'popped'. After everything was gone over, he got his HT back, but only after a shop put it back into unmodified form. The question was why have the modded rig in the first place? Fact is, you can use legal channels/modes for your emergency.

Several reasons:

-You may not have noticed, but there's an ongoing discussion regarding whether or not 10 meter intruders exist, and if they are a problem or not. I don't see any advantages to sweeping this topic under the rug simply because some people may respond to it by flaming. It's a legitimate rrcb topic, and there's no valid reason to avoid it.

-Legit CB'ers need to be aware that certain of their bretheren are drawing negative attention to all CB'ers. Maybe someone knows someone who operates illegally on 10 meters and thinks no one cares about it. The info they read here in the NG could change their mind.

-The 10 meter intruder problem has the potential to bring down the entire "outlaw CB" house of cards, e.g. freebanding, amps, etc. Therefore it is in the best interests of the entire CB population, legal and illegal, to discourage 10 meter operation.

-Some CB'ers are not even aware that 10 meters is a ham band and unlicensed operation there is illegal. Seeing the discussion about the 10 meter situation and the opinions expressed in it helps educate them and perhaps persuade them not to operate on 10 meters.

I have told you my reasons to post the information I posted. Maybe you can tell me your reasons why you think such info should be kept off this NG.

The FCC very clearly spells out, Any freq, any power, any mode, in an
emergency.
If the guy you referring to was in Socal, his problem was with the sherrif's
department, not the FCC.

But this of course does not apply to day to day ops.

Hello all, another newbie question for you...

I'm picking up a basic Uniden CB tomorrow, and pairing it with a 4' FirestikII. This antenna has an adjustable tip and I have read the basics about SWR. Is it possible, without an SWR meter of my own to make these adjustments (with this very basic Uniden) on my own? No, huh?

What can I do? Is anyone available to help me in the NW Chicago suburbs?

> on their dime.

I never went in for the free-calls thing... mostly I'd just butt in on
the call and tell the person what a piece of junk their phone was,
etc., and they'd usually gasp or get pissed off. The drunk/stoned
callers were best, because I could mess with their minds... and the
gay guys were always a riot because they'd squeal out loud and
generally lose it when something went wrong with their phone. I *did*
catch a few people in the act of dialing... in those cases, I keyed
down & pushed some buttons on the mike, making them dial wrong
numbers.

Caught a local pizza-delivery joint making the mistake of using 49mhz
cordless... girl asks customer what toppings he wants on his pizza, I
cut in and said "all the sh**"... girl says "EXCUSE ME???"

Even confused the hell out of 2 boys down the block who were playing
with their GI Joe walkie-talkies... they weren't expecting a
wisecracking 3rd person. Ah, those were the days... then everything
went over to 900mhz and 2.4 gig...

Guy

SWR meters are cheap and easy to get.
Without one, with that type of antenna, you're just guessing.
You should be fairly close if you set the adjustable tip about midway.

I do... the 2m lids are none too happy about it whenever I QSY to
6m. Then they pout "dude, I don't have 6...(thank God)"

If the 435ers ever tried their usual routine on 6m, they'd be talking
to no one but empty freqs in a second, LOL!

Interference can be a source of real despair---and most CB finals are
very poorly filtered. Would it be possible to talk this dude into
getting his ham ticket, and getting on 440mhz?

I have my own interference problems... when I'm trying to work 33cm
and a nearby neighbor gets on a cellphone, the zinging and booping
noises in my rig completely steamroll my QSO.

"Aaron H. Voobner",
Sure, why not. I think a constant 'harping' about
the 10 meter 'intruders' here does absolutely no good.
It isn't like they will suddenly develop a conscience,
or that anyone here can do anything about it.
I don't think there's any question about there being
intruders. Those who don't think there is just haven't
been listening. No one is making it up. As to whether
it's illegal or not, or 'right' or not, is begging the
question. I also think that 'legit' CB'ers knowing about
these intrusions is useless, there really isn't any 'peer-
pressure' that they could, or would, bring to bare on the
intruders. What other options do they have, other than
'peer pressure'? If you're going to complain, at least
complain where it will do some good, that makes much more
sense to me. Complaining here just makes you a 'pest', with
both the 'legit' and otherwise users, and wastes bandwidth.

Hmm... if "Einstein" turns out to be drunk & disorderly, however, Dan should have no problem getting the local police to nail the dude. I think I have even heard Einstein or someone like him, all the way in L.A., getting on that Mexican dude's case on 27.035 when I was SWLing 3 weeks back. His voice sounded eerily like a local 435er named Scott.

But, as ex-WB6JAC has repeatedly demonstrated, jail guards can be bribed with cartons of cigarettes in exchange for radios... so having Einstein hauled away to the Crossbar Hotel should only be considered a Band-aid solution at best.

Only one I know of is Signal Electronics, cattycorner from Del Amo
Fashion Center in Torrance... this is the only local place which still
stocks the Cobra 148's. Expensive place, but they sure have a lot of
handy interconnects.

Inglewood Electronics used to be along Century Blvd near the 405, but
supposedly they've been out of business over 10 years.

If you have so much experience picking up legal amps for services
between 25 and 34 MHz, why can't you even provide one reference --
website, manufacturer & model, or even an FCC reg -- that supports
your claim? You see, I can't find one single amp currently being
manufactured that's legal on 25 to 34 MHz in the US, so you are going
to have to come up with some proof, Skippy.

Ok then, regardless of it's "classic" definition, in what make/model
TV did it serve as a sweep/horizontal-deflection-output/amplifier
tube? Hell, let's forget all the semantics: What TV EVER used the 6146
for ANY circuit?

>the 2057 as two examples. Yaesu also has some whacky part number for an
>RF Spec'd sweep tube they put in a radio... from memory, the FT-101 series
>I believe...

If I remember correctly, the 8950 was a half-assed attempt by GE to
meet the demand for a cheap RF amp tube with greater linearity than a
sweep tube, and could also be used as a replacement in existing sweep
tube amps. I don't think it was ever used as a horizontal deflection
amplifier, probably because that's not what it was designed to do. In
other words, the 8950 isn't a sweep tube. I believe the M2057 was
designed along the same train of thought. But because they were
basically modified sweep tubes they still didn't have the 'stoutness'
of tubes designed specifically for RF power.

>With a bit of good circuit design, sweep tubes can be made to operate in
>linear modes with good results.

...marginal results. The need for hi-Q tanks, grid tuning, and heavy
neutralization attest to that fact. The circuit as a whole may end up
mostly linear, but it takes quite a bit of finagling to get a sweep
tube to run linear at RF freqs.

> At one time, they were plenty cheap,
>which made them a viable option.

For amateur use only. Sweep tubes weren't used in any commercial
equipment, which is another testament to the lack of suitability of
sweep tubes for RF applications.

>The three Swan & Siltronix amplifiers I have using sweep tubes, do not
>have neutralization, nor does it have tuned grid(s) input. Grounded
>grid operation does not require neutralization in many of the classic

>designs. That's one issue which help make them so popular...

Grounded-grid operation or not, those amps have pentodes wired as triodes because the tubes are not linear otherwise, which is nothing but a kludge in order to use cheap tubes in place of a 'real' RF power tube.

And again the results are marginal, since the power dissipation of a pentode is reduced when it is wired as a triode, mainly to limit the dissipation from the screen grid. The result is that an 8950 is only good for maybe 70 watts on AM with 20 watts of drive (Class B), which is terrible considering a 6146 will do about the same output in AB1 (no drive power). And an 812A will do more than twice that with plenty of headroom -- grounded-grid!

As I said before, and will continue to say, the sweep tubes were used because they were cheap, and that's all.

>Your theory and experience shows to be a little thin on the topic...

Oh really? What TV used the 6146 OR the 8950 for ANY circuit?

>Pi output circuits are pretty much the industry standard for similar
>circuits unless you know of something that works better..?

Granted.

>Most of the classic consumer amplifier circuits used sweep tubes in low mu
>operation. I would not label that a generic triode operation.

What else would you call it?

> "Grounded
>grid" or "super cathode driven" circuits were the layouts of choice.

Grounded-grid is common for power triodes, not for power tetrodes or pentodes. Regardless, the radios still used the sweep tubes in common-cathode fashion, complete with tuned grids and heavy neutralization, and then they were run at very conservatively even in SSB: Swan's version of AM is SSB + carrier, or one sideband less than A3. Even with that advantage, a pair of 6HF5's are only good for 125 watts! If that doesn't give clue you into the poor RF characteristics of sweep tubes then nothing will.

>: Sweep tubes were used in RF amps not because of their suitability, but
>: because they were cheap. That's all.
>
>They were practical, cheap and suitable.... Mfgrs like Swan, Ameritron,
>Amp Supply, Dentron, Galaxy, Palomar, Pal, SBE, Tempo and others thought

More like 'barely' suitable. Sweep tubes were suitable for the amateur on a budget, which was quite chunk of the market (and still is).

>:>Now go whine about how dumb you look to everyone on the news group.

>just having fun...
>skipp

Why narrow it down? It all started with two simple questions: What TV used the 6146, and what amps currently being manufactured are legal for use in the US on 25 to 34 MHz. You can answer the questions or you can continue ducking them by trying to "edit this down". Still having fun?

>But not all, nor is all three grids grounded "triode operation" the best
>circuit.

I didn't say "all three grids grounded 'triode operation'". Triode operation is when the screen (and suppressor, if there is one) is tied to the plate. If you ground all three grids as you suggest, all you will do is melt your tube (if you don't nuke your power supply first). What I DID say was that the tubes were used as triodes instead of tetrodes or pentodes because of the linearity gained from operating them as triodes. And using triodes in a grounded-grid configuration is not suprising when the circuit requires linearity.

But this is just another testament to the reason why sweep tubes were used instead of RF triodes like the 812A -- the sweep tubes were cheap. That's all.

>Triode operation is not a good label... most rf people like descriptions
>like low-mu. But you knew that and were just going to point that out in
>your next post... :-)

No, I wasn't. Unlike pentodes and tetrodes that are rated by the transconductance, triodes are rated by their mu (amplification factor). They can be low-mu (such as the very early triodes, power triodes, etc), medium-mu (such as the popular 6SL7 and 6C5), or high-mu (such as the 12AX7). Whatever the mu, it's still a triode; it still has IpEp curves that sweep up from zero instead of flat-topping like a tetrode or pentode, it still has the equivalent of three functional elements (tri- = 3, triode, get it?) and it is still more linear than a tetrode or pentode. "Triode operation" is the best label, and that's the label that's been used in tube datasheets, textbooks and manuals since they were first published.

>In high drive operation, unsafe values of G1 current are
>possible. There are much better circuit layouts... the circuit of the

>six tube Palomar 300 as an example.

>
>You are wrong again...

Keep dreaming, Skippy. I just grabbed the first TV schematic I could
lay my hands on. From the "Electronic Technician Circuit Digest"
number 638: Gamble-Skogmo models 9590A, 9591A and 9592A: V-10, the
tube designated as the "Horizontal output", is a 12DQ6-B, which is
preceded by V-9B, half of a 6CG7 which is used as the "Horizontal
oscillator". Hey Skippy, isn't the 12DQ6 a sweep tube? I hope so,
because the Truetone model 2D3246 on the next page uses the 6DQ6A
(VT-12) as a "Horizontal sweep amplifier".

What's really cool about this particular volume is that it includes
the Pearce-Simpson model CBD-5. Now that's one very nice-looking old
rig! Uses a 6AQ5 for the final. ...hmmm, hey Skippy, since the 6AQ5 a
beam pentode, does that mean it's a sweep tube? LOL!

>So this does what for you here..? My RCA tube manuals use both.

Well, gee, maybe because the terms are synonymous... horizontal
output... horizontal sweep amplifier... horizontal oscillator
amplifier... duh!

>Doesn't add anything to your previous diatribes.

Doesn't it? I think it does.

>: So now, what television used the 6146 for the "horizontal oscillator
>: amplifier"?

Dave Hall,

Yes I did give some extreme examples, but they are true. I'm in no way implying those scenarios are *likely* to happen.

I do agree that it would be extreme and unfair if a person were removed from the ISP for voicing an opinion. I'm sure there are exceptions when it would be a good thing. But who could you trust to make that call?!? Catch 22

The problem with hate groups ect is they are protected from the government yes, but the entities hosting them may choose to axe them. It is the private property owners that have a right to censor you, not the Government. That is what I mean when I say you can be censored. The Government doesn't have the power, the property owners does. That's what I mean about freedom of speech not applying to the Internet. You're free to say, but the property owner can censor you anytime it pleases.

It does seem odd that some of the most objectionable material is protected and the most basic and harmless can be stepped all over. Who makes the call? Can we trust them?!?

Here's a thought about free speech. What is it again? Is this close?
"Freedom of Speech is not the freedom for the speech you love, but freedom for the speech you hate."

I like this though too:
"...
To Summarize:
It is a well known fact that those people who most want to rule people are, ipso facto, those least suited to do it.

'To Summarize the Summery:
Anyone who is capable of getting themselves made President should on no account be aloud to do the job.
..."

That's an interesting one.
I guess you go to the user on that one, or maybe the cell company.
One of our local club members is a big uwave contester, he's never talked about this sort of stuff.
He's out in the sticks a bit though, so he might not encounter it so often.

What freqs?
We can listen around and see if it's a generic problem, or maybe your neighbor has a wonky phone. Might be useful to know brand and model on the phone too.

> No 'splainin' necessary. You don't think they have local dial-up
> numbers outside Rochester?

Sure they do. But for you to have a reverse DNS of xxxxx.roc-pt.ny.localnet.com you aren't THAT far from Rochester. You said that you were no where near Rochester, and I say based on your reverse DNS you're not that far.

Here: My IP address (when I'm at home) always reverse resolves to <whatever>.turlock.charter.ca.com. Now, I don't live in Turlock but I'm not THAT far from it, either. In fact, Charter customers within a 30 mile radius (give or take) have the same suffix on their reverse DNS. It obviously doesn't pin-point them to Turlock, but it gives one a general idea.

Now keep in mind that I did say I really didn't care where you lived. I meant it. All I was trying to do was explain to you why people think you live in or near Rochester. I wasn't trying to attack you in any way. I'm still not trying to attack you. You've never said anything bad towards me before. I guess I didn't make the point of my post very clear. The "You've got alot of 'splainin' to do was my silly way of saying "If you want people to beleive that you live elsewhere, you gotta give them a reason to believe it". If you don't, then they will continue believing you live in or around Rochester. Maybe you want them to think that, I don't know.

> You and Georgie-girl have a lotta lurnin'
> to due.

Hey, I don't have anything to do with George. I've never even so much as emailed him. We haven't joined forces or anything, if that's what you meant by that. As far as my learning is concerned, I'm a pretty successful network engineer, which is why I felt confident (and still feel confident) saying what I said.

> You were much better off not taking sides, Alan;

I haven't taken sides. Really. I was just trying to help you understand why people assume you live in/near Rochester.

I'm in here to learn more about one of my favorite hobbies, and pass along information when I can. I'm not here to pick fights.

> you had people fooled into thinking you were intelligent. Georgie-girl
> and Aanal Aaron will warp your perspective quickly, and they got no
> sense.

I don't think it's possible for an imbecile to fool anybody into thinking he's intelligent. You either are or you aren't, and your written thoughts are a great indicator. Shoot, the ability to fool smart people into thinking your smart is pretty smart, isn't it? :)

Actually, the fact that you found my previous posts to be intelligent is a welcome compliment and I thank you for it. There's no reason to change your mind is there?

> Why do you think Aanal Aaron has had to change his email address so
> often recently?

You know, I honestly don't know. As far as I've seen, he's never posted anything on Usenet worthy of losing an account over. Like him or hate him, the guy is just posting his unpoular views, as near as I can tell. He choses to keep his comments confined to legal vs illegal issues. Fine. That's hardly a reason to lose an account. In fact, if he has a problem losing accounts over what I consider VERY trivial matters, then I will gladly offer him an account on my mail server. Stupid complaints will go straight to /dev/null. In fact, if you had a problem with losing accounts because somebody didn't like your point of view, then I would even extend the offer to you.

There. Does that settle it?

Besides the nuisance when living next to one of these CB'ers running an illegal amplifiers, there is a direct price on ham radio. Most in the country do not know the difference between ham radio and CB. All they know is that neighbors with antennas often interfere with their phones and televisions. As a result, these CB'ers give the reputation of ham radio a black eye also. There are two ways to respond to that - educate the neighbors and support any efforts to reel in the "outlaw" CB'ers.

I don't know the particulars, but certain members of this newsgroup have
been claiming some sort of victory, surrounding the revokation of ISP
privileges, for alledgedly violating TOS agreements, against certain
other members of this group, who's only "crime" has been to side with
the rule of law, and to remind those who have a problem with it, just
how wrong they are. To me, that is nothing more than a difference of
opinion. Not something that should be TOS actionable.

And like I pointed out before, those who complain the most about TOS
violations, are the first to break federal communications laws. Talk
about hypocricy!

I ran into similar issues when I ran both a dial-up and packet radio BBSes about 12 years ago, before the internet really "caught on" with the general public. There were always little squabbles about content of traffic, and who would forward what, and who had the right to determine what was "acceptable". Someone is always electing themselves Pope, and the only way to deal with that was to cut them off at the knees and forward around them. These almost constant political issues are what finally caused me to throw in the towel for packet radio. It wasn't fun anymore.

Many people adopted the mindset that "it's my equipment, and I'll censor what I want". This may have been their right, but it wasn't in the spirit of ham radio, or in the spirit of communications, and serving the general interests of other hams.

On the dial-up BBS, there sprang up some personality clashes between a few of the users. One guy kept Emailing me and begging for me to remove another user. In spirit, I sympathized with this user, but in order to remain neutral and objective, I couldn't take sides, as the other party had done nothing but disagree and taunt the 1st guy, much like our own twisty does here. If Twisty was on my BBS, I wouldn't delete him either. As crazy as he comes off, he's still entitled to his opinion.

> It does seem odd that some of the most objectionable material is protected
> and the most basic and harmless can be stepped all over. Who makes the call?
> Can we trust them?!?

That's why we make rules. But many here believe that rules are made to
be broken. If you know what you will be up against, up front, you can't
say you weren't warned when you step over the line.

>
> Here's a thought about free speech. What is it again? Is this close?

Well that's usually the case because no one thinks about freedom of
speech, until either someone tries to stop them, or they hear something
that they find offensive. We take freedom of speech for granted most of
the time. It's only when we take issue with something, does it register.

> I like this thought too:

That's probably the best position to take, as it saves you from
frustration. I feel the same way about some of the people as well.

>
> You know it is in the RRCB charter that "Posters must at all times respond
> to replies as if they had been accused of high treason"
> Would explain allot of the explaining going on in this NG.

A common debate tactic used by people who are defending a weak or
illegal position. Usually they attempt to change the subject or redirect
with the intended result of putting their opposition on the defensive,
thereby taking attention away from the original subject. The other party
then spends time defending a sometimes irrelevant position, rather than
concentrating on the subject at hand.

Also known as: "When logic fails, demonize the opposition".

Ummm, he was asking a hypothetical question. You, as usual, have no
answers. The freeband is obviously legal for use whereever the FCC
(and other similar agencies) doesn't (don't) have jurisdiction, such
as international waters. No jurisdiction, no laws. Try thinking for a
change, Aanal Aaron, instead of just blathering like an idiot.

Using your own analogy, Police Departments traditionally operate in
such a manner that anything that is NOT specifically illegal is OK for
them to do. So your rhetirocal question is answered: Yes, it would be
"legal".

> Enough rumor and heresay. Can you show us the actual CB/"freeband"

Twist, today digital images are inadmissable in court as they can be tampered with. You need film. And that doesn't help with the audio. The folks that get caught are the type who want to say 'you can't get me, ha ha' and persist. Once the FCC gets dozens of complaints in the same general area, then they send someone in. If their people catch it, then there is trouble. Otherwise, as you state, you can't prove it in court.
73 from Rochester, NY
Jim
ps - do you think these inane arguments will calm down in, say, 10 years; or will the same trolls keep going on and on?
--
100% agree.
The trolls willl have another subject to cry and whine about when this cycle slips into oblivion.
The arguments aren't even the point,,,hell, everyne knows they have no valid arguments at all concerning anything. There will always be people unhappy with themselves and whom can only be made to feel better by attacking others, no matter the subject.
I do get a kick out of the shill posts, though. Like someone that talks to themself.....<g>!

Anyone with at least half a brain (guess that leaves twistieboy
out) and a decent receiver (that leaves dickieboy out)can hear
these U.S. English speaking truckers on 10 meters.

I'm a ham, and I am not bothered by the some truckers talking on 10
meters. Just thought someone should let folks know that ALL hams do not
have the constapation problems that a few hams here do. No, I will not
post my call sign here. If the call sign hunters are bothered by that,
GOOD!
--

I'm not bothered by truckers on 10 meter either.....they usually do
not exist. All hams DON'T have constipation problems...it seems confined
to the lifer-techs and a few lonely upperclassmen that encourage such
juvenile fodder.

"Aaron H. Voobner",
Sure, why not. I think a constant
'harping' about the 10 meter 'intruders' here does absolutely no good.
It isn't like they will suddenly develop a conscience, or that anyone
here can do anything about it.
I don't think there's any question about
there being intruders. Those who don't think there is just haven't been
listening. No one is making it up. As to whether it's illegal or not, or
'right' or not, is begging the question. I also think that 'legit'
CB'ers knowing about these intrusions is useless, there really isn't any
'peer- pressure' that they could, or would, bring to bare on the
intruders. What other options do they have, other than 'peer pressure'?
If you're going to complain, at least complain where it will do some
good, that makes much more sense to me. Complaining here just makes you
a 'pest', with both the 'legit' and otherwise users, and wastes
bandwidth.
'Doc
--

I happen to agree with Paul on most points except the "no one doubts
they exist" part.
Only one party other than the usual troll brigade has admitted to
hearing such banter and only one time in several years. Hardly a problem
and barely worthy of cbers ears.....as noted, it is usually the
espanol-speaking drivers or those that haven't a clue or care where they
are.
His points would be much better focused in a driver's forum. At least
JerryO had the balls to go to such a forum and voice his opinion and
yea, he took a buncha guff, but he stands by what he says with no
pretenses concerning who he is, which has always given "aaron" sticky
palms.
"Aaron" has his plate way more than full right here, no way could he not
avoid the "shrinkage factor" if he were to take such an imagined
"problem" head on.

twistedhed@webtv.net (Twistedhed) wrote in message
news:<7725-3DB40175-738@storefull-2311.public.lawson.webtv.net>...
Some of the first analog phones were filled with those succeptible
interference bugs. At one time, anyone could go to K-Mart or wherever
and buy the cheapest/best selling cordless phone and drive around the
well-manicured neighborhoods until you heard a dial tone on YOUR
handset. Technically and in strict violation of the law, one could park
in front of another's house with the same type phone (or not) and talk
on their dime.

--

>I never went in for the free-calls thing... mostly >I'd just butt in on
the call and tell the person >what a piece of junk their phone was,
etc., and >they'd usually gasp or get pissed off.

"Bring me a bottle" coming from a baby monitor in a child-like voice has
brought a chuckle or 2 over the years to some as well.

>The drunk/stoned callers were best, because I >could mess with their
minds... and the gay >guys were always a riot because they'd squeal >out
loud and generally lose it when something >went wrong with their phone.

Aw, man, that's rough.....but I can see that happening...used to witness
a similar reaction from one dude (?) repeatedly. We lived in SF at one
time and parking was at a premium. Placing an object (like orange cones)
in front of the house in the street would usually assure your spot, but
once you came home and a person of, ..uh..a.VERY different sexual
persuasion would witness one moving the cones and parking their car
where the cones used to be,,,,,a pretty funny song and dance could
occur.

>I *did* catch a few people in the act of >dialing... in those cases, I
keyed down & >pushed some buttons on the mike, making >them dial wrong
numbers.

Have you ever held the dial tone or not let them hang up?

>Caught a local pizza-delivery joint making the >mistake of using 49mhz
cordless...

Terrible ain't it? The new 5.4 phones are even worse.....total junk and
not surprisingly..the 49mhz (depending on quality and manufacturer of
phone) works better as a cordless than the new 5.4s.

>girl asks customer what toppings he wants on >his pizza, I cut in and said "all the sh**"... girl >says "EXCUSE ME???"

Hahhahaha!

>Even confused the hell out of 2 boys down the >block who were playing with their GI Joe >walkie-talkies... they weren't expecting a >wisecracking 3rd person. Ah, those were the >days... then everything went over to 900mhz >and 2.4 gig...

Dave, these are undeniably Johnsons, being identical to the Johnson of the same model #:

4120..... Sams #194
4145..... Sams #195
4175..... Sams #196
4230..... Sams #214

I also once saw a GM123A in Canada that was a Johnson 123A clone.

I was absolutely mistaken on the Browning issue, I wrote "Browning" while intending to write "Pearce-Simpson". I have a GM 23B base with the P-S "Receive-O-Slide" delta tune and a matching GM 23 mobile.

2330. Re: Maybe We'll Get The Real Facts, not from Boobner fake name...

Newsgroup: rec.radio.cb
Date: 2002-10-22 16:39:07 UTC
From: Yeti we keep going on and on <coldbeerisbetter@hotmail.com>
Message-ID: <ap3uvbpqr2@woodrow.ucdavis.edu>
Source record: 141107

: yeti@cet.com <yeti@removecet.com> wrote:
: I didn't say "all three grids grounded 'triode operation'". Triode
: operation is when the screen (and suppressor, if there is one) is tied
: to the plate. If you ground all three grids as you suggest, all you
: will do is melt your tube (if you don't nuke your power supply first).

Well, its clear to me that you've you've been hanging around the tube audio amp crowd... the description is reasonable in the tube audio amp context, but not applied to real world rf amplifers. The actual topic we should be on...

It would take a bit of time to go through the above when applied to rf amps... so let me defer the question back to you with show me an actual rf amplifier circuit using triode mode operation as you describe above. I belive you will be hard pressed to do said.

Your previous web url points to a swan web page, just amp pictures are shown, no circuit diagrams to go through... In your next post, how about you reference an actual known circuit to support your text.

: What I DID say was that the tubes were used as triodes instead of
: tetrodes or pentodes because of the linearity gained from operating
: them as triodes. And using triodes in a grounded-grid configuration is
: not suprising when the circuit requires linearity.

Not really the reason for using them in rf applications as triodes. AB2 operation is possible using certain tetrodes and pentodes... and the extra dc (bias, screen) supplies go away. A major trade of linearity for gain uses a larger scope of factors. Get away from the tube audio stuff and come back to the rf world... One does not need "high fidelity rf operation" when you have proper tank Q. A large gain linearity trade is just not realistic as you describe it. I see a lot of triode operated rf circuits, just not using triode mode linearity as the major reason for doing said... once you have the required min linearity in a good circuit... for the required mode, you have arrived.

: But this is just another testament to the reason why sweep tubes were
: used instead of RF triodes like the 812A -- the sweep tubes were
: cheap. That's all.

Classic sweep tubes were easily made to work in Linear Mode RF Amplifiers, cost was a major reason for using them, but not the only one.

: No, I wasn't. Unlike pentodes and tetrodes that are rated by the
: transconductance, triodes are rated by their mu (amplification
: factor). They can be low-mu (such as the very early triodes, power
: triodes, etc), medium-mu (such as the popular 6SL7 and 6C5), or

: high-mu (such as the 12AX7). Whatever the mu, it's still a triode; it
: still has IpEp curves that sweep up from zero instead of flat-topping
: like a tetrode or pentode, it still has the equivalent of three
: functional elements (tri- = 3, triode, get it?) and it is still more
: linear than a tetrode or pentode. "Triode operation" is the best
: label, and that's the label that's been used in tube datasheets,
: textbooks and manuals since they were first published.

The object of rf amplifiers is hopefully some power (stage) gain. One uses the most practical circuit and device to obtain said. People use triode operation as you described above in audio circuits, rare if ever have I seen it in RF circuits. Beam Power and or sweep tubes have proven to provide practical a cost effective part for Linear RF amplifiers. Their operational linearity in a well done circuit meets or exceeds the FCC requirements.

: You can smoke your grid in any power amplifier configuration. What's
: your point?

There are circuit layouts which are bad news for rf amplifiers using certain tube geometries. One must be aware of such potential problems to avoid problems. The grid to plate conneciton scheme you mention is not a very good option for rf amps. In my Marshall guitar amp yes... in my Sweep Tube RF Amplifier no. (insert big G chord here...)

I can't believe it. Most nights, I tune in for the first five minutes,
to see who is on. Usually, I am disappointed and it is the usual saucers
and stuff that is on most of the time. I didn't bother last night, and it
turns out to be someone different from the usual topics, and someone I
would have listened to at least for a while.

It seems a shame, because it is neat that there's an overnight show
that is different from the usual talk show circuit. But too often
the show is about the esoteric, rather than the intriguing.

By the way, according to a bulletin I saw the other day, Kevin Mitnick
is selling off some of his computers, if I remember properly to pay
his legal fees. Perhaps the timing of his appearance lastnight is
connected with that.

All I can vouch for is that which applies to me. I've been a ham for over
15 years and the most power I ever used was 650-700 watts. That was for a
short time only and for experimentation.
I found that such power was not really needed and, after my old wagon died,
the amp went onto
a shelf in the furnace room where it remains today. The simple truth is,
such power is NOT needed and is mostly a waste of time and money. On the
ham bands, there is still plenty of room to find a
place to talk without being QRMed or annoyed, and most of the time, people
are courteous enough
to stand by until you are done. Many times a DX station will call for any
mobiles to work him be-
cause he knows the mobile is at at disadvantage in a pileup. If I *DO* run
into a power idiot, I just
move on; it isn't that important to me to be the biggest and baddest on the
air. I spend more time
making projects and trying them out (mostly antennas) than I do talking. It
allows me to combine
two hobbies; wood and plastics working with radio, and I spend much time out
in my shop putter-
ing about trying new things I found in the ham mags or building something
for my ham station. It is
the L E A R N I N G that piques my interest--not blabbering away about
nothing or trying to be
Big Bad LeRoy Brown, Baddest Man in the Whole Downtown. I know that is hard
for some to believe since the emphasis in CB and Ham is

just---well------different. At least, it is for me. I don't CARE if somebody can override me with their stupid "pills", or their "swang". It just don't
matter. What matters is that thru my interest in Amateur Radio, if something goes POOF! I can
usually fix it. Thru my interest in Amateur Radio, I learned much about what actually is involved in
getting a signal from the radio out into the air. I learned about impedances, matching, formulas-----
and that, I don't care WHO says so, coax length does NOT matter as long as you have an effective
nearby ground and the antenna is not depending on the feedline for counterpoise. Exception is phasing antennas where everything has to be in balance, and even then, it *may* not matter except
on non-metallic bodies like trucks.

Power? It is merely a placebo--a substitute for learning how to get a signal from point A to point B
in the most effective way. On CB, it is clear that some don't even CARE how their rig sounds just so it is LOUD. Most hams are trying to communicate and, while there are some that will go outside
the rules, they are the minority, and the majority are just talking with a few hundred watts or their
barefoot 100 watt rig. With my 706, I talk around the world without an amp and all over the USA on 75 meters. Amps are not needed for E F F E C T I V E communications except under the most
extreme conditions, and the only way I would use mine (even if it were in line) is in an emergency.

Now, now, TW, I went to Charlotte this morning to get tickets for President Bush's appearance
Thursday, and all the way over (about 25 miles for a 50 mile RT) and back, all I could hear was
truckers echo-ing and beeping--along with hams running high speed CW in an effort to run 'em
off. There are plenty of them on 10 if one takes the time to listen and lives near an Interstate like
I do. There are several Interstates around here; I-85, I-77, and I-40. Twenty eight Oh Eight Five
is the most popular one around here.

This sig file is a compliment to Hams. In fact What it is saying is that people who try to hold those with Ham licenses to some higher moral standard just because they have a ham license is is faulty logic. So what it means is anyone can get a ham license there are no prerequisites, even low class Cbers, If you are a ham you are also able to screw up since your just like anyone else.

<<snip>>
I happen to agree with Paul on most points except the "no one doubts
they exist" part.
Only one party other than the usual troll brigade has admitted to
hearing such banter and only one time in several years. Hardly a problem
and barely worthy of cbers ears.....as noted, it is usually the
espanol-speaking drivers or those that haven't a clue or care where they
are.
His points would be much better focused in a driver's forum. At least
JerryO had the balls to go to such a forum and voice his opinion and
yea, he took a buncha guff, but he stands by what he says with no
pretenses concerning who he is, which has always given "aaron" sticky
palms.
"Aaron" has his plate way more than full right here, no way could he not
avoid the "shrinkage factor" if he were to take such an imagined
"problem" head on.

Why, Thank you TW!

That's just me. If I think I am right about something, I will stand firm,
say what I think and let the
chips fall as it were. And, yes, I have been wrong before. This time, I am
right to defend that which I believe is "mine" because I have a ticket to
the party. It seems quite simple to me; if you
want to join the party (10 meters and all of ham radio), then obtain the
ticket and be welcomed
with open arms. Gate crashers are not welcomed at ANY party and usually get
thrown out when
detected. Same thing with truckers just taking over 10 or 12 meters and
filling those frequencies with their echos, "swang", and squeaks. They
don't belong there (without the license), and I will
do whatever I can as one individual to get rid of them. That includes
turning in ones I can prove are
operating there, running high-powered, fast CW right on top of their
signals, and writing letters to
whomever I can get to listen in Congress to get something done about it. We
now have a licensed
ham on the House Committee on Communications (Greg Walden of Oregon), and
when he is done
with the bill now moving thru on antenna exemptions for hams, I can see the
enforcement of the

CB rules (where it pertains to illegal radios in trucks and out of band ops) coming to the forefront.
Why? Because, even now, Mr Walden is receiving the first of letters (including mine) explaining
what is going on in the ham bands WRT renegade truckers/CBers and getting "bugs" dropped in
his ears as to what needs to be done to get those unlicensed ops out of there. He is receiving some
pretty darned good arguments from what I am told within the ham community. There has even been a recent discussion on www.qrz.com, I believe, about this very issue. While some hams don't
care (that's normal, you'll find people like that in any endeavor), there are enough people pissed off
about it that you can bet it will not be allowed to continue.

Just as those who didn't believe me about the Cheetah driver, there are those who are going to minimize the idea that anything can or will be done about it. The most likely scenario I am hearing
about right now is the re-visiting PL 106-521 (local enforcement) to add some provisions to allow
the inspections of radio equipment at weigh stations by state DOT officers. Truckers' Associations
lobbied hard against that in the original Bill, and got such inspections exempted. Now that the intru-
sions seem to be getting worse instead of better, you can be sure this will get looked at again. The
other thing is aggressive enforcement of bans on importation of certain so-called "10 Meter" radios
(you know the kind--the ones that have the readout for 10 Meters AND a "channel" display, AND
a "band" switch A thru F) Yeah, we know what they are really for (wink wink). I am only one man. I can only do so much which is restricted to the above. Yet I am not alone, either. It may take time, but it WILL happen. Those people that think they can operate anywhere they like with
impunity are dragging a rope behind them that will eventually run out of slack and hang them. Think
the Amateur bands are not "important", or do not warrant attention from the Feds? Those that believe that "we got us a war a-goin on and them thar Feds ain't got time to mess with CBers" are
just WRONG. The opposite is true! The bands have taken on MORE importance in light of the
things going on around us and will be protected. Why? If those that operate illegally on those bands do so freely, what's to stop them from taking another, and another, and another? THAT, my
friends is not gonna happen! The frequencies WILL be defended.

That is what i know, and I don't edit it. What those outlaws do on the 40 channels is their problem,
not mine. But when the bandits get in MY "yard", it's different.

73

:>These services are allowed moderate (higher than traditional exciter
:>level) power operation >50 watts. Such services exist and are allowed to
:>use amplifiers.

: Such services exist, but are NOT allowed to use amplifiers. 2.815 is
: very specific about that.

It's actually a very interesting debate. I've looked up current FCC Licenses for services in the 30 Mhz range... one I see has an allowed power of 100 watts plus. The actual question should be "how do legal services obtain full authorized power..?"

Might be interesting to phrase that question to the FCC and some amp mfgrs.

: If you have so much experience picking up legal amps for services
: between 25 and 34 MHz, why can't you even provide one reference --
: website, manufacturer & model, or even an FCC reg -- that supports
: your claim? You see, I can't find one single amp currently being
: manufactured that's legal on 25 to 34 MHz in the US, so you are going
: to have to come up with some proof,

The buzz word is "currently." I mentioned that the dealers in the radio mags, news groups and Ebay are a good source of legal amps. However, with proof of proper fcc license, Alpha Power provides the "unlock codes" to enable their amplifiers to transmit on 28 Mhz. They are FCC legal amplifiers as one actual example.

:>: BTW, what's the IB service?
:>
:>The "B" of IB means "business."

: IG is industrial/business, there is no IB listed.

:>:>The second question you asked..? It actually tells us how bad you want
:>:>to show your ignorance.
:>:>
:>:>No television I've heard of uses the 6146 tube as a sweep tube. There
:>:>were some older televisions that used the 6146 tube as a horizontal
:>:>oscillator and or horizontal oscillator amplifier.
:>
:>: Well, why didn't you make that distinction in this post?
:>
:>Had you posted the entire text for everyone to read, they would have seen
:>the topic was about sweep tube amplifier operation.

:>
:>The wording is a bit off, but the point comes through... The 6146 tube is
:>not a true sweep tube,

: It's not a sweep tube at all. It's a beam tetrode designed for RF
: applications.

The point is, Beam Power Tubes can serve the function of sweep tubes... the label is often blurred umoung rf amp home brew types. Just so we both agree (because this issue wastes a lot of time), the 6146 is a beam power tube, which can in the generic sense serve as a "sweep" tube. Onward...

:>There are tubes designed for specific horizontal oscillator - amplifier
:>operation. The 6146 was not designed specific for horzontal oscillator
:>- amplifier "sweep" service. By classic definition, it is not really a
:>true sweep tube, but it can and probably has served the same functions.

: Ok then, regardless of it's "classic" definition, in what make/model
: TV did it serve as a sweep/horizontal-deflection-output/amplifier
: tube? Hell, let's forget all the semantics: What TV EVER used the 6146
: for ANY circuit?

Good question... as I mentioned in a previous post, I was told some of the Heathkit project tv's used them. But it has been such an insignificant issue, I have not cared to research it further. Please feel free to report back any models you might locate. TV circuits tend to be boaring... the actual received tv program contents even worse.

:>Wrong... most sweep tubes were not originally designed for use as linear
:>Mode RF Amplifiers. But there were some that were... the GE - 8950 and
:>the 2057 as two examples. Yaesu also has some whacky part number for an
:>RF Spec'd sweep tube they put in a radio... from memory, the FT-101 series
:>I believe...

: If I remember correctly, the 8950 was a half-assed attempt by GE to
: meet the demand for a cheap RF amp tube with greater linearity than a
: sweep tube, and could also be used as a replacement in existing sweep
: tube amps. I don't think it was ever used as a horizontal deflection
: amplifier, probably because that's not what it was designed to do. In
: other words, the 8950 isn't a sweep tube. I believe the M2057 was
: designed along the same train of thought. But because they were
: basically modified sweep tubes they still didn't have the 'stoutness'
: of tubes designed specifically for RF power.

I would like to see any supporting evidence you might have to qualify your "half-assed" label. But it was made by GE and I believe RCA as I have some under the RCA label. One could never trust the actual mfgr source of some RCA branded tubes.

The 8950 was engineered as beam power tube for rf applications and it easily met the cost effective requirements of many mfgrs. Thats a big deal when you punching out products.

The 2057 was a similar example along with the Japan made rf tube found in some hf tranceivers.

As with all tubes, stay within the mfgrs ratings and the tube lives a long time. I still have original many 70's & 80's vintage 8950 tubes making full output. You might qualify your definition of "stoutness."

:>With a bit of good circuit design, sweep tubes can be made to operate in
:>linear modes with good results.

: ...marginal results. The need for hi-Q tanks, grid tuning, and heavy
: neutralization attest to that fact. The circuit as a whole may end up
: mostly linear, but it takes quite a bit of finagling to get a sweep
: tube to run linear at RF freqs.

What to you qualify as marginal..? Standard Tank Q values were used, grid tuning should be used but was rarely found in a lot of consumer amplifiers (same with non sweep/beam tube amps, tuned input should be used). In the most common GG RF Amps I've seen, neutralization is not required, nor is it used. The whole circuit should be "mostly linear," the "required finagling" doesn't require any major amplifier construction practices that are special. In fact, sweep or beam tube amplifiers are easy to build once you do the proper home work.

:> At one time, they were plenty cheap,
:>which made them a viable option.

: For amateur use only. Sweep tubes weren't used in any commercial
: equipment, which is another testament to the lack of suitability of
: sweep tubes for RF applications.

Wrong, I have commercial made, FCC Legal amplifiers using sweep tubes. One Sonar brand 4 tube amplifier often seen sold on Ebay served a 32 Mhz Multitone Low Band Paging System for 10 plus years before I swapped it out. Other commercial equipment includes mobile Kris and Sonar units I've used myself. A lot of early tube vintage HF Marine radios used beam power tubes, even GE, RCA & Motorola radios.
Beam power tubes worked well in commercial equipment... Although not overly popular (by demand & timing), sweep tubes were right in there with them.

:>The three Swan & Siltronix amplifiers I have using sweep tubes, do not
:>have neutralization, nor does it have tuned grid(s) input. Grounded
:>grid operation does not require neutralization in many of the classic
:>designs. That's one issue which help make them so popular...

: Grounded-grid operation or not, those amps have pentodes wired as
: triodes because the tubes are not linear otherwise, which is nothing
: but a kludge in order to use cheap tubes in place of a 'real' RF power
: tube.

One often finds pentodes in tetrode or triode operation, not rocket science. It is common practice to tie the suppressor grid to the cathode. Depending on the desired mode and available drive power, linear operation

as a tetrode or triode is easy to do along classic construction themes.
The mid 80's ARRL Handbooks had circuit layouts of Linear RF Amplifiers
using sweep tubes in AB1 service... ie not classic grounded grid.

If you want real rf power tubes, you jump to a whole differen ocean... but
why go off topic (again).

: And again the results are marginal, since the power dissipation of a
: pentode is reduced when it is wired as a triode, mainly to limit the
: dissipation from the screen grid. The result is that an 8950 is only
: good for maybe 70 watts on AM with 20 watts of drive (Class B), which
: is terrible considering a 6146 will do about the same output in AB1
: (no drive power). And an 812A will do more than twice that with plenty
: of headroom -- grounded-grid!

That is why you don't see rf amplifiers wired with the screen grid tied to
the plate/anode as you described before. Its seen in tube audio amps, but
not in RF amps... other circuit layouts are very practical and used.

The amplifier is also designed for the mode (am, ssb, cw, fm... etc).
Four or six sweep tubes in GG service can easily give +10dB increase. Very
nice, very cost effective and very linear when done right.

New tube costs circa 70's & 80's found rf rated 6146 tubes priced >+3dB
above sweep tubes. Doesn't take a math major to figure what the results
were... lots of sweep tube amps right along side their big brothers. The
812a was not available or sold in cost effective volume levels to compete
with sweep tubes, else we would have seen more of them.

: As I said before, and will continue to say, the sweep tubes were used
: because they were cheap, and that's all.

That's not all, but we will agree to disagree...

:>Your theory and experience shows to be a little thin on the topic...

: Oh really? What TV used the 6146 OR the 8950 for ANY circuit?

You keep going back to that... I give, you tell me..? Someone once told
me in a different forum, they had a Heathkit TV with a 6146 in the
horizontal output section. I didn't care to argue with them about it, I
mentioned it in another post as an example only... also with known
applications of the 6146 in an SVT guitar amp (of which I have worked on).
If you want to dance and sing on an old example fine, but the band will
wait while you look the fool.
I never claimed to see the 8950 in any TV, you like to skew words quite a
bit. But you claimed not sweep tube was ever made for RF service, then
changed your tune about the 8950 being "half-assed" by GE. I find no data
sheet with "half-assed" in the ratings... nor have I seen it mentioned on
a circuit diagram.

:>Most of the classic consumer amplifier circuits used sweep tubes in low mu
:>operation. I would not label that a generic triode operation.

: What else would you call it?

Triode operation is a bit liberal...

: Grounded-grid is common for power triodes, not for power tetrodes or
: pentodes.

Depends on the tube geometry and what you define as common. It was common to see the 4cx250b in grounded grid operation, although not the best choice.

: Regardless, the radios still used the sweep tubes in
: common-cathode fashion, complete with tuned grids and heavy
: neutralization, and then they were run at very conservatively even in

Common now, you can do better than than... Use the better labels of AB1, AB2 and your more on target. Each mode implies a classic circuit layout for most designs (with variations). Nothing is in stone, it is easy to see some nice variations of broad band input (not tuned input) and no neutralization if you get away from the "radio" part. You jump around within various layouts and we/I have to chase you down in each area.

Radios often found sweep tubes in tetrode service, its all about stage gain at the point in the application (radio power amplifier service).

: SSB: Swan's version of AM is SSB + carrier, or one sideband less than
: A3. Even with that advantage, a pair of 6HF5's are only good for 125
: watts! If that doesn't give clue you into the poor RF characteristics
: of sweep tubes then nothing will.

Depends on the radio.. your talking a Swan 350 that I know about which did not include AM in a version that I've seen. But they made a heck of a lot of different radios.
I would say that size, cost, cooling, gain and overall preformance more than qualify a 6HF5 for the application. So did Swan and they used it in thousands of radios.

If you truely understood the engineering of the majority of Swans radios, you'd see they were designed for SSB and CW service. Swan manuals I have here clearly mention the differences vs AM operation. By the way, Modified A3 operation as done on the siltronix radio works well, less bandwidth. A real plus...

When you change to high duty cycle modes (AM), typeical hf ssb amplifiers have reduced ratings regardless of the tube type. Swan was able to make good quality amplifiers and radios using sweep tubes which met the fcc requirements and preformed well.

:>They were practical, cheap and suitable.... Mfgrs like Swan, Ameritron,
:>Amp Supply, Dentron, Galaxy, Palomar, Pal, SBE, Tempo and others thought
:>them to be quite suitable.

: More like 'barely' suitable. Sweep tubes were suitable for the amateur
: on a budget, which was quite chunk of the market (and still is).

Hence they will be around for some years to come... in linear rf applications.

: Why narrow it down? It all started with two simple questions: What TV
: used the 6146, and what amps currently being manufactured are legal
: for use in the US on 25 to 34 MHz. You can answer the questions or you
: can continue ducking them by trying to "edit this down". Still having
: fun?

Don't have an answer for you about the TV question... so my original text you jerked out of the past has no example other than what I was told and stated about possibly a Heathkit Project TV using one. I have would not care to waste the time trying to find out. In the context of the original sweep tube text, it was meant to demostrate where and how easy tubes could be liberated from surplus sources... and examples of other applications where they might be found.

Alpha Power makes a number of legal amplifiers which are fcc legal and will operate on 28.5Mhz. You are required to provide proof of a qualified license, no hardware modification is required.

There is not really enough of a market to justify amp mfgrs making various models of generic amplifiers in the 25 to 34 Mhz band... if almost much of any market at all. One must also consider the "broad band" type of amplifier vs a specific legal application which tends to be a different type of amplifier layout.

So we don't see a lot of direct market ads for said. Calling various mfgrs to purchase new broad band amplifier equipment for legal 25 to 34 Mhz services is not realistic when you consider strict application of the FCC rules.

But the FCC rules have guidelines that a few companies are willing to work with, should there be enough money to justify said venture. Alpha Power is one such company.

You must be using the same crappy equipment that dickieboy crainumless does. I just turned on the TS-520 and as I type this I am hearing several trucker transmission on 28.085, another two truckers on 28.135, every other word is f***ing this and f***ing that, and more on 28.535, all on AM. The only Ham AM activity I hear is just above 29.0. You guys need to learn how to use a receiver.

My letter to the FCC about the problem of illegal operators on 10 meters will be in the mail tomorrow.

> And that those truckers might have been hams.

Did you ever hear them give a call sign? I bet not, as they most likely were illegal operators.

Jerry, these guys know that there are many truckers and others
illegally using 10 meters, but you're not going to get someone who
breaks the law themselves to turn on fellow lawbreakers.
See my other post, I am hearing them on 10 right now. Just too bad
dickieboy, timmyboy, and twistie can't seem to figure out how to
tune the 10 meter band.

Another bunch just popped up on 28.045, one of the ops AM signal
is FMing so bad you can hardly copy him, another bunch on 28.155,
all English speaking (not South Americans) on AM talking about the
best places to fuel up. More on 28.175 (currently being pretty
well covered up by CW). Now repeat after me, there are no truckers
illegally using 10 meters...there are no truckers illegally using
10 meters. Just keep repeating that and maybe you will finally
convince someone....NOT!
Truckers using 10 meters illegally isn't a problem is it tool?

Then according to timmyboy, you aren't a ham if you won't post a call, he wants proof! But on the other hand, you are pretty much taking the same side as timmyboy does about the illegal truckers on 10 so in that case he won't need any proof.

You got it backward, Davey-boy..those who wail the loudest about
communication laws are the first to get their ISP's yanked for
non-compliance. Talk about hypocriSy and selective obedience.
It's really quite simple for those that intelligently practice selective
disobedience. Those you speak of that had their ISP's yanked, didn't.

Ah, you been trying to convince the hams that truckers using 10 meters is just a myth, but now that someone posts frequencies all over the 10 meter band where these illegal ops are operating, you don't want to hear it.

The drivers get in Saturday morning from their Friday night runs and go home. Now if a supervisor forgets a load they might run it on Sat. morning and only one driver. I have worked for CCX for many years and the last I checked I have never worked on Sat or Sun. I believe I would have been let go if we were open sat and sun an I didn't show up.

Hi, Georgie-Girl. Nice mis-quote you attribute to me. And you still
don't know that "their" is possessive; the word you wanted (but
couldn't spell) was "they're". But that wasn't what I said anyhow, so
it's moot. Just like you.

Aanal Aaron hasn't been right about anything yet and apparently
doesn't have a ham license, so how could he possibly know that "the
hams don't want him"? The hams don't want Aanal Aaron, either! 10-4,
good buddy?

You'd be better off continuing to laugh at Aanal Aaron, as you did a
couple of years ago, when he claimed he was "studying for his Extra"!

He is, at least, good for comic relief.

We have all been wrong at times, Jerry, and you know better than many that we don't see eye-to-eye on many issues. Nevertheless, even though we have clashed in the past, I can respect your views and opinions as a person without prejudice.
It is possible to disagree and be passionate about something without being personal or letting something such as an insult be the first indicator of clouded judgement.

The antenna bill may very well be the shot-in- the-arm hammie radio needs for a facelift.....a massive influx of new hammies. If for no other reason, I believe cbers who previously couldn't have a base antenna would be drawn to possibly getting their ticket.
A down-side could be the no-code lifer-tech syndrome and it's prevailing but minority attitude may proliferate and spread like cancer.
Getting a ticket so one may "get away with more" may cause an initial surge in licensing, but it isn't necessarily a negative connotation.
I hope they take these integral thoughts into consideration.

I have heard something of this as well. Like you, I have also been aware of the trucking industry and the power they yield.
With the current state of affairs and considering what is taking place in our country at this time, I am inclined to believe that weigh stations may be monitored closer than before and the trucks and loads may be closer inspected than before, but I don't see cb or radios as a target in the future. Maybe you are in the know here, but I'm going on my gut and past politics. Besides, we have elections coming soon and people have historically voted the economy. If things don't change.....the 'lil shrub is gonna be a one-termer just like daddy.

Conway central express normal hours of ops are mon-fri. Now we get in Sat. mornings from our Friday night runs and go home. Now if a fos forgets a load or a hot load must move they will move it on Sat. morning. But Sat-Sun the trucks are parked. Now if you work out of a class one as I do and not a five door terminal located in the sticks we do have Sat. morning dock bid that loads brokered freight out west. Now that shift is usually done by 1-2 p.m.. and those guys are off sun and mon and go back to work tues. morning. I am located in Ohio by the way.

> throughout the U.S. -- many documented cases.)

So do cellular telephone sites (just listen to many 2 meter repeaters which are QRMed by them!). So do some over-powered amateurs. Why do you try Aanal Aaron's lame trick of blaming EVERYTHING on CBers?

> -CBers become dissatisfied with their measly 40 channel allocations
> and
> begin spreading out, or "freebanding" as they call it, on to 10m and
> 12m
> amateur bands, rendering those bands virtually useless in some areas.
> I
> hear it every single day, hundreds of examples per day, this becomes
> thousands if the band's really open.

Or they "become dissatisfied with their measley 40 channel allocations" and get a ham license. As far as "rendering (10 and 12 meters) virtually useless", another poster (licensed amateur Jim Hampton) has pointed out that those bands are virtually UNUSED, so who is it hurting?

If you're hearing it every day, why aren't you actively using the band(s) to prevent it instead of whining in a UseNet newsgroup which is read by only a very small handful of CBers to start with? Talk about wasting your time and effort!

> There probably isn't an amateur active on 10m and 12m anywhere in the

The first part of your first sentence says it all: "There probably isn't an amateur active on 10m and 12m in the world." So why the fuss? Use 'em or lose 'em.

> Yes, I am a ham, no, I will not post my call.

Trouble is, RH already knows the extent of the problem regardless of how
many hams don't
object to intrusions of unlicensed ops on the the ham bands. I recently
counted about 25 warnings
on that subject alone. It does make me wonder when a ham (I only have your
assertions on that)
wants to counter efforts being made to protect spectrum against incursion.
Hmmmmm, perhaps a
no-code, VHF ham who uses CB and freeband as a substitute for HF? Maybe he
operates on 10
as well, and wouldn't want any "attention" turned his way? Hey, I DON'T
know that. It is specu-
lation! For one who has full access to all bands and all of the 10-12 Meter
bands, it seems "curious" that anyone who has that privilege would wish to
share that with bootlegger operators.

HAH!! If they are operating below 28.300 on Ancient Modulation, they ARE
illegal even if they
have a ticket!! That area is NOT for voice communications by international
treaty, fer cripes' sakes! NO AM, NO SSB, NO FM. PERIOD! License
notwithstanding, if a ham is caught using
phone down there, he will get a warning/NOV/NAL depending on the
circimstances.

I wrote to them ask them, this was their reply:

Thank you for your e-mail. We do not make Pickups or Deliveries on the
weekends or holidays unless those arrangements are made in advance.
Our trucks generally do not run on these days as well, but there are a
few line haul routes that do run to assure on time delivery. Hope this
helps. :-)

go reread the post voobner. my original comments drew no conclusions. as a matter of fact it had no text at all other than a url.

>You referred to info in a link to a QRZ address and then drew
>conclusions about it; i.e. that part of the band must be legal (for
>unlicensed use) in that country (New Caledonia). If I was wrong and
>that's not what you were trying to say, then tell me.

thats where your thinking is faulty. its not the freeband there because it's legal for them to use. its the freeband here because its not legal. big difference and as of now i still believe i'm correct since nobody has proved me wrong which i know you'd love to do if you were able.

>Do I have this correct: "freebanders" in New Caledonia have told you
>that freeband DXing is legal there?

thats right voobie your having trouble understanding because your totally incorrect. the situation is far from normal. the hams were condemning them without proper cause or right and thats the funny part. they jumped the gun and put there feet in there mouth just like your doing now. what the team was doing is not illegal and thats what the big deal was all about.

>
>I'm having problems understanding what the big "news" is about that

When questioned about that url post, you had this to say:

>actually its more funny that the hams got VERY uptight
>about the whole thing
>assuming that the freebanders and expedtition
>members must be operating
>illegally when in reality that part of the band and that mode is
totally legal
>there. the real truth was that they were bothered that
>the guys were working 11
>meters and making more contacts there than on
>the ham bands and it bothered
>them to take back seat to so called "cb'ers"

I see several conclusions you made all in one paragraph. Want to go
through them one by one?

>>You referred to info in a link to a QRZ address and then drew
>>conclusions about it; i.e. that part of the band must be legal (for
>>unlicensed use) in that country (New Caledonia). If I was wrong and
>>that's not what you were trying to say, then tell me.
>
>thats where your thinking is faulty. its not the freeband there
because
>it's
>legal for them to use.

Huh? Legal for WHO to use WHAT frequency and WHAT mode and in WHAT
country?

>its the freeband here because its not legal. big
>difference and as of now i still believe i'm correct since
>nobody has proved
>me wrong which i know you'd love to do if you were able.

I don't see what you're correct about. You posted a link to some
gibberish and interpreted it as saying that the freeband is legal for
unlicensed DX use in some country you can't even name.

>>Do I have this correct: "freebanders" in New Caledonia have told you
>>that freeband DXing is legal there?
>
>thats right voobie your having trouble understanding because your

totally
>incorrect.

What am I incorrect about? Either unlicensed freeband DXing is legal
in New Caledonia or it isn't. Which is it?

>the situation is far from normal. the hams were condemning them
>without proper cause or right and thats the funny part. they jumped
the
>gun and
>put there feet in there mouth just like your doing now. what the team
was
>doing
>is not illegal and thats what the big deal was all about.

What was the team doing? Who were the team? Where were they operating?
Who were they contacting? It's all very vague, Tim. Since you know all
about it and have contacted New Caledonians, can you help clear it up?

>>I'm having problems understanding what the big "news" is about that
>>link. All I see is the usual situation: "freebanders" operating
>>outside the law...and hams condemning them for it.
>>
>>-A

And that's still the case as far as I can see.

-A

>>>Late yesterday your editor received a phone call from Franck Petitjean, FK8FC, from Noumea, New Caledonia. He informed that he obtained the TX0AT license for the two Italian operators (Paolo, IZ0EVI, and Luca, IZ6DSQ) who are currently operating from the Chesterfields. Simon, IZ7ATN, is not one of the TX0AT operators, as was originally reported. Many have voiced their concerns and questions about the CB/Freeband operation. Franck was able to confirm that this type of operation is legal from New Caledonia, which would include the Chesterfield Islands. There is no power limit and the band plan for this activity must take place between 26.965 and 27.855 MHz. <<<

aaron your beef is with FK8FC and others from New Caledonia. why not try to contact some of them there directly yourself and ask them whats the radio regs for there part of the world? there are plenty of hams listed in QRZ that can confirm it for you easily. i have personally spoke with a couple dx'ers from the 172 division aka New Caledonia and i posted what i know to be true based on first hand accounts from people living there. if you do not believe me or them then thats fine too because its out of my control. i really dont care. if i spoke french perhaps i would do a web search and find you the info but since i dont and its a french speaking country and EVERYTHING so far points to FK8FC and myself being correct along with the locals there agreeing it seems theres really no need. the only person who doesnt believe it is you. why is that? i am correct, prove me wrong if you can.

>What am I incorrect about? Either unlicensed freeband DXing is legal
>in New Caledonia or it isn't. Which is it?

The frequency thing is a problem. The FCC does accept tape recordings at least as a first step in doing their own investigations. When the FCC field engineer takes the stand and says that so-and-so was on xx.xxx MHz the judge, and jury if any, will most likely believe him as an expert witness.

The recording could be doctored, true, however if he is lucky enough
to catch a Ham(s) ID'ing, then it's just a simple matter of contacting
that Ham(s) to verify it.

It's easier than you may think, and may not work every time. Many times when the pirate ops are on 10m they get hammered by Hams using CW, calling DX and using their CALLSIGN. Most Hams keep a logbook of some sort. All you need do is contact one of the Hams heard ID'ing, have them check their log and verify what frequency they were on the date and time in question. If it matches what is claimed for the recording I think its fair to say it hasn't been doctored. Its not perfect but in some cases there is way.

Funny you should mention that Jerry. On channel 19 the other day, I
was monitoring while driving about town, somebody was asking if there
were random checks being made at the weigh stations, with FCC field
agents looking for illegal radio equipment. That got several IMMEDIATE
responses from a number of truck drivers. Then something funny
happened, the constant trucker chatter died off for a few minutes
right after that. Hummm....

"Sir Circumference",
I certainly can't speak for everyone, but the ones
I've heard between 28 and 28.3 Mhz haven't been some of
our neighbors N., or S. of us. They spoke the same
'brand' of english that you hear on ch-19 or the other
channels. You're right, other countries don't have the
restrictions that we do here in the US, but, to be honest,
I don't think I can remember ever hearing anyone on one
of the voice modes below 28.3 Mhz who does have that
privilege.
For those who haven't heard the 'truckers' on 10 meters,
all I can say is that you haven't been listening at the right
times, or frequencies. It doesn't make any difference if
you live near an interstate highway, or not. It really doesn't
matter if there's only a dozen or so people doing it, or a few
thousand. You are going to have a lot of trouble convincing
me that they're just a bunch of 'good ol'boys' who didn't
know any better. I'm not that naive and I don't think that
there are many who are. Ignorance is sort of a lame excuse,
don't you think?

Not quite, but I did help a friend recently with his homebrew 300B SE
stereo amp. Quite the monster, and ridiculouly expensive.

> the description is reasonable in the tube audio amp
>context, but not applied to real world rf amplifers. The actual topic we
>should be on...

Just take a look at the schematic for the 1200-X. The screen and
suppressor are tied to the plate, just like I said. All three grids
are NOT grounded as YOU said.

>It would take a bit of time to go through the above when applied to rf
>amps... so let me defer the question back to you with show me an actual
>rf amplifier circuit using triode mode operation as you describe above.
>I belive you will be hard pressed to do said.

LOL! I would sure like to see an amp where all three grids are tied to
ground. Got an example of that somewhere, Skippy? (You realize, of
course, that this will be another of those lingering questions until
you come up with proof!)

>Your previous web url points to a swan web page, just amp pictures
>are shown, no circuit diagrams to go through... In your next post, how
>about you reference an actual known circuit to support your text.

http://6mt.com/1200x.zip
There are plenty more examples here:
http://6mt.com/swan.htm
And here:
http://bama.sbc.edu

Now it's your turn (actually, it's been your turn for several months):
show me JUST ONE amp that used pentodes where all three grids are
grounded.

>: What I DID say was that the tubes were used as triodes instead of
>: tetrodes or pentodes because of the linearity gained from operating
>: them as triodes. And using triodes in a grounded-grid configuration is
>: not suprising when the circuit requires linearity.
>
>Not really the reason for using them in rf applications as triodes. AB2
>operation is possible using certain tetrodes and pentodes...

It's possible to run Class AB2 using ANY tetrode or pentode. However,
with a sweep tube, it's almost essential to run AB1 to avoid the
severe grid current distortion. Swan even makes a point of this in
their manuals.

>and the extra
>dc (bias, screen) supplies go away. A major trade of linearity for gain
>uses a larger scope of factors. Get away from the tube audio stuff and
>come back to the rf world...

You mean the world where all three grids are grounded?

> One does not need "high fidelity rf
>operation" when you have proper tank Q.

Maybe not "high fidelity", but you most certainly have to keep the
distortion to a minimum. Harmonics can sneak right through a pi tank
just like it wasn't there, despite the fact that they are low-pass
filters. The reason is because they are resonant, and that means they
are also resonant on the harmonics. Linearity is the key to reducing
harmonic distortion when you are talking about linear amps. Jeez
Skippy, that's AC-101 stuff, I can't believe you didn't know that!

> A large gain linearity trade is
>just not realistic as you describe it. I see a lot of triode operated
>rf circuits, just not using triode mode linearity as the major reason for
>doing said... once you have the required min linearity in a good
>circuit... for the required mode, you have arrived.

I'm not arguing about the use or linearity of triodes, the point was
that they used sweep tubes CONFIGURED as triodes INSTEAD of triodes.
Why? Because sweep tubes were CHEAP. Is that so very hard to
comprehend?

>: But this is just another testament to the reason why sweep tubes were
>: used instead of RF triodes like the 812A -- the sweep tubes were
>: cheap. That's all.
>
>Classic sweep tubes were easily made to work in Linear Mode RF Amplifiers,
>cost was a major reason for using them, but not the only one.

It was THE major reason. Sure, there were a few minor reasons, like
the fact that they provided more amplification than a beer bottle...

>: No, I wasn't. Unlike pentodes and tetrodes that are rated by the
>: transconductance, triodes are rated by their mu (amplification

>: factor). They can be low-mu (such as the very early triodes, power
>: triodes, etc), medium-mu (such as the popular 6SL7 and 6C5), or
>: high-mu (such as the 12AX7). Whatever the mu, it's still a triode; it
>: still has IpEp curves that sweep up from zero instead of flat-topping
>: like a tetrode or pentode, it still has the equivalent of three
>: functional elements (tri- = 3, triode, get it?) and it is still more
>: linear than a tetrode or pentode. "Triode operation" is the best
>: label, and that's the label that's been used in tube datasheets,
>: textbooks and manuals since they were first published.
>
>The object of rf amplifiers is hopefully some power (stage) gain. One
>uses the most practical circuit and device to obtain said. People use
>triode operation as you described above in audio circuits, rare if ever
>have I seen it in RF circuits.

Then I guess you have never looked at a schematic.

> Beam Power and or sweep tubes have proven
>to provide practical a cost effective part for Linear RF amplifiers.
>Their operational linearity in a well done circuit meets or exceeds the
>FCC requirements.

Now what does that have to do with the paragraph you quoted for this
response? Remember where you said (in the part you snipped):

>Triode operation is not a good label... most rf people like descriptions
>like low-mu.

Now don't duck the question like you do all the other questions: How
is triode configuration of a tetrode/pentode more like "low-mu" and
not like a triode? (Another lingering question -- I guess I am going
to have to make a list if you keep spewing these ridiculous claims!)

>: You can smoke your grid in any power amplifier configuration. What's
>: your point?
>
>There are circuit layouts which are bad news for rf amplifiers using
>certain tube geometries. One must be aware of such potential problems to
>avoid problems. The grid to plate conneciton scheme you mention is not a
>very good option for rf amps. In my Marshall guitar amp yes... in my

>Onward...

Unfortunately, you are wrong (again). Sweep tubes are designed to take
the very high plate voltages caused by the back-EMF from the flyback
transformer. But I have said that before, haven't I? Yep, and your
response was:

> Ahhhhhhhhh..... looks like your an old tv type... that's the reason your
> so off base. Again, look at the cost of a 6146 vs a 6LQ6 in 1978. If you

>
>I would like to see any supporting evidence you might have to qualify your

>"half-assed" label. But it was made by GE and I believe RCA as I have
>some under the RCA label. One could never trust the actual mfgr source of
>some RCA branded tubes.

I would like to see any supporting evidence you might have to qualify
your "sweep tube" label. Like, what TV was the 8950 ever used in?

>The 8950 was engineered as beam power tube for rf applications and it
>easily met the cost effective requirements of many mfgrs. Thats a big
>deal when you punching out products.
>
>The 2057 was a similar example along with the Japan made rf tube found in
>some hf tranceivers.
>
>As with all tubes, stay within the mfgrs ratings and the tube lives a long
>time. I still have original many 70's & 80's vintage 8950 tubes making
>full output. You might qualify your definition of "stoutness."

It's not too easy to stay within the ratings when sweep tubes are not
rated for RF service. They are not so rated because they were not
intended for use as RF power amps. Are you catching on yet?

>:>With a bit of good circuit design, sweep tubes can be made to operate in
>:>linear modes with good results.
>
>: ...marginal results. The need for hi-Q tanks, grid tuning, and heavy
>: neutralization attest to that fact. The circuit as a whole may end up
>: mostly linear, but it takes quite a bit of finagling to get a sweep
>: tube to run linear at RF freqs.
>
>What to you qualify as marginal..? Standard Tank Q values were used,

>amplifiers (same with non sweep/beam tube amps, tuned input should be
>used). In the most common GG RF Amps I've seen, neutralization is not
>required, nor is it used. The whole circuit should be "mostly linear,"
>the "required finagling" doesn't require any major amplifier construction
>practices that are special. In fact, sweep or beam tube amplifiers are
>easy to build once you do the proper home work.

When I talk about common-cathode amps you spin to grounded-grid
linears. When I talk about grounded-grid linears you spin back to
common-cathode amps. Interesting. So how long are you going to keep
running in circles to avoid the issue?

>:> At one time, they were plenty cheap,
>:>which made them a viable option.

>
>Wrong, I have commercial made, FCC Legal amplifiers using sweep tubes.

>One Sonar brand 4 tube amplifier often seen sold on Ebay served a 32 Mhz
>Multitone Low Band Paging System for 10 plus years before I swapped it
>out. Other commercial equipment includes mobile Kris and Sonar units I've
>used myself. A lot of early tube vintage HF Marine radios used beam power
>tubes, even GE, RCA & Motorola radios.
>Beam power tubes worked well in commercial equipment... Although not
>overly popular (by demand & timing), sweep tubes were right in there with
>them.

Wow! So you really CAN provide proof when you are right! This can only
mean that all your other stories that you refuse to back up with facts
are just bullshit!

>:>The three Swan & Siltronix amplifiers I have using sweep tubes, do not
>:>have neutralization, nor does it have tuned grid(s) input. Grounded
>:>grid operation does not require neutralization in many of the classic
>:>designs. That's one issue which help make them so popular...
>
>: Grounded-grid operation or not, those amps have pentodes wired as
>: triodes because the tubes are not linear otherwise, which is nothing
>: but a kludge in order to use cheap tubes in place of a 'real' RF power
>: tube.
>
>One often finds pentodes in tetrode or triode operation, not rocket
>science. It is common practice to tie the suppressor grid to the cathode.

Yeah, so?

>Depending on the desired mode and available drive power, linear operation
>as a tetrode or triode is easy to do along classic construction themes.

First, linear RF operation of a sweep tube as a common-cathode
tetrode/pentode isn't all that easy. Like I have said coutless times
before, it requires grid tuning and heavy neutralization. Configured
as a triode a sweep tube will run much more linearly, but at reduced
power.

Second, you keep mentioning the word "classic" as if it has some
significance. Care to describe one "classic construction theme", or
explain a "classic definition", or how a "classic" design outperforms
a 'modern' tube amp?

Or do you just use the word "classic" to add a bit of credibility to
your stories? I really think that's the case here, Skippy, since in
all the years on the newsgroups you haven't provided one specific
description of these "classic" designs. Well, now is your chance.

>The mid 80's ARRL Handbooks had circuit layouts of Linear RF Amplifiers
>using sweep tubes in AB1 service... ie not classic grounded grid.

How is "classic grounded grid" any different than 'conventional'
grounded grid?

>If you want real rf power tubes, you jump to a whole differen ocean... but
>why go off topic (again).

Not a different ocean at all, Skippy. The 6146 is a 'real' RF power tube. That's what it was designed to do, even in it's ancestral form of the 807. The 7984 is also a 'real' RF power tube, it may be 'boaring' by your standards, but it can put out a good 50 watts continuous duty FM, so it certainly isn't a slouch. But here's a real kicker for ya, Skippy: the 5763/6417 is a 'real' RF power tube, good for a whopping 15 watts!

And Swan put out many amps with 'real' RF power tubes for the amateurs that had a little extra cash. In fact, their sweep tube amps were nothing more than poor cousins (less expensive duplicates) of their linears with the 'real' RF power tubes.

Get it straight, Skippy: This isn't off topic, it's EXACTLY on topic.

>: And again the results are marginal, since the power dissipation of a
>: pentode is reduced when it is wired as a triode, mainly to limit the
>: dissipation from the screen grid. The result is that an 8950 is only
>: good for maybe 70 watts on AM with 20 watts of drive (Class B), which
>: is terrible considering a 6146 will do about the same output in AB1
>: (no drive power). And an 812A will do more than twice that with plenty
>: of headroom -- grounded-grid!
>
>That is why you don't see rf amplifiers wired with the screen grid tied to
>the plate/anode as you described before. Its seen in tube audio amps, but
>not in RF amps... other circuit layouts are very practical and used.

Oboy, I can hardly wait until you finally get a look at a few schematics. You CAN read schematics, can't you Skippy?

>The amplifier is also designed for the mode (am, ssb, cw, fm... etc).

CW, AM and FM are switched down for reduced power so you don't melt the plates; SSB is put on a keying delay so the relay doesn't chatter. They all do it that way. What's your point?

>Four or six sweep tubes in GG service can easily give +10dB increase. Very
>nice, very cost effective and very linear when done right.

+10 dB might be a little high, but still in the right ballpark. Of course if the tube was linear it could be run AB1 common-cathode and wouldn't need any drive power at all...

>New tube costs circa 70's & 80's found rf rated 6146 tubes priced >+3dB
>above sweep tubes. Doesn't take a math major to figure what the results
>were... lots of sweep tube amps right along side their big brothers. The
>812a was not available or sold in cost effective volume levels to compete
>with sweep tubes, else we would have seen more of them.

807's were a dime a dozen. 6146's weren't that expensive, either, certainly not twice the price of sweep tubes. You know why sweep tubes were considered 'cheap'? Because a lot of people had them in their TV

sets, and when the set went on the blink many of the TV shops would
talk the owners into replacing the sweep tube as a precautionary
measure. Other TV owners would replace the sweep tube not knowing that
the problem was really a bad flyback. And there were quite a few
unscrupulous techs that would claim a bad sweep tube in order to sell
them a new one. So for those and other reasons, there were plenty of
perfectly good sweep tubes all over the place. I remember stopping by
the local thrift shop and they had bins upon bins of them (kinda sad
to think about it now). But you didn't see too many 6146's being
tossed into those bins. THAT's why sweep tubes were cheap, not because
of the price.

>: As I said before, and will continue to say, the sweep tubes were used
>: because they were cheap, and that's all.
>
>That's not all, but we will agree to disagree...

Oh, that's right, they have a higher mu than a damp sponge.

>:>Your theory and experience shows to be a little thin on the topic...
>
>: Oh really? What TV used the 6146 OR the 8950 for ANY circuit?
>
>You keep going back to that... I give, you tell me..? Someone once told
>me in a different forum, they had a Heathkit TV with a 6146 in the
>horizontal output section. I didn't care to argue with them about it, I
>mentioned it in another post as an example only... also with known
>applications of the 6146 in an SVT guitar amp (of which I have worked on).
>If you want to dance and sing on an old example fine, but the band will
>wait while you look the fool.
>I never claimed to see the 8950 in any TV, you like to skew words quite a
>bit.

Whoa, hold on there, butt-wad! I'm not skewing ANYTHING here! You made
a claim, several of them as a matter of fact, and you keep trying to
avoid the issues because you can't back them up and can't admit you
were wrong. So don't lay that 'word-skewing' bullshit on ME!

> But you claimed not sweep tube was ever made for RF service, then
>changed your tune about the 8950 being "half-assed" by GE. I find no data
>sheet with "half-assed" in the ratings... nor have I seen it mentioned on
>a circuit diagram.

That's because the 8950 isn't a sweep tube, it's an RF tube that was
designed FROM a sweep tube. YOU were the one that made the claim that
the 6146 and 7984 (and any other beam tetrode) were all sweep tubes!

>:>Most of the classic consumer amplifier circuits used sweep tubes in low mu
>:>operation. I would not label that a generic triode operation.
>
>: What else would you call it?
>

>Triode operation is a bit liberal...

Let's see now, since the screen and suppressor are tied to the plate, that makes one (1) element; the grid is grounded for the second (2) element; and the input signal is fed to the cathode, the third (3) element. That's three elements total. How many wheels are on your tricycle, Skippy? One? Five? How many elements are in a triode? Two? Four? Well, maybe it's not really working as a triode if there are more than three elements.... hmmm, no more elements! Now if it isn't working as a tetrode or pentode (no screen or suppressor action), and it certainly isn't working as a diode (since it has amplification), and it would be silly to call it a hexode or heptode, then what else would you call it, Skippy?

>: Grounded-grid is common for power triodes, not for power tetrodes or
>: pentodes.
>
>Depends on the tube geometry and what you define as common. It was common
>to see the 4cx250b in grounded grid operation, although not the best
>choice.

It was not that common, but the tetrodes have been used in grounded-grid circuits, but only when the screen was tied to the plate. You know, TRIODE operation! You can't run a screen in a grounded-grid circuit! Where in the HELL did you go to school?

>: Regardless, the radios still used the sweep tubes in
>: common-cathode fashion, complete with tuned grids and heavy
>: neutralization, and then they were run at very conservatively even in
>
>Common now, you can do better than than... Use the better labels of AB1,
>AB2 and your more on target.

You can't read, Skippy. I was talking about common-cathode. You can run an amp stage at A, AB1, AB2, B, BC or C whether it's configured as a common-cathode OR grounded grid. Why do you keep trying to divert the topic?

> Each mode implies a classic circuit layout
>for most designs (with variations). Nothing is in stone, it is easy to
>see some nice variations of broad band input (not tuned input) and no
>neutralization if you get away from the "radio" part. You jump around
>within various layouts and we/I have to chase you down in each area.

Example: the Swan 500 used the 6HF5's in common-cathode, Class AB1. It required a tuned grid and heavy neutralization just to make it linear enough for SSB service (and it still isn't very linear). Matter of fact, much of the neutralization comes from the small RF cage and the close proximity of the plate circuit to the tubes. The rest comes from a variable cap that's about four times the size of one needed for a pair of 6146's.

Now, is there something you don't understand about that?

>Radios often found sweep tubes in tetrode service, its all about stage
>gain at the point in the application (radio power amplifier service).

When a sweep tube is used in place of a RF rated tetrode/pentode, it's
not about stage gain, it's about price. At least it was in the days
they were being built.

>: SSB: Swan's version of AM is SSB + carrier, or one sideband less than
>: A3. Even with that advantage, a pair of 6HF5's are only good for 125
>: watts! If that doesn't give clue you into the poor RF characteristics
>: of sweep tubes then nothing will.
>
>Depends on the radio.. your talking a Swan 350 that I know about which did
>not include AM in a version that I've seen. But they made a heck of a lot
>of different radios.

You mean that you haven't even read the manual for your own radio?
Good grief! Look at page 10 under Transmitter Tuning, you will see a
title that says "AM OPERATION (Single Sideband With Carrier)".

>I would say that size, cost, cooling, gain and overall preformance more
>than qualify a 6HF5 for the application. So did Swan and they used it in
>thousands of radios.

Swan made quality low-cost radios. The main reason they kept the price
down was because they used sweep tubes. Generally, sweep tube rigs
were considered 'low-end' radios, but I hate to use that term for Swan
because the radios were very well built, even if they did lack the
features of high-end radios.

>If you truely understood the engineering of the majority of Swans radios,
>you'd see they were designed for SSB and CW service. Swan manuals I have
>here clearly mention the differences vs AM operation. By the way,
>Modified A3 operation as done on the siltronix radio works well, less
>bandwidth. A real plus...

But you didn't read the manual far enough, Skippy. The sweep tubes
don't have the kind of plate dissipation for anything else BUT CW and
SSB. Because of that, you can't use any kind of limiting, compression
or other speech processing because that would send the average power
beyond the limits of the tube. Not only that, but when the peaks on
SSB draw grid current, the output distorts like gangbusters, even
AFTER the pi filter! That's one of the biggest problems with sweep
tubes, and one problem even Swan couldn't fix.

As far as SSB + carrier having less bandwidth, that's really a
misnomer: the advantage of the narrow bandwidth of SSB is because of
the bandwidth of the RECEIVER, not the transmitter. If you are
receiving AM, the bandwidth is the same REGARDLESS of whether the
transmitted signal is missing one sideband or not!

>When you change to high duty cycle modes (AM), typeical hf ssb amplifiers
>have reduced ratings regardless of the tube type.

Yes they do. Part of that is the difference between RMS and PEP. IOW, the average (not PEP) power used in SSB is pretty close to the RMS power in AM. The Swans are no different. But that's not my point: My point was that the same power could have been just as easily had, in true A3, with a pair of 6146's, which have a lower plate dissipation than the 6HF5's. This means that the sweep tubes are not nearly as efficient as 'equivalent' RF power tubes. Typically, that efficiency is lost trying to make the tube linear. The compensation for using sweep tubes was the price, but that's no longer the case.

> Swan was able to make
>good quality amplifiers and radios using sweep tubes which met the fcc
>requirements and preformed well.

Yes they did. Although the ALC circuit was pretty weak, and didn't do much of a job preventing grid current. And they could have put in a better ANL instead of one that sounds like it's digitizing the voice. I still don't understand why they put the key jack and S-meter adjustment in the back, or why there is a VOX switch on the front panel when the circuit wasn't even built into the radio. It might have been good to put a cap on the B+ line at the power supply socket. It would have been a REALLY good idea to shield the audio line in the power supply cable. And what's up with their cramming the AGC tube under the S-meter so it can't even stand up straight? Speaking of the S-meter, I really think they could have redesigned the AGC so the meter doesn't peg when you turn down the RF gain. And running a plate supply line clear across the radio to a bypass cap isn't the way to prevent feedback. But yes, after replacing the C202 can and shielding the VCO voltage regulator from the PA driver, it's a pretty darn good radio.

>:>They were practical, cheap and suitable.... Mfgrs like Swan, Ameritron,
>:>Amp Supply, Dentron, Galaxy, Palomar, Pal, SBE, Tempo and others thought

>
>: More like 'barely' suitable. Sweep tubes were suitable for the amateur
>: on a budget, which was quite chunk of the market (and still is).
>
>Hence they will be around for some years to come... in linear rf
>applications.

Only until people learn that the popularity of sweep tubes is not because of their performance, but because they were once a cheap substitute for real RF power tubes.

>: Why narrow it down? It all started with two simple questions: What TV
>: used the 6146, and what amps currently being manufactured are legal
>: for use in the US on 25 to 34 MHz. You can answer the questions or you

>
>Alpha Power makes a number of legal amplifiers which are fcc legal and
>will operate on 28.5Mhz.

Not legally.

> You are required to provide proof of a
>qualified license, no hardware modification is required.

Alpha Power (Crosslink, Inc) has only five units that are in the FCC's database. One is a microwave device, one is the 6-meter amp (PA6), and the other three are type-accepted only for amateur use. These three amps are the PA-85, PA-86 and PA-91B. The website lists only the PA-87A and the PA-99 (previously the PA-91B), neither of which have received type-acceptance for any service (not even the 99 because it has been modified from the 91B).

So not only are these amps not legal on 25 to 34 MHz, but they may not even be legal to sell in the US for amateur use (depending on the accuracy of FCC's online database).

Try again, Skippy.

>There is not really enough of a market to justify amp mfgrs making various
>models of generic amplifiers in the 25 to 34 Mhz band... if almost much
>of any market at all. One must also consider the "broad band" type of
>amplifier vs a specific legal application which tends to be a different
>type of amplifier layout.
>
>So we don't see a lot of direct market ads for said. Calling various
>mfgrs to purchase new broad band amplifier equipment for legal 25 to 34

I might be wrong, but unless I am mistaken, 28.000 to 28.300 is reserved for non-voice in this
Region. Aren't you speaking of 40 Meters where Canada has some phone privil eges below
7.150? Besides, there's nothing we can do about what other countries do. When I hear "Tan fer
thar, driver, ah know whutcha mean thar SQUEAK", it is NOT likely a ham but a domestic trucker. If it talks like a Cber, and squeaks like a CBer, it must be a CBer! LOL!

The answer is that I can call CQ to my heart's content right on top of an
illegal station complete with callsign. If no one answers, I can't help
that. If someone does, then I go right back with
R R R de K4XXX, TNX FER CALL, UR RST 579 (ETC). Illegal stations have
absolutely
NO protection from interference from legal and licensed stations. I can
even run a 1500 watt
test below 28.100 right on top of him if I want to. Sir, I don't give a
damn about those truckers;
they aren't supposed to be there to start with. Period! And if I "happen"
to f*** up his tan fer-ing
on 28 MHZ, then the better! FCC has already addressed this and, once again,
whether it suits you
or not, UNLICENSED INTRUDERS HAVE NO PROTECTION AGAINST A N Y INTERFERENCE
CAUSED BY LICENSED STATIONS. You can verify that by emailing
rholling@fcc.gov . And, yes, if I want to do it just for the hell of it, I
can, and there ain't a damned
thing that can be done about it as long as I ID and use the frequency,
including testing, in accordance with the existing regulations. If some
stupid idiot happens to be there illegally, and I
mess up his squeak-beep crap, T O U G H!!!!!!!!!!!!!!!!!!!!

$20.oo to 48 states

Plans on how to make your own base and mobile antennas, from quarter waves
to beams, quads, and MORE. (These files alone will pay for itself)

UNDERSTANDING coax, swr's, line loss, co-phasing, grounding and MORE. (you
could go to library, copy and forget where you put it..)

CD also includes tuning AND modifications on just about every cb as well as
most 10 meter radios. (for educational purposes) golderscrewdriver is what
$39.95? and then vol 2 , 3 ,4 another 100 bucks

Mic wiring to ALL popular cbs, D104, Sedelata, Turner, standard and of
course MORE. (heck, wanna know whats IN a D-104?)

PLL convertions, adding talk-back, swing kits, roger beeps and MORE
(go to your local shop and ask them to do it, what? more money?)

Packed with pictures, how toos, parts and MORE.

How bout takin a radio and electronics course? FREE
Now includes NTE's cross reference 10.0 program to find over 14,000 parts
!!!! FREE
Schematics, figs, how too's, plus a lot of Amplifier stuff, programs that'll
help you BUILD your own stuff..
need I say MORE? ok , What?
I added yet another program !!! SmartDraw..it allows you to make
professional schematics ect..I played around with it and you can save in
about 10 differant formats..even pdf , wow!

email for more info, over 130 megs of info in easy to understand format.

Ya reckon thar's been some info a-leaking out? Seriously, this mess IS
going to get attention; you
can take that to the bank, Leland. Sadly, it is the few that cause hardship
for the many--just like the amplifier rules that came about in 78 (?) which
even affected us hams. The people wandering
about the bands with abandon are going to cause trouble for the majority of
CBers and draw atten-
tion to things that really don't even need attention. Who *really* cares
about a couple hundred watts on Channel 19 so long as they don't bother
adjacent bands or entertainment equipment? Who really cares if they use an
"export" radio on Channel 40 that has 20 or 50 watts? But NO,
they have to go plundering and polluting every damn thing else they can get
into. If they would just
stay OUT of others' pastures, nobody would really care. But they will keep

on....and on......and on
until ENOUGH is ENOUGH, and cause the crackdown that they think can't
happen. Such a thing
is getting closer, believe me. Billy Tauzin is aware of the issue, Mr
Walden is aware of it, ARRL is'
aware of it, of course, and a number of other Congresspeople are being made
aware of it as hams
get more and more damned fed up with it. Just like "they" said, Local
Enforcement laws couldn't be passed, but it did, and those locals that
choose to take advantage of it can do so....even if it hasn't exactly set
the woods on fire. The point is, things CAN be done, and they WILL be.

Once, when he was arrested, he was shackled to a bench with his hand cuffs behind his back. The judge was so afraid of Kevin he wouldn't even undo the cuffs so Kevin could dial the phone to call an attorney! He told them the number and they dialed it then held the phone to his ear.

How do I know? Kevin told me.

They had reason to be afraid - once he showed me how to dial a special three digit number that would shut off all phones in a specific grid.

Nice guy but dangerous.....hehehe

Hi all,

I recently purchased a fully functional Motorola Mocat 40 CB at a hamfest for $1.00. I just picked it up out of the box and the guy behind the table said "one dollar for that." So I took him up on the offer, thinking it was a VHF business band radio or something. I was surprised to find out that it is a CB. No mike or power cord, but a good deal for a buck.

Now my question is, there is a button on the front marked "Extend." It doesn't seem to do much of anything. Can anyone tell me what it does?

And does anyone out there have a power cord for this radio?

Tom

No, Canadian hams can legally use voice below 28.3, I hear them
down there quite often.

Besides, there's nothing we can do about what other countries do.
> When I hear "Tan fer
> thar, driver, ah know whutcha mean thar SQUEAK", it is NOT likely a ham but

Absolutely, it isn't hard to identify the illegal ops, all you
have to do is listen a few seconds and it becomes obvious they are
not hams.

What does it matter? He isn't causing any illegal interference as
you can't interfere with an illegal transmission. They have on
right to be there so if they receive any interference, too bad.

i wasnt questioning your legalities i was just wondering about your sanity. it seems like you get as much joy from it as a channel 19 dead keyer. sure your in the right radio service? seems to me i'd rather be somewhere enjoying my hobby instead of jamming truckers who are likely too close to each other to be bothered anyways. but whats all this talk of 1500 watts? i thought that wasnt ever neccesary? with all the bands and freqs and modes you choose to be right where the trouble is and no where else. thats strange. are you the official defender of ham radio or are you just kinda pretending to be?

Strangely enough, I'm not suprised. Considering that when the screen
is tied to the grid the amplification factor is 4.4 (very low), and
connecting it to ground is only going to make that number lower. So
that amp can't have much gain, which is a terrible waste of those
tubes which are capable of so much more. And the low gain also limits
it's dissipation, so that's why the grids don't melt. But I'll bet
it's really smooth through every one of those six big decibels!

It's pretty straightforward, look at the loss per 100' and price it out.
If you hit a few hamfests, you can probably get LDF4-50 with the ends for
not too much money.
LMR-400 is pretty nice.

Remember that coax loss works both ways.

Mopar',
For all practical purposes, something like RG-213 will work just fine. There will be some loss in a run 250 long, but for the dollar spent, that loss just isn't that much. I'm not sure what the 'LMR' equivalent would be...
'Doc

Maybe you would like a shot at this. 10 Questions for Tim Nebout:

1. What television ever used the 6146 or the 8950?

2. What make/model amplifier is currently being manufactured in the US for legal use in any service on any frequency between 25 and 34 MHz?

3. What is the "IB" service?

4. How is the triode configuration of a tetrode/pentode not like a triode?

5. What does "low-mu" describe?

6. What is the definition of a 'sweep tube'?

7. Because sweep tubes are generally beam tetrodes or pentodes, does that mean every beam tetrode or pentode is a sweep tube?

8. How does the linearity of a sweep tube compare to that of an RF power tube at RF frequencies?

9. Why were sweep tube amps so popular, aside from the price and availability of the sweep tubes?

10. How many sweep tube amplifiers are being produced these days?

If you can't answer those questions then butt out.

Nonetheless, he makes a valid point. Use of radios above 28.000 MHz, requires a valid ham license of at least a tech plus class, and the mode of operation below 28.300 is restricted to CW and data only. There should not be any voice traffic, certainly not using the AM mode, on frequencies such as 28.085.

The FCC has been made aware of the situation, and may be monitoring busy interstates for violations.

> which are QRMed by them!).

Cell phones run in the high 800 mhz range, or higher for PCS phones. For
something like that to interfere with a 2 meter repeater would take a
very strange case of intermod. Cell phone sites normally do not run very
high power because coverage is restricted to the area within the "cell".
It would not be conducive to proper spectrum management to allow the
coverage areas of the cells to overlap by too much.
For the record (as a repeater owner myself), I have never come across
any cases of interference to any 2 meter repeater caused by a cell site.
That doesn't mean it's not possible, but it certainly isn't as rampant
as you imply.

> So do some over-powered amateurs. Why do
> you try Aanal Aaron's lame trick of blaming EVERYTHING on CBers?

You really need to take off the rose colored glasses and stop huffing
twisty gas, and face up to reality. Yes, there are illegally powered
hams, yes, hams can cause interference, and yes, ham towers are
generally not considerd aesthetically appealing by the general public.
But it was CBers, or more accurately, illegally powered CBers, that made
TVI a household word. In the late 70's the amount of CBers outnumbered
hams by over 8 to 1, and that was based on licenses. There were many
more CBers who never obtained a license. Judging from the attitudes
expressed here on this newsgroup, it is easy to see that most of you
guys care little, if at all, about following FCC rules. So why is it so
hard for you to accept the fact that because CBers are more likely to

break the rules, illegally modify their rigs, and run high power, they
are also more likely to cause interference?

>

> meters) virtually useless", another poster (licensed amateur Jim
> Hampton) has pointed out that those bands are virtually UNUSED, so who
> is it hurting?

That depends on where you look. I've heard some fine sounding AM rigs on
29.000. There is FM repeater activity in the 29.6 area. And of course,
there is a ton of SSB activity when the band is open. There is also a
fair amount of CW traffice, in the area that is being encroached upon.

>

> band(s) to prevent it instead of whining in a UseNet newsgroup which
> is read by only a very small handful of CBers to start with? Talk
> about wasting your time and effort!

I would tend to agree that this newsgroup isn't the best place to effect
a change. But what seems to keep perpetuating this topic is the
persistant denial by certain members of this group, that this problem
does not exist.

>
> > There probably isn't an amateur active on 10m and 12m anywhere in the

That's not your call to make. That would be analogous to you parking
your car, and me saying, "hey, you're not using it, so I'll take it. Use
it or lose it".

Actually, what it means is that even though obtaining a ham license
requires a certain set of skills, and some knowledge in radio theory, it
does not mean that you aren't tempted by the same vices that tempt
people who don't have ham licenses.

Having a ham license, in and of itself, does not mean that you are
automatically a person of a higher moral calibre. Although, most hams do
respect the rules of the service to a greater degree, because they had
to earn the privilege of operating there.

I would tend to agree with Mopar. Unless there's a nostalgic reason why you'd want a Super Scanner, you'd be better off looking for a GOOD 5/8th wave omni, or a true beam.

The Super Scanner was supposed to be both an Omni, and a Beam. But like most compromises, it was never good at doing either. My personal experiences with it, showed me that in the "beam" mode, it slightly bested a 1/2 wave GP, that formerly occupied the top of the mast. In "omni" mode, it was lower than the 1/2 wave GP.

Also, as previously mentioned, there were problems with relays, the antenna wind profile was fairly high, and it would blow over easily if not mounted to a strong mast or tower.

We see quite a few trucks pass through my parts with multiple antennas. I'd say the exact percentage of trucks running at least 2 to 3 different antennas on one truck is:

"A fair amount, quite a few even"

I'd bet dollars to doughnuts the trucks I see have separate antennas for the different bands they run on.

Could be that some people , after getting their ticket, find that it was all BS. Their is more than enough room for the truckers, the "no codes", the advanced, the old farts, and the rest of the world. Which, by the way seems far less prone to attacks of analisim.

I might be wrong, but unless I am mistaken, 28.000 to 28.300 is reserved
for non-voice in this
Region. Aren't you speaking of 40 Meters where Canada has some phone
privil eges below
7.150? Besides, there's nothing we can do about what other countries do.
When I hear "Tan fer
thar, driver, ah know whutcha mean thar SQUEAK", it is NOT likely a ham
but a domestic trucker. If it talks like a Cber, and squeaks like a
CBer, it must be a CBer! LOL!
J

So labeling nocodes in the same manner is just as valid?

Funny you should mention that Jerry. On channel 19 the other day, I was monitoring while driving about town, somebody was asking if there were random checks being made at the weigh stations, with FCC field agents looking for illegal radio equipment. That got several IMMEDIATE responses from a number of truck drivers. Then something funny happened, the constant trucker chatter died off for a few minutes right after that. Hummm....
--
Leland C. Scott
KC8LDO

That's those truck drivers...always polite and willing to give a guy a break...too bad they don't know you like we know you.....they would have kept on talking instead of listening to you get your rocks off by asking a stupid question like that.

It's easier than you may think, and may not work every time. Many times when the pirate ops are on 10m they get hammered by Hams using CW, calling DX and using their CALLSIGN. Most Hams keep a logbook of some sort. All you need do is contact one of the Hams heard ID'ing, have them check their log and verify what frequency they were on the date and time in question. If it matches what is claimed for the recording I think its fair to say it hasn't been doctored. Its not perfect but in some cases there is way.

The frequency thing is a problem. The FCC does accept tape recordings at least as a first step in doing their own investigations. When the FCC field engineer takes the stand and says that so-and-so was on xx.xxx MHz the judge, and jury if any, will most likely believe him as an expert witness.
--
Leland C. Scott
KC8LDO

Stand? Judge? Freebanders appearing in court? LOL! It just doesn't happen that way.
If one is allegedly recorded on an unauthorized frequency it MAY or may not be investigated. If it is investigated and determined by an authorized field agent that the law was violated, an NAL may be forthcoming after a warning, especially in the context you speak of (freebanding).

2501. Re: Breaker Breaker, this is amateur ham radio

Newsgroup: rec.radio.cb
Date: 2002-10-23 14:28:44 UTC
From: twistedhed@webtv.net
Message-ID: <13010-3DB6B21C-52@storefull-2314.public.lawson.webtv.net>
Source record: 141285

Actually, what it means is that even though obtaining a ham license
requires a certain set of skills, and some knowledge in radio theory, it
does not mean that you aren't tempted by the same vices that tempt
people who don't have ham licenses.
Having a ham license, in and of itself, does not mean that you are
automatically a person of a higher moral calibre. Although, most hams do
respect the rules of the service to a greater degree, because they had
to earn the privilege of operating there.
Dave
"Sandbagger"

There are no skills involved in attaining today's version of a nocode,
merely memory. If anything is exhibited, it is one's memory capacity,
not skill. Some nocodes seem to freak over this and try to be accepted,
but those are the ones you find hassling cbers because other hammies
don't want to play with them.
According to that last line, would that work if you substituted another
word for "hams",,,,say, hunters, drivers, fishermen, etc?
How about community LPFM?
What "skill" is demonstrated by the name on the permit other than the
ability to sign your name?

IN the flatlands, to a station at the same sea level as your station, mobile to mobile, on a quiet night, you can probably count on about 15 miles at four watts. During the day, you can probably count on at least a couple of miles, depending on how bad the band is being trashed by dirty amplifiers and sporadic-e.

Well here we are, the usual 10 meter trucker channel (28.085) is
buzzing with truckers illegally operating in the 10 meter band,
some more illegal ops on 28.075, more truckers on 28.305, but I
must be dreaming as dickie c., tools, and others say there aren't
any truckers using 10 meters.

Nope. Just pointed out the GNU Radio link is the most significant link to look at. People have been doing DSP work for a long while. About 6 to 7 years ago a buddy of mine was using some custom written DSP filtering software on his Windows based machine to clean up the sound from 78 RPM LP's. Then he would burn the sound file to CDs or record them on to cassette tape. There are people out there who have for years sold DSP filtering software, for radio use, using one's home computer. You could say that is the beginnings of the SDR concept right there.

What is different with the GNU Radio concept is the structure of the radio is "open". Same concept as computers. Once you know how the hardware is designed you can write software to drive it. As far as I know radios like Ten-Tec the hardware design is closed so that anyone outside of the company can't write software for it. Sure you may have a schematic for the rig, but it stops at the pins to the custom IC's. The sort of defeats the purpose of SDR in my view.

So what is your warped logic here that you think gives them the
right to use 10 meters illegally? The conversations I hear don't
have anything to do with 'keeping the country going', it is
usually f***ing this and f***ing that and, "did you see the boobs
on that gal in the honda?" type crap. All they are doing is
yapping while going down the interstate, nothing that applies to
doing their job. They can do all that on 11 meters where they
belong.
You have the same attitude as timmyboy and twistie, see something
that you perceive as not being used and just take it for yourself,
no matter you have no right to it. You, timmyboy, and twistie
related by chance?

I know it is. I've heard the bozos myself on 28.005 and 28.085. I love it when the pirates try to continue talking with 20 CW stations banging away all over the top of them. You can't tell me under those conditions that they DON'T KNOW they are in the Ham band.

I don't think anyone is in denial about it, most know that people do
those things. It's the constant posting that is a
"problem" or like it is an "epidemic" when it's not.
Cb is slowing down, slowly but surly, because of
cell phones IMO. Go take a look around the neighborhoods,
do you see as many antennas now as you might have
7 years ago? Probably not, when you can get a cell phone
and its use for $9.95 a month, why would you want to
spend $40.00 for a cb? Cell phones are far more
reliable and way more private.

That is correct. About a year back while trying to
figure out who is who on this group, I noticed that very
thing. Here's a few examples that I saved:

So ramble on Raggy, you have shown you're true
intentions here..... Troll.

Landshark

--
If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

TW,

RH does send warnings to trucking companies based on recordings. That is,
indeed, what happened to the last driver. The safety director chose to fire
the driver rather than be held respon-
sible for further infractions. That firing *may* (I don't know, I wasn't
there) be based on an inspec-
tion of the truck where he found the Galaxy, Connex, or whatever. I would
think that RH filled in the safety director on what to look for.

Now, you are probably right WRT an NAL. It gets a mite more
legal-beagle-ish at that point.

FCC and most legal operators do (or should) care that the band is being used
illegally by intruders.
One of the principles of Amateur Radio is that it is to be self-policing to
a certain extent, and if it
is being used improperly by stations, legal or otherwise, then it is the
obligation of licensees to attempt to abate the offense. I once realized
that a local station of 2 Meters was pirating a call of
a ham in Mississippi. I phoned that ham and let him know that his call was
being used illegally. He
then alerted FCC. Why? So he would not be held responsible for the
improper use of his call by
an unlicensed bandit.

Besides, why can't I use it for some local CW with my buddies? Bottom line
is, them truckers are
not authorized to be there, and I will do whatever I can to get rid of them
thar beepers and squeakers. They have channel 19. Let 'em go there where
they belong.

<<snip>>

> > from what you say sounds like theres more truckers on ten than there are
> ham's.
> > why is that?

Because the importers and sellers of non-approved radios are actively
pushing these rigs
at truck stops and CB shops.

Because they are telling truckers they can "git mo' of them thar 'channels'
wid a 10 Meter reddio
thar, an' git mo' power thar, tan fer (thar)?"

Because some truckers don't even know that what they are doing is illegal.

Because they believe that FCC doesn't care about what they do wid them thar
reddios.

Because, up until a few years ago, they were RIGHT!

Because the sense of what is right or wrong has been muddied in this country
and people are more
"me and what ah want" than in the past.

Because the drivers listen to the lower end of 10 and don't hear any voice
transmissions and think it
is "empty".

Among other reasons.

I think that the truckers do not think hams are worth thinking about. Ham is
a hobby. Trucking is a job that keeps you supplied with everything you have.
Keeps the country going . Where ham SOMETIMES helps in an emergency. So use
a small amount of logic, who is playing on the radio, and who is useing it
to help keep the country operating?

Far as I am concerned, them thar truckers up 'ere on 10 lack a lot of
things. I'll take the professional sound of a well constructed ham station
any day over the trailer-trash-sounding,
echo-ing beeping and stupid squeaking. "Uh, tan fer thar, driver, mercy me
thar, I heerd that,
ah did, gre't day, git back SQUEAK!!!"
>
> >Absolutely, it isn't hard to identify the illegal ops, all you

It becomes obvious they are not a LOT of things! If they were as smart and
as important as they
think they are, they would have sense to know that CB radio has 40 distinct
channels; no more, no
less.

> So labeling nocodes in the same manner is just as valid?

No codes are licensed hams. Period. Their privileges are just limited as
opposed to higher licenses. There is no shame to be attached to being code
free. Some people choose to remain
on VHF because that is where their interests lie. There's nothing to label.
Yes, some people have
to "lord" it over no-codes because it is the way they make themselves equal
or "better". Being a
Technician in no way diminishes a person's abilities. When I hear a trucker
on AM using the usual
CB vernacular on or off the regular 40, it is obvious that he is a trucker.
THAT is undeniable.

Well, I guess the best advice I can offer you is be very careful. Some of those good ol boy redneck truckers can be right hard to handle when they get riled. They might not take your efforts too kindly. And please do not go on about how safe you are. They can find you just as simply as you can fine them. Jeezus man, we do not live in a nice safe little world. I do not agree with you that anything needs be done about it. But even if I did, I would still advise you to think about what could happen.

Well lets see..... Two matched antenna for the CB, one antenna for the scanner, one antenna for the cell phone, one antenna for the am/fm radio. Yep, they sure do have separate antenna for the different bands. How bout that?

Your beating a dead horse JJ, give
it a rest please.

Landshark

--
If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

2551. Re: 10 meter intruders

If you weren't such an idiot Twisted people would take you seriously.
Nothing like your inability to even read clearly to make a clown out of
you. So explain how you got a FCC Field engineer to morph in to a
Freebander in the quote above?
--
Leland C. Scott
KC8LDO
ARRL Member
NCI Member

Well, let's see......you claimed:

>The frequency thing is a problem. The FCC does accept tape recordings
at least as a first step in doing their own investigations. When the FCC
field engineer takes the stand and says that so-and-so was on xx.xxx MHz
the judge, and jury if any, will most likely believe him as an expert
witness.
<<

So this scenario doesn't apply to freebanders only to 10 meter
intruders?
Hell, Lelnad, if anyone is guilty of being an "idiot" , you better check
yourself. Your scenario doesn't apply to 10 meter intruders either.
Since you brought it up, just who is it you wish your comments apply to?

Because the importers and sellers of non-approved radios are actively pushing these rigs
at truck stops and CB shops.
Because they are telling truckers they can "git mo' of them thar 'channels' wid a 10 Meter reddio
thar, an' git mo' power thar, tan fer (thar)?"
Because some truckers don't even know that what they are doing is illegal.
Because they believe that FCC doesn't care about what they do wid them thar reddios.
Because, up until a few years ago, they were RIGHT!
Because the sense of what is right or wrong has been muddied in this country and people are more
"me and what ah want" than in the past.
Because the drivers listen to the lower end of 10 and don't hear any voice transmissions and think it
is "empty".
Among other reasons.
Jerry
----------Because YOU can talk there. Nocodes can't.

Source record: 141337

>No codes are licensed hams. Period. Their privileges are just limited
as opposed to higher licenses.
<<

Same can be said about law-abiding cbers. Some of us still have our call
signs. Its not our fault they discontinued them.

>There is no shame to be attached to being code free. Some people choose
to remain
on VHF because that is where their interests lie. There's nothing to
label. Yes, some people have
to "lord" it over no-codes because it is the way they make themselves
equal or "better". Being a
Technician in no way diminishes a person's abilities.
<<

Certain nocodes feel it gives them the right to "Lord" over cb. They
frreak when they can't realize it.
A nocode license may not diminish one's abilities, but it certain
doesn't enhance anything.

> When I hear a trucker on AM using the usual
CB vernacular on or off the regular 40, it is obvious that he is a
trucker. THAT is undeniable.
Jerry<<

So is a new nocode on 2 meter. So is half the wives that share one call.

Damn you're really sharp timmyboy. It is obvious to the most
casual of observers that two truckers running down the Interstate
a few yards apart are going to be difficult if not impossible to
interfere with by another station miles away. I have managed it a
few times when conditions were really good.
By the way in the context of your sentence the word is 'their' as
in 'their way' not 'there' as in 'put it over there'. But then
what else should we expect of a high school dropout.

Hi Jamey, My name is Woody Parr and I'm up the road in Cornelia. I'm afraid that I'm indirectly responsible for this troll who is badmouthing you at alt.religion.urantiabook. You see he was only there in the first place to attack me.

This idiot is Steven J. Rogovich, 1612 Lake Christopher dr. Virginia Beach, Va. 23464 He followed me to the UB usenet page from alt.radio.pirate He and I (were) both formerly loosely associated with each other in the shortwave pirate radio listening hobby. I USED to be a shortwave pirate but my station has been permanently retired for more than 2 years now. Stevie is still a pirate and is the

operator of the station Radio Free Speech. He is also the moderator of a message board at the Free Radio Network < www.frn.net > and goes by the handle of Pat Murphy there. I had a falling out with the people at the FRN a couple of years ago as they became corrupt and were doing so inappropriate things. I dared to open my mouth and openly complain about there stupid activities which since they havn't yet ceased to follow me around the internet anywhere they can and attack me.

Steve is also on the usenet trolling people under the name of Richard Cranium (richardcranus@yahoo.com) He's far too much of a coward to debate anyone using his real name.

I'm considering a GMRS system to keep in contact with my mom who doesn't have a phone. (LONG story!) We've both had CBs in the past, but no experience with GMRS. We're 5 miles apart; I'm in a river valley and she is in the mountains about 400 feet above. I hear so many conflicting reports about the range of GMRS units, I'm hesitant to make the investment, especially since she's in elderly housing and I'm in a condominium, so it's doubful either of us can get permission to put up massive antennas. Can anyone offer me some guidance based on their experiences, please?

> to buy.

If you like losing almost 3 db in coax loss which is 1/2 your power then use
rg213. I don't think money is of a concern to you Mopar so If you now run a
500 watt amp your gonna need a 1kw amp to have about the same signal as you
would with 250' of rg 213. So the difference in coax cost has to be much
less than the cost of the bigger amp you would need to see that same watts
as someone with lower loss coax. go with the LMR400.

Source record: 141349
Cross-posted to: alt.ham-radio.marketplace,rec.radio.amateur.equipment,rec.radio.cb,rec.radio.swap

A group of hams who are fed up with the FCC's efforts to stop the spread of illegal amplifier use are reported to be buying linear amplifiers and installing trojan horse mods that can burn out the receive section of transceivers operating out of band.

The modifications detect certain transmitted frequencies and trigger a device installed on the amp that places a series of high voltage pulse type signals across the antenna line effectively burning out the front end of the receiver.

Only technicians familiar with solid state circuits can detect the devices which are cleverly disguised as actual amplifier components.

Be very careful when purchasing used amplifiers or purchasing amplifiers online from unknown sellers. The information that I have received indicates the normal user will re-sell the amplifier which once again will perform it's mission un-detected during normal use. The user will think the problem is his transceiver, not the amplifier. Use extreme caution.

Well, there ARE ways to shut down a node. But hardly with 3 digits.
That's undoubtedly BS.

Back when the DTMF was a 3x4 matrix for customers (and 4x4 matrix for
control like on some HAM HTs) the 'phone company matrix was
quite different, and those extra keys....

Well, time to leave that one alone.

3 digits to shut down a node now? Yeah, right. And you found those
three digits written on a piece of paper in that Corvette for $50 every
knows about from the 60's!

WAIT!! Was there a black helicopter involved?

Mike

The modifications detect certain transmitted frequencies and trigger a device installed on the amp that places a series of high voltage pulse type signals across the antenna line effectively burning out the front end of the receiver.

Only technicians familiar with solid state circuits can detect the devices which are cleverly disguised as actual amplifier components.

Be very careful when purchasing used amplifiers or purchasing amplifiers online from unknown sellers. The information that I have received indicates the normal user will re-sell the amplifier which once again will perform it's mission un-detected during normal use. The user will think the problem is his transceiver, not the amplifier. Use extreme caution.

It might be much easier to hook a low-Q series LC circuit resonant for 27.2 (or thereabouts) straight from output to input. Blows the radio, self-destructs the amp, and the evidence goes up in a puff of smoke.

>do you know of any? if so quit holding out an dprove your point.

Nope. No TV's used them that I know of. And I know of a lot. That's
what I did for a job in jr-high & high-school.

>>2. What make/model amplifier is currently being manufactured in the US
>>for legal use in any service on any frequency between 25 and 34 MHz?
>
>there are none being made specifically for that purpose but there are plenty
>legal ones sold that will easily work there with a mod proveided by the
>factories own info.

The amps you describe (such as Skippy's example 'Alpha Power') are not
legal for any other service except amateur, and then only for the
freqs other than the spread prohibited by 2.815. The 'unlock' feature
makes these devices the amplifier equivalent of an 'export' radio.

>>3. What is the "IB" service?
>
>never heard of it, care to enlighten us? or are you asking because your totally
>clueless as well?

There is no IB service.

>>4. How is the triode configuration of a tetrode/pentode not like a
>>triode?
>
>sounds like a triode to me. why were you thinking differently?

I wasn't thinking differently, Skippy was. In fact, triode operation
of a tetrode/pentode is exactly like a triode.

>>5. What does "low-mu" describe?
>
>i always thought that was a way of describing its gain factor?

It's the amplification factor of a triode. The amplification factor is
not the same as the gain factor, since the gain will always be less
than the amplification factor (I know it sounds goofy, but that's the
terminology that was chosen almost a century ago, so that's what is
used today).

>>6. What is the definition of a 'sweep tube'?
>
>that seems like its in debate by you and skip. you guys know more so let me
>know when you reach a decision.

Since the word "sweep" comes from the horizontal and deflection
circuits of a CRT (picture tube) circuit, a "sweep tube" is a tube
that is designed specifically for video deflection circuits.

>>7. Because sweep tubes are generally beam tetrodes or pentodes, does
>>that mean every beam tetrode or pentode is a sweep tube?
>>
>
>no i dont think they are

Of course they aren't.

>>8. How does the linearity of a sweep tube compare to that of an RF
>>power tube at RF frequencies?
>
>if done right they can be made just as linear. i would say around 10db is just
>as good as most other glass tubes

The key phrase here is "if done right". Care to elaborate? Not even
Skippy want's to share that information. That's because it's an
engineering headache to make those things run linear. The real answer
to the question is that most RF power tubes are linear out-of-the-box,
and sweep tubes don't even compare.

BTW, linearity isn't measured in decibels. If you were talking about
power gain, if the tube doesn't require any drive power (class A1,
AB1, etc), then power gain is theoretically infinite.

>>9. Why were sweep tube amps so popular, aside from the price and
>>availability of the sweep tubes?
>
>they were so popular because they were made a dime a dozen with everything
>being cheap from surpuls. whats your theory?

No different than yours. Cheap parts, including the tubes. Cheap labor
didn't hurt much, either.

>>10. How many sweep tube amplifiers are being produced these days?
>
>theres alot of them however most are using the EL509 or EL519

First off, are the tubes you mention really sweep tubes, or are they
RF power tubes? According to Svetlana, the "EL509/6KG6 is a beam power
tetrode intended for use in Class A, AB, or B audio amplifiers and for
Class B or C RF amplification". Basically, it is a tube that is along
the same lines as the 8950, being a power pentode that can be used to
replace sweep tubes.

There are plenty of homebrew AF and RF amps using these tubes, but I
know of no RF amps in production that use these or any other sweep

tubes (or compatible replacements).

>>If you can't answer those questions then butt out.
>>
>
>i'm beggining to think you cant answer these. are you going to keep asking

GMRS is a good option for you. Unlike the rest of the info you've been getting, 5 miles is NOT a problem!

Go here and learn...

http://www.gmrsweb.com/gmrs.html

and then click on the "Bill's 2 Way" link to buy a Pryme radio for GMRS. You will need to pay for 2 licenses. One nice thing about GMRS is that the frequency is so high that the antennas are SMALL!

I can help you with a simple j-pole you can build yourself using materials from Home Depot for UNDER $20.00 each.

My information is FREE and I have nothing for sale...so my information is genuin and true. Good Luck!

Dino

Hold up there, Georgie-girl! There is no way I'd spend a dime to mess with you. You simply aren't that high on my list. Don't flatter yourself. Besides, that would defeat my purpose. I WANT you to know it's me that takes a minute out of my day to point out the fact that you are an idiot. That being said, I can see where others would want to jerk your chain anonymously. At any rate, it is funny to watch you lash out in all directions like a rabid pit bull with no teeth! And RR spanked me? That's a laugh! Keep 'em coming Georgie-girl.

Why don't you talk Skipp into look up those answers? Even Tim did a
better job answering them than Skippy.

>BTW, how goes the studying for your ham test? ;)

Not too bad. Even got a rig to start with. It does 80 to 10 meters. I
listen in on 10 meters once in a while and hear lots of freebanders.
Have you figured out how to tune your radio for the 10 meter band yet?

: yeti@cet.com <yeti@removecet.com> wrote:
: 1. What television ever used the 6146 or the 8950 in any part of the
: horizontal or vertical sweep circuits?

Review the two previous answers supplied by me within the last week, one done yesterday. No need to retype the answer a third time, go find it.

: 2. What make/model amplifier is currently being manufactured in the US
: for legal use in any service on any frequency between 25 and 34 MHz?

Alpha Power, 99b as currently advertised on their web page. You seem to want to do the boobner hard line dance..?

: 3. What is the "IB" service?

Not currently in use by the FCC, I was under the impression it was, but the current FCC "Industrial Business Pool" Licenses are now grouped under the "IG" designation. I used the label to describe legal Industrial Business Pool Licenses within your magical 25 to 34 Mhz window, of which are allowed modest (when compared to other services) or higher (vs CB) power operation which might require the use of an rf amplifier to transmit at ther full authorized limit. So did you research any Industrial Business Licenses to see allocations within your area of contest that are allowed higher power..?
What did you find dear boy..? Yeah... there are some What a concept...

: 4. How is the triode configuration of a tetrode/pentode not like a
: triode?

The "triode mode" grid to plate connection you described is not used in many/most rf amplifiers, regardless of the tube type. You clearly showed your background example was from the tube audio world and does not play well in rf applications. Your theory is weak in rf... the topic of choice.

: 5. What does "low-mu" describe?

Specific to what..? operation, circuit layout, tube type, tube element construction "geometry..?"

: 6. What is the definition of a 'sweep tube'?

It is an informal reference to the function of a tube in TV sets. Also used as slang to describe a generic style type of tube used to provide said function. You have a dictionary of Electronics around that you wouldenlighten us big boy..? What's your hard fast answer..? ... and from what reference do you make it..? Was it worth the trouble..?

: 7. Because sweep tubes are generally beam tetrodes or pentodes, does
: that mean every beam tetrode or pentode is a sweep tube?

What a dumb question... but since your burning for an answer, No. By the way, the formal label is "Beam Power Tube." If your going to nit pick at stupid issues, don't forget the complete label.

: 8. How does the linearity of a sweep tube compare to that of an RF
: power tube at RF frequencies?

Another dumb question. Even sweep tubes not originally engineered for RF applications work very well as RF power tubes. As described by me (and others including the ARRL & W6SAI Radio Handbooks), their comparison is about mute as they are easily able to meet or exceed FCC requirements for such applications. In short, they do the job pretty well for what they are.

Many tubes not originally designed for radio rf applications, can and do work in said areas. The horizontal output tube of some tv sets is one such example.

: 9. Why were sweep tube amps so popular, aside from the price and
: availability of the sweep tubes?

They are relatively easy to construct... ARRL Handbook projects from the 60's and or 70's show a classic 4 tube project. What more are you looking for buck'o..?

: 10. How many sweep tube amplifiers are being produced these days?

You going to dance and sing about the next reply..? I would imagine only hundreds. The KLV Italian brand, Ameritron might still be making their unit (but I doubt it). The current rage is to retro fit Dentron, Amp Supply and similar vintage rf amplifiers with the Ruski (Svetlana) type EL-509/519 tubes. I've done my share of them...

So where are you going with all of this..? is it just your attempt to try and nit pick..? Are you going to supply us with some magic theory I or we need to read. Do you have a web page somewhere with articles or text that you have writen on the subject..? Do you have civil conversations with people over these topics that interest you..?

With the 70's, 80's, 90's wind down of glass tube production, all tube prices rose up and out the window of reason. Only the influx of foreign mfgrs again make similar type tube a practical alternative. Hence, we see new made KLV brand amplifiers for sale again. People buy them...

gotta go... it's music night..! yee ha..!

I'm familiar with several of those licensees (IG between 25 and 34 MHz). I work for one of them and use the service under their license. That's why I know you are wrong.

>: 4. How is the triode configuration of a tetrode/pentode not like a

Even if all three grids are tied to ground it's still a triode
configuration, and operates as a triode. But nice try at side-stepping
the question -- it's obvious that you refuse to answer it.

>: 5. What does "low-mu" describe?
>
>Specific to what..? operation, circuit layout, tube type, tube element
>construction "geometry..?"

I suppose you think side-stepping won't work twice in a row, so now
you try and act stupid? Let's make this a multiple choice question:

The designator 'mu' (greek leter 'micron'), when used in reference to
the specifications of vacuum tubes, is a label for the amplification
factor of a:

A. Diode
B. Triode
C. Beam Tetrode
D. Pentode
E. None of the above

>: 6. What is the definition of a 'sweep tube'?

Bzzzt! Wrong answer. Too bad. But since you did so well on the last
two questions, I'll give you a chance to look at the EpIp curves of
both types of tubes and answer this question again. Fair enough?

Oh yeah, the word is 'moot', not 'mute'. Your voice recognition chip
might be overheating...

>: 9. Why were sweep tube amps so popular, aside from the price and
>: availability of the sweep tubes?
>
>They are relatively easy to construct... ARRL Handbook projects from the
>60's and or 70's show a classic 4 tube project. What more are you
>looking for buck'o..?

You are suggesting that amps using proper RF tube were more difficult
to build? Bzzzt! Wrong again! Although the question was intended to
mean production amps, many homebrewers had problems with the sweep
tube amps. I remember my Uncle tried one once and he kept blowing tube
after tube until he finally added enough neutralization to keep it
from oscillating into smoke. He wasn't the only one, either.
Homebrewers also had, and still have the problem of grid current,
which is an absolute no-no with sweep tubes. RF tubes are more
forgiving in that situation, and with a tuned grid you wouldn't even
notice it. But with sweep tubes not even a tuned grid with a swamping
resistor is going to make the crossover much smoother.

No, they are NOT easier to construct. The only exception might be if
the tubes were run grounded-grid, in which case you have to solder
three pins instead of one (for a factory triode), which is not a
significant effort.

>: 10. How many sweep tube amplifiers are being produced these days?
>

>EL-509/519 tubes. I've done my share of them...

No song and dance. I think you will agree that very few, if any, sweep
tube amps are being manufactured.

>So where are you going with all of this..?

Simple. If sweep tubes are so great, why aren't they being used
instead of power tubes designed for RF applications? Because they
aren't so great!

BIG DUH!!!

> is it just your attempt to try

Who's bitter? You got three correct answers (maybe four, I'll give you
the IB service question), and one that you can do over again. That's
more than I expected. Actually, I thought you would try and obfuscate
every single question. But I was only half wrong...

Hi Jamey, My name is Woody Parr and I'm up the road in Cornelia. I'm
afraid that I'm indirectly responsible for this troll who is
badmouthing you at alt.religion.urantiabook. You see he was only there
in the first place to attack me.

This idiot is Steven J. Rogovich, 1612 Lake Christopher dr. Virginia
Beach, Va. 23464 He followed me to the UB usenet page from
alt.radio.pirate He and I (were) both formerly loosely associated
with each other in the shortwave pirate radio listening hobby. I USED
to be a shortwave pirate but my station has been permanently retired
for more than 2 years now. Stevie is still a pirate and is the
operator of the station Radio Free Speech. He is also the moderator of
a message board at the Free Radio Network < www.frn.net > and goes by
the handle of Pat Murphy there. I had a falling out with the people at
the FRN a couple of years ago as they became corrupt and were doing so
inappropriate things. I dared to open my mouth and openly complain
about there stupid activities which since they havn't yet ceased to
follow me around the internet anywhere they can and attack me.

Steve is also on the usenet trolling people under the name of Richard
Cranium (richardcranus@yahoo.com) He's far too much of a coward to
debate anyone using his real name.

By golly, someone DOES make sweep tube amps! Let's see, what has the
total come to so far...

One!

Yup, and it could go the *other* way as well. You see, I don't consider
myself to be Big and Bad.
BUT! I am a quite large framed person (not fat) and I have huge hands and a
pretty good grip. I
spent quite a few years as a laborer on a railroad and I swung a sledge and
lifted heavy objects on
a daily basis. I also have a background in self-defense, and while ANY-one
can get beat up, I do
know some of the finer points of taking someone off their feet or disabling
them. I don't consider myself tough, but I am not a pushover, either. So if
anyone decided they wanted to start something
with me, they would need to size me up pretty well, and if I think they are
about to *do* something
I may resort to, hnmmm, let's see, Eagle's Claw is pretty effective against
an aggressor.

Now, with that out of the way, some observations. You *seem* to be a
no-code VHF person, that is if you do have a ticket as you asserted
previously. I also seem to recall that you are a trucker. If I am wrong,
sorry. And if my assumptions are true, then I can see why you wouldn't care
about "them thar drivers a-tawkin' jist anywhirs they like". If you don't
operate on 10 (legally),
then I can see where you are coming from. Then, do tell me where it SHOULD
be ended? On
18 MHZ where the military operates, or 11 MHZ where such could interfere
with Andrews AFB?
Yes, the military STILL uses non-encrypted SSB phone for some operations.
Should "them thar
mercy me thar drivers" be welcomed onto the other ham bands as well? Should
we just forget about ANY form of regulation? Do you REALLY mean to assert
that you don't listen to the 40
CB channels, or the "stupid, uh, er, I mean, the Superbowl" on channel 6?

Do you hear the mess on CB and believe that the rest of radio wouldn't be
the SAME way if that happened? Your fellow
hobbiests have screwed up the regular 40 (not all, but enough to ruin it for
any real communica-tions), and now you would like to f*** up the rest of
radio, too? All I can say is, AMAZING!!

I contacted 2 of the Owner/Operator Associations and asked them to publish
the fact that
such is illegal and that FCC has been somewhat active of late in warning
and/or fining truckers
for it.

I suggested the same to ARRL.

I asked a CB Shop owner who publishes a column in a truckers' mag and
website to write a story
about how and why those export radios were illegal.

I visited rec.radio.trucking and posted the fact.

Where I posted the info and proof from FCC's website, I got flamed, told to
go f*** myself, etc.
etc.

Among other things.

All of which is fine. You don't know WHAT I have or don't have. What is
"far" more? Is it "far"
more than a commercial pilot's license (now expired)? Is it "far" more than
Business Management?
Define "far" in the context that you don't know WHAT I have! I just go by
what I hear on that "thar reddio thar". Is there some redeeming value in
talking like a hick? That's what I hear in between those asinine beeps and
squeaks.

The ones who talk like that are the ones who never "grow" out of their
initial efforts to emulate or
fit into ham radio. Unless I am on CW, I NEVER use those words. And there
is no such verb as "to destinate". I have no idea who came up with that
one. Matter of fact, I rarely use 2 Meters.

The monoband frequency range (28-30), the disclaimers about
illegality, and uninformed statements like "designed for those who
need increased RF power transmissions to enable long distance "
suggest it is intended for the illegal "keyclown" market .

> legal or not its an odd way of getting your jollies

As long as a CBer is operating within the 40 channels and even up on 27.555, as long as he isn't bothering me, he will not hear from me. If you camp in my yard without permission, I will take whatever steps I have at my disposal to get you O U T. If you camp on 28 MHZ without authority, I will do what I can to get you O U T. If I decide I want to use that which I have author-ity from the government for, I will use it as I see fit within the regulations that govern my operation.
Therefore, if I happen to alight on 28.085 and there is a trucker there, too bad! If I mess up his talking, too bad. If I DO, the better. He has no business there. Period. But I wouldn't expect a "freebander" to either comprehend nor abide by the rules the reasons for which he simply doesn't understand.

Not only THAT, but if I "happen" to be using 10 meters while driving along the road and hear a trucker and can positively identify him as the perp, then I will record, document, and report said info to Riley Hollingsworth. And if he doesn't like it, he can turn it crossways and shove it! BTW, I am told that that is how the Cheetah driver got it near Rock Hill, SC last summer; he was observed by a ham and turned in. He took the chance, got caught and LOST. Now that things are beginning to come together in Congress with the appointment of people who understand the scope of the problem, I await the day when I hear about a LOT of illegal drivers getting warned, fined, or having their Connexes jerked out of their trucks and dared to operate on 10 again!

So Dwight, how has life been treating you lately? Did you ever find 10 meters? Oh, that's right, you don't want HF privledges, huh? Still using a Mac? Oh, that's right, you are one of those dimwits that have a problem with PC's. Just boggles the old brain, huh? Too mutha fuckin funny! Created any new Voobner sites lately? What a useless piece of human DNA!

Jerry I think what you are doing is terrific, and it's no secret that a lot of cb dealers and cb "techs" read this newsgroup. Visibility of the 10 meter issue in rrcb is very important because if they hear the same messages over and over again, they will soon get the idea, and get word out to their customers and fellow "techs" that 10 meters is not a new expansion of CB. There are people that DO care, bootlegging on 10 meters IS illegal and WILL be prosecuted, despite the propaganda the "10 meter radio" distributors are pushing.

Hey Doc,

Cosmetically a 9+, mentally I'd rate it a 2. I can just picture him now at the keyboard typing that out. With a fish hook hanging out of his mouth of course!

He gets an "e" for effort.

Tell me about it! Once jammed some dyke who sounded like Tokyo Rose,
was telling her lover about stuff like peeing sideways onto the wall,
etc... so I cut in and said "ugh, I'd keep that to myself if I were
you!" The crazy broad started giggling... apparently she found her
"3-way" very amusing. Apparently some women get very hot by playing
with pee & poop... but I digress.
>
> Have you ever held the dial tone or not let them hang up?

I don't think it could be done with a simple DTMF mike... mostly I
made them mis-dial phone numbers, and mis-entered a few credit card
numbers of callers buying stuff. I guess if you'd really wanted to do
some down-&-dirty dial-tone hacking, you'd have to spring for one of
Ramsey's Tone Grabbers.

> >girl asks customer what toppings he wants on >his pizza, I cut in and
> said "all the sh**"... girl >says "EXCUSE ME???"
>
> Hahhahaha!

That's nothing---even nailed a handful of celeb sound-alikes. I've
heard callers who sounded like dead ringers for Jackie Mason, Pearl
Bailey, Tommy Lasorda, and Desi Arnaz. Sometimes girls would scream
and gangbangers would get PO'd, threaten me, etc. (newspaper headline:
Gang Member Sentenced To Year In Prison For Shooting Telephone. Only
in Kalifornia...)

One of my favorite conversation starters was the belch. I'd drive
around chugging a can of soda, key down and let one rip when I saw it
coming in on the S-meter... "Pearl Bailey" blamed it on the other
caller: "you got some BAD GAS, woman!" Likewise, "Jackie Mason" tells

his other caller "yousoundlikeyouhadagoodhotdogorsomething". And some surfer guy squealed "DUDE! That TOTALLY wasn't me!!!" And a very stoned college-age woman could only manage to make unintelligible blurting noises.

In the case of "Desi Arnaz", I was out of soda... so I told him "hey dummy! Your phone's a piece of junk!"
Desi: "Who ees THAAAAAT?"
Me: "It's none of your business."
Desi: "EET'S NONNA YOUR BEEZNESS TOO!!!"
>
> Yea, but the FRS radios are a playground at ballgames, amusement parks,

LOL---knew another ham, Glen, who used to do that---he bought up old Motorola business walkie-talkies at liquidations, but he'd have fun using them to torment local construction crews a little before converting them to ham bands. Then when they made a fuss, he'd tell 'em to shut up and do their job.

Guy

if cb'ers have f*cked up cb radio so bad how do you explain the quiet bands and peacefull situation at night time? i think its more mother nature and the skip cycle doing it than anything else. in two years when the MUF is lower than 20 megs on most days will you still be tirading about all this and chasing truckers on the highway or will you focus your energy more on cleaning up 75 and 20 meters?

have.
> Keeps the country going . Where ham SOMETIMES helps in an emergency. So
use
> a small amount of logic, who is playing on the radio, and who is useing it
> to help keep the country operating?

Yada, yada, yada, I've heard this self-important drivel about how trucks are
sooooooooo
freakin' important. There's NO one that's not replaceable. What matters
here is NOT what
truckers think.

Enough examples have been presented about what drivers talk about while
going down the road.
They talk about "dumb" 4-wheelers, the girl who is suppposedly got her dress
hiked up to the ying
yang, the girl in the red Corvette, yada, yada, tan fer, driver. Oh sure,
there are lawyers driving trucks, but one has to wonder why.

The importance of trucks is not relevant to the issue here. The fact is,
operating on ANY radio
frequency other than CB without a license (and FRS/MURS) is illegal.
Period. The law is the law.
And no matter WHAT truckers t'ink about it, their illegal operations are
going to come to an end.

Amateur Radio, despite your assertations to the contrary, occupies quite a
high "rung" in the realm
of emergency operations. That is why Amateur Radio will get an exemption
from local CC & R
restrictions against antennas; CB radio won't. It is why Amateur Radio
RACES and ARES has a
desk in most state and local Emergency Operations Centers; CB Radio does
not. Even REACT
is a very small presence in EOCs by comparison. And it is why Amateur Radio
WILL get protection from lawless truckers who think that their cowboy boots,
hats, and thick billfold chains somehow makes them a "legend" in anything
but their own minds! Every day, there are safety nets
that run for hours on end to see to the safety of boaters and ships at sea.
Like the Maritime Net on 20 Meters whose operators have saved hundreds of

lives. An example is the Dutch family whose
yacht was attacked by pirates off Yucatan (?) a couple of years ago. The
son recently left a Florida hospital after recovering from his wounds. It
is why Amateur Radio was exempted from PL-106-521 (local enforcement). On
and on, Amateur Radio gets concessions and exemptions
in recognition for its value to the Nation. I see NO national accolades or
antenna laws being passed in recognition for CB Radio's contribution to our
wellbeing. Truth is, most CBers do not
have the training or dedication to such activities that hams have shown for
nearly 100 years. If
CB were wiped from the face of the earth (not about to happen, nor am I
advocating such), there
would be not a ripple since cellphones, computers, MURS and FRS radios have
become available.
Amateur Radio, OTH, WOULD be missed because hams have proven for all those
years the value
of their training, knowledge, their rapid response and frequency agility as
well as the ability to pass
traffic accurately, dependably, and speedily. Over and over and over again.
Amateur Radio has
a tried and true message handling method that works. CB radio does not.
Sending a message across country via CB would be like playing the old game
of "gossip" where a message is whispered to one player and relayed thru
many others until it reaches the other end of the line. Invariable, the
message is different when it gets to the last one! I would truly hate to
depend on
emergency traffic getting thru accurately via a chain of untrained,
undisciplined, and unknowing
CB ops who have never been required to prepare for such a contingency. They
have no standard
message handling method whereby messages can be routed by priority and
checked for accuracy.
And, finally, it is why the hams have all those bands and frequencies that
the CBers would just love
to pollute and trash with their amps, tricked out "reddios" and garbage
lingo (f***this and f*** that). Ever wonder why CBers didn't get that awful
155 mile limit lifted?

But Amateur Radio WILL be defended. You can bet on that, bud. Them's da
facts.

And why in the FEMA manual it states that ham radio operators
should be considered for use in emergency situations for providing
communications, but no mention of cb radio.

Tim this is what you said,

"if cb'ers have f*cked up cb radio so bad how do you explain the quiet bands
and peacefull situation at night time? i think its more mother nature and
the skip
cycle doing it than anything else."

I say it is quiet from Lack of interest, skip just creates more noise and
more people talking together on the band. Not really much to elaborate on.

I have an idea. How bout jerry , boob, and one or two others here, post their addresses here and on the board at the local truck stop, with some of that "i wiil turn them in" stuff. That way they can truly have a part in all this. Now we know that they would not fear doing this as they will have big j to beat up those nasty truckers. Eagle claw indeed .

Perhaps you would like to find me a few lawyers who are driving trucks then I will ask them, round these parts if you are a lawyer you have no need to drive a truck if you have to drive a truck then you ain't no damn lawyer. Glad you enjoyed the changing of your name I thought it was more fitting. How would you like for me to back up my position? (confused) Are truckers supposed to be scary or what LOL. Most people who drive trucks don't have formal educations, it is a job that requires a warm body and someone who can back up a trailer, I know some drivers are educated and just like the open road compared to the confines of an office but those guys are very far and few between. These guys aren't building rockets just take a listen to channel 19 sometimes. I am not saying they aren't hard working guys who provide for their families.

I have another idea how about you post your name and address and we will post it in mens restrooms at these same truck stops. LOL Do you really think all truckers are nasty and mean ? you seem to have this preconcieved notion people are to fear truck drivers. the only reason for this maybe the redneck, low class, cowboy boot wearing look to them.

You might consider MURS. No license is required and the radio prices
are reasonable. You can use an 8 foot marine antenna if need be and
it can be mounted almost anywhere in an apartment (inside or out.)

Before I put my antenna (MURS) up I tried a range test with it laying
about 3 feet off the floor (bottom floor room) and oriented
horizontally. I got an easy 5 miles talking to a mobile with a 5/8
wave antenna.

GMRS would work with just hand helds if you could find a local
repeater. I can talk house to house at 3.35 miles with a couple of
Pryme PR-460 hand held radios using their stock duck antennas.

Mike

UNPLUG ANYTHING WITH A MICROPROCESSOR FROM YOUR HOUSEHOLD WALL OUTLETS!

As you know, since the deregulation of energy, your household 115V electricity MAY NOT come from the same sources it used to! Your electric company is free to buy and sell electricity on the open market as they please. Today we have just learned, that in a few major cities the electricity purchased has been found to contain a secret digital subcarrier on it that when executed, is a destructive computer virus! Because of the way the national power grid is set up, it is virtually impossible to trace these particular blocks of electricity back to their source or sources in the US.

PLEASE!! As soon as you read this, quickly unplug ANY computers and household appliances that contain microprocessor chips from their wall sockets until we can somehow locate the source of the subcarriers and put an end to it. This will include things like televisions, VCRs, radios, home entertainment systems, answering machines, cordless phones, digital clocks, and digital thermostats.

You may ONLY charge your cell phones using a car adapter. Do NOT charge them with standard wall chargers, or the virus could be spread using cellular phones calls as well. Major appliances manufactured in the past 20 years including refrigerators, washers, dryers, microwave ovens, electric ovens, electric stovetops, and even gas appliances that have digital clocks, timers, and controls built in them ARE ALL VULNERABLE!. (Backyard, gas bar-b-ques have been declared safe to use.) If you are at all unsure, UNPLUG IT!

We cannot stress enough the extreme havoc this virus will cause if not stopped in its tracks! It will spread from house to house and community to community if not stopped. This is why we are urging EVERY CITIZEN to do their part by unplugging ALL intelligent household appliances NOW! Tune in your battery operated AM radio to an Emergency Broadcast station and listen for the official "ALL CLEAR" announcement. If you don't have an AM radio, GO BUY ONE with a LARGE box of batteries. PLEASE, DO NOT PLUG ANYTHING BACK IN UNTIL YOU HEAR THE "ALL CLEAR" ANNOUNCEMENT FROM THE EMERGENCY BROADCAST SYSTEM!!

Start with YOUR PC and MODEM *FIRST* General Johnson Jameson!

You may have a problem with simple handheld radios, with no outdoor antennas. Remember that these radios are line-of-sight. If you can see your mom's place you can probably make the connection with little problem. If there is much in the way (lots of trees, hillside, buildings, etc.) you very well may need to add an antenna and/or a repeater system.

A 1/4 wavelength antenna form GMRS is just under 6 inches long, so it's nothing like a CB antenna.

With GMRS you have a fair number of options in that you can use Base units with up to 50 watts and outdoor antennas. You can also use either a simplex (~$100) or a duplex (~$2,000) repeater system, so depending on how much money and effort you want to invest you can make a GMRS system work for you.

If you can borrow a set of FRS radios, you can do a quick check on the need for additional equipment as these have near the range (~2/3) of handheld GMRS radios. If those don't work, you will need to try a full blown GMRS radio with detachable antenna (~$150-$200) and an external antenna (~$50). You can try the external antenna inside your or your mom's location but it will probably require an elevated (roof) outside location. What you are trying to do is get the two antennas to see each other.

If that doesn't work you will need to go the repeater route. While a simplex repeater is significantly less expensive, it has less power and is mainly used for the occasional, short discussion. If you want to hold a normal discussion with your mom the duplex repeater system is best. The repeater system basically adds a third, in-between antenna which can "see" the other two.

You can purchase both new and used for such a GMRS system.

You will only need one license ($75) for your system, not the two as another had noted.

If you are still interested in pursuing this, give us some more information and we'll see what we can do.

Good luck

You probably only need one external antenna on the house in the valley
since the hilltop location has the height advantage.

Mike, I'd like to thank you personally for the wonderful advice you have supplied. After I read your post I immediately went outside and took a large axe with me. The 220 volt lines to my trailer fell quickly from the repeated blows of the razor-sharp double-edged wood axe. A small fire erupted near the charged wires but I soaked it good with the garden hose and got one hellava shock.
Apparently water conducts electricity very well!

After the local utility company restored power, I quickly checked for new viruses on my trusty C-64 and found NOTHING. The VCR, DVD and clock-toaster all seemed functional, I'll check them when the sun comes up and it is safe to go outside.

Good work soldier!

Respectively

>you mean the king of critique only has that to say?

Ok, you want a verbose analysis?

First off you need to realize that the intended purpose is as a CB amplifier, as if that wasn't obvious already. With that in mind, the pre-amplifier is effectively useless, doing nothing other than making the noise floor louder. (Preamps are very useful with radios that have weak receive, such as older, antique radios and homebrew receivers; for modern radios that can pick up a mosquito farting at forty paces they are nothing but overkill.)

Now Brian knows that I am no fan of using the same relay for both input and output, but at 1200 watts output through one contact and 1-5 watts input on the other, that's just plain scary! I also see that there is no DC isolation of the input, which is very important so you don't nuke the final of your exciter if something goes wrong (with either rig).

The power supply: Series connection of diodes isn't a very good idea without a parallel voltage divider (=especially= in a voltage multiplier circuit), and resistors should also be used to balance the current in any parallel semiconductor load. I see the lack of them as a real possibility for failure. Since the power supply is unregulated, it would also be a good idea to have some sort of spike or surge protection on the transformer primary.

Now for the amplifier: Notice the use of the triode configuration of the sweep tubes, and that they are used as grounded-grid amplfiers. If there was no bias supply (just a grid leak resistor and cap) the tube would be working as a Class C by the very nature of grounded-grid operation. This is because grid current flows for half the cycle, effectively pulling the grid negative all by itself. So if you want linear Class AB or B then you need a grid supply with very good regulation. A simple half-wave rectifier and RC filter isn't very good regulation. But here's something even more interesting: only the grid is biased, not the screen/suppressor that should be part of the effective grid. The result is that this amp could indeed be running Class C; if I'm wrong and it really does run Class AB2 then it will be doing so with considerable distortion because of the poor regulation of the grid supply. Grid-current distortion is going to be prominent in AB2 unless the grid supply can be adjusted so grid current is flowing for more than half the cycle -- which, of course, isn't a good

condition at all because the plates are going to turn a nice shade of vermillion. In order to avoid this the plate voltage must be reduced in order to reduce the plate current, which isn't likely after seeing that they use six plate caps.

After that, I see that these amps have only a pi output filter. This does little for harmonics, and should be followed by a non-resonant low-pass filter. To not include the LP-filter in the design when it's required for proper operation is a decision based solely on profits, and not on good engineering concepts and practices.

So I can say, without any doubt or hesitation in my mind, that this is a noisy amp, and somewhat prone to failure by a couple design flaws. It seems that if they put as much effort into designing a proper grid biasing circuit and power supply that they put into designing the preamp, this might be a really good unit. It would be an even better amp using -real- triodes instead of sweep tubes kludged as triodes. The advantages? The amp -does- have three different power indicators, more buttons and knobs than a typical amp, and a cheap price tag. So it's perfectly suited for it's intended market.

CH 5T means it's the Transmit crystal for Channel 5. The one marked with the frequency and MC T 18 is going to be the transmit crystal for Channel 18. Yes, it's as obvious as it sounds. But it's still a good question, because some crystals are only marked with a frequency. The transmit crystals will be marked with the frequency of the channel; i.e, 26.965 for Channel 1, 27.085 for Channel 11. Most radios used the same transmit crystal frequencies.

The receive crystals, OTOH, will be marked for a frequency that is different. This frequency is based on the IF used by the radio, which is different for different radios. The Messengers and Heathkits used an IF of 455 kHz, the Raytheon TWR-2 was 6 MHz, the Hallicrafter's, Lafayette's and TWR-3 used 1.65 MHz as the 1st IF, etc. So you might see a crystal that says R-11 on it, but it might not be for your radio: the R-11 crystal for the Raytheon TWR-2 is 33.085 MHz, which certainly won't work in your radio.

I am not certain, but I believe that the Messenger II used crystals 455 kHz above the channel frequency; so while the frequency for channel 19 is 27.185 MHz, the receive crystal will have a frequency of 27.640 MHz. You can verify that by plugging in a 27.640 MHz crystal into a receive crystal socket and you should hear channel 19.

I just bought 9 crystals for my Johnson viking messenger, white face, most of them are marked with numbers like 27.175 MC T 18, I assume that indicates the frequency of the crystal, 2 only have somthing like CH 5T on them and thats it. Is there anyway to know what channels these crystals will give me before intstalling them in the radio??

Thanks,
Jason

BTW, it hasn't been posted for awhile, so here's the channel chart:

1 26.965
2 26.975
3 26.985
4 27.005
5 27.015
6 27.025
7 27.035
8 27.055
9 27.065
10 27.075
11 27.085
12 27.105
13 27.115
14 27.125
15 27.135
16 27.155
17 27.165
18 27.175
19 27.185
20 27.205
21 27.215
22 27.225
23 27.255
24 27.235
25 27.245
26 27.265
27 27.275
28 27.285
29 27.295
30 27.305
31 27.315
32 27.325
33 27.335
34 27.345
35 27.355
36 27.365
37 27.375
38 27.385
39 27.395
40 27.405

It certainly IS a "problem". Anytime someone tresspasses on another's property, it's a problem. Whether that problem ranks high up on the list in the big picture of spectrum management, is a subjective call, that no one here has the power to make.

Is it "epidemic"? Probably not. Is it something we should be concerned about? That depends on how you view the value of rules to a cohesive society. If you view rules and regulations as roadblocks in your path of "fun", then I'm sure you would rather attention not be drawn to this "issue".

> Cb is slowing down, slowly but surly, because of
> cell phones IMO.

I would agree with this 100%. Add to it the internet, and you've got most of the big picture.

> Go take a look around the neighborhoods,
> do you see as many antennas now as you might have
> 7 years ago?

Heck, the amount of antennas on both vehicles and homes has declined in my area since about 1982.

> Probably not, when you can get a cell phone
> and its use for $9.95 a month, why would you want to
> spend $40.00 for a cb?

That's not a really good example. A CB would pay for itself after a few month's usage. I don't know about you, but I got into radio as a hobby, because I enjoy the hit or miss aspect of radio. I look at phones as an appliance. Handy, useful, but not something I would make a hobby of. I've had people question my choice of hobby, and pose the obvious question as to why I bother with all those radios, when you can just get a cell phone. My usual answer is that I guess if you don't get it, you don't get it, and are much better off with that cell phone.

> Cell phones are far more reliable and way more private.

For a true radio hobbyist, privacy is a negative. One thing you can't do with cell phones, is get a bunch of people together and rag chew. It's point to point only, or maybe a 3-way calling option, but nothing more (Unless you want to pay really big bucks for conferencing abilities).

As far a reliability, yes, most cell phones are somewhat reliable, but as redio devices, they are still subject to fade outs and poor signal areas. Murphy's law on cell phones: The phone will quit when you need it the most.

I used to use the line "have you checked the children?, from one of
those old horror movies, who's name escapes me at the moment.
Surprisingly, at even 100 watts of power, I was either ignored or unable
to get over the monitor's transmitter. I never got much reaction from
baby monitors.

I once drove a girl totally bonkers. She was evidently a borderline
paranoid, who thought that the government had tapped her phone. I'd say
something like "Boo!", and she'd freak. The person on the other end
couldn't hear me, and told her she was nuts. She then handed the phone
to her boyfriend/husband, and he "demanded" to know who was on the line.
I kept quiet. After mouthing off some macho threats, he then gave the
phone back to the girl, and I promptly said "Boo!" again. This went on
for a few minutes until she couldn't take it anymore and hung up. It's
alarming just how many unstable and borderline mental patients live in
the world.

>

I used to use an old 49/1.7 Mhz phone back then. This was before the days of "security access codes", when you only had to transmit a tone signal to bring up the phone line's dial tone. Tapping the output of the phone into the amplifier section of a 10 watt 6 meter rig, and using the gain of a 3 element beam, would allow me to bring up phones miles away (most of which I could not hear the return on 1.7 Mhz) I used to dial my own number to see if it was really working.

I find more entertainment in listening to people (Spying for twisty). You learn alot about the way people think by how they conduct themselves. One of my old neighbors was cheating on her husband, and used to talk "dirty" to her "boyfriend", while her husband was in the next room. I was waiting for the fireworks to erupt one day, but she moved out before anything really interesting happened. The poor husband didn't have a clue why the girl was acting so "funny". I guess if he payed more attention to her instead of TV sports, he might have gotten a hint. I was so tempted to clue him in, but I would have had to reveal how I knew, and I didn't want to open that can of worms.

I've done that a few times too. It's good for a few laughs.

Such was the fun of younger days. I haven't played with cordless phones for probably 15 years now. I still listen occasionally, but I don't try to jam them any more. That's just not right. Old age does funny things

to your conscience.;)

FRS radios are fast becoming the "new" CB. There are tons of mostly kids playing with them in my area. I'm lucky that I live at a 400' ASL location, and I can hear them for farther than the usual published 2 mile range. Occasionally I'll hear some interesting adults, but mostly they just want to talk to themselves, and not socialize. I'm hoping this will change..

> it can be mounted almost anywhere in an apartment (inside or out.)

MURS or GMRS should both work (especially if you can use an external
gain antenna at one or both sites - preferably both).

Here are a few advantages of MURS which you might want to consider:

1) GMRS requires an $80 license fee (for 10 year license). MURS is
licenseless(free).

2) With GMRS, you are limited to talking with individuals in your
immediate family only (or other GMRS license holders). With MURS, you
can talk with anyone else with a MURS radio.

3) If you are going to set up an external antenna, it is generally
cheaper to do so with VHF MURS, as feedline losses at GMRS UHF
frequencies can become significant if your coax run length exceeds
much more than 30ft. With MURS, you can use cheaper RG-8 cable,
available off-the-shelf in fixed lengths at Radio Shack - with GMRS
you should probably use a more expensive custom-built solution using
LMR-400 cable(or equivalent).

- Stewart

>I don't think anyone is in denial about it, most >know that people do those things. It's the >constant posting that is a "problem" or like it is >an "epidemic" when it's not.<<

>It certainly IS a "problem". Anytime someone tresspasses on another's property, it's a problem.<<

Dave, have an upperclassmen teach you about frequency allocation. The spectrum belongs to no one, despite your heavy wishing....even the FCC admit this. You may rent it, but it by no means is yours, and never will be anyones "property." The simplest of concepts are lost on you......a non no-code. Maybe they should have refresher courses for stale hammies with erroneous information....

>Whether that problem ranks high up on the list in the big picture of spectrum management, is a subjective call, that no one here has the power to make. <<

HTF do you know? Oh, excuse me, you were telling fortunes again, my mistake.

>Is it "epidemic"? Probably not.<

No one here is qualified to make an observation on that matter except you,,,,riiiiiiiiiiiight!
Talk about total contempt for others.......

>Is it something we should be concerned about?<<

Let us clarify,,,when YOU say "we", it refers to "Aaron's" named group of
yourself (N3CVJ), Frank Gilliland, Lelnad C. Scott KC8LDO, N8WWM Dogie Adair, and sometimes George Busch, depending on his mood-for-the-day. When anyone else says uses the term "we", it refers to the rest of society and the world-at-large.

>That depends on how you view the value of rules to a cohesive society. If you view rules and regulations as roadblocks in your path of "fun", then I'm sure you would rather attention not be drawn to this "issue".<<

You haven't been "sure" about anything. "Your" society consists of socialism, insults and
calling names to those that hold a differing view. Go right ahead and continue to attempt to draw what you feel is "attention" to any damn thing you want.......it's not like you can do anything anyway....you're i-m-p-o-t-e-n-t!!!!!!!!!!

All this from twistieboy who operates in violation of FCC rules
and can't even qualify for a no code license. Spin it anyway you
want twistieboy, the truckers and other illegal morons (oh, did I
step on your toes?) are using 10 illegally every day.

Good grief you moron, anyone in any part of the country can hear these idiots. When I was in Texas I heard them all the time as well. Now I am 700 miles to the northwest and I hear them. It isn't in just my part of the country. You must be kin to dickieboy crainumless. I am listening right now and 28.085 busy with trucker traffic. You and dickieboy get together and see if you can figure out how to listen on 10 meters.

"Bring me a bottle" coming from a baby monitor in a child-like voice has
brought a chuckle or 2 over the years to some as well.

>Never had much luck jamming baby monitors, though I did manage to make
enough racket that the mother pestered the dimwit dad to come in the
kid's room & pick the thing up... he said "duh, I don't know what's
wrong with it".
<<

Those things are all over in this area around 48 to 50 MHZ (not certain
of thier exact freq)

once you came home and a person of, ..uh..a.VERY different sexual
persuasion would witness one moving the cones and parking their car
where the cones used to be,,,,,a pretty funny song and dance could
occur.

>Tell me about it! Once jammed some dyke who sounded like Tokyo Rose,
was telling her lover about stuff like peeing sideways onto the wall,
etc... so I cut in and said "ugh, I'd keep that to myself if I were
you!" The crazy broad started giggling... apparently she found her
"3-way" very amusing. Apparently some women get very hot by playing with
pee & poop... but I digress.<<

Dayummmmmmm.....................now that is definitely someone who
would have reacted to being taped...hehehe! Then again, maybe not.

Have you ever held the dial tone or not let them hang up?

>I don't think it could be done with a simple DTMF mike... mostly I made
them mis-dial phone numbers, and mis-entered a few credit card numbers
of callers buying stuff. I guess if you'd really wanted to do some
down-&-dirty dial-tone hacking, you'd have to spring for one of Ramsey's
Tone Grabbers. <<

:)

>girl asks customer what toppings he wants on his pizza, I cut in and
said "all the sh**"... girl says "EXCUSE ME???" <<

Hahhahaha!

>That's nothing---even nailed a handful of celeb sound-alikes. I've
heard callers who sounded like dead ringers for Jackie Mason, Pearl
Bailey, Tommy Lasorda, and Desi Arnaz. Sometimes girls would scream and

gangbangers would get PO'd, threaten me, etc. <<

This is getting funnier by the post.....I'll betcha a collection of,,,uh,,,,more colorful incidents such as we are describing would sell at the swamp, er,,I mean swap meets, keydowns, breaks, even at the sacred shrine..ummm, I mean hamfest in Dayton, despite it's content.

>(newspaper headline: Gang Member Sentenced To Year In Prison For Shooting Telephone. Only in Kalifornia...)
One of my favorite conversation starters was the belch. I'd drive around chugging a can of soda, key down and let one rip when I saw it coming in on the S-meter... "Pearl Bailey" blamed it on the other caller: "you got some BAD GAS, woman!" Likewise, "Jackie Mason" tells his other caller "yousoundlikeyouhadagoodhotdogorsomething". And some surfer guy squealed "DUDE! That TOTALLY wasn't me!!!" And a very stoned college-age woman could only manage to make unintelligible blurting noises.
In the case of "Desi Arnaz", I was out of soda... so I told him "hey dummy! Your phone's a piece of junk!"
Desi: "Who ees THAAAAAT?"
Me: "It's none of your business."
Desi: "EET'S NONNA YOUR BEEZNESS TOO!!!"<<

I'd be blowing that soda through my nose at about that time...

Yea, but the FRS radios are a playground at ballgames, amusement parks, camps, etc.....even on the highways.....you CAN relive the glory days..lol!

>LOL---knew another ham, Glen, who used to do that---he bought up old Motorola business walkie-talkies at liquidations, but he'd have fun using them to torment local construction crews a little before converting them to ham bands. <<

I haven;t given the construction sites a thought.....bet they don't all use them old-time Motorolas like they used to now that the price is lower on everything else....easy way to find out though.....can't even see the Gulf anymore 'cause of all the damn condos going up all the time.....gonna have to check it out!

>Then when they made a fuss, he'd tell 'em to shut up and do their job. Guy<<

LOL! Tell 'em "I'm the owner of the company dammit and I'm watching you from my condo window with binoculars,,,,,now quit goldbricking and stop yelling at the girls on the beach...."!

Oh, so if I "snitch" on a person who sneaks into my yard and steals my
lawnmower, that's not OK?
If a wrong is committed and I see it, then I am not to report that wrong?
You can obfuscate til
Hades springs a leak, but it IS the same thing. Trespassing on someone's
property is wrong. Tres-
passing on frequencies for which the perp has no authority is just as wrong.
If the illegal op gets into trouble because someone saw him, then he has
only himself to blame. Not the so-called "snitch".

Why don't you try camping in somebody's yard and see if they don't run you
off--or call the cops to do it. Some people might even resort to a load of
rock salt in a 12 gauge.

Ok, so there is activity in your
part of the country. Now & then I've
heard non hams on those freqs out
here, but not as prolific as you and
others are trying to paint.
Just like a couple others on this
board, you keep being repetitive about
the same thing most will just ignore what's
being said.

Agreed, but remember, CB was originally created
as a common way of two way communications, it was
not meant to be a hobby, that was left to a Ham License.

>Handy, useful, but not something I would make a hobby of.

I don't think a cell phone as a hobby. I do think that
the CB was and still is marketed as a cheap form of
2 way communications. Now that cell phones are
cheap, it will have to marketed as something other
than that.

I used to use the line "have you checked the children?, from one of
those old horror movies, who's name escapes me at the moment.

I think it was Price or Legosi (sp?)

Surprisingly, at even 100 watts of power, I was either ignored or unable
to get over the monitor's transmitter. I never got much reaction from
baby monitors.

>I once drove a girl totally bonkers. She was evidently a borderline
paranoid, who thought that the government had tapped her phone. I'd say
something like "Boo!", and she'd freak. The person on the other end
couldn't hear me, and told her she was nuts. She then handed the phone
to her boyfriend/husband, and he "demanded" to know who was on the line.
I kept quiet. After mouthing off some macho threats, he then gave the
phone back to the girl, and I promptly said "Boo!" again. This went on
for a few minutes until she couldn't take it anymore and hung up. It's
alarming just how many unstable and borderline mental patients live in
the world.<<

With your background or hobby you know that classical music is
reportedly heard by many
"schizos".....you probably could have achieved the same effect with
an easy listening
station, playing it only when you knew only she was listening.

>I used to use an old 49/1.7 Mhz phone back then. This was before the
days of "security access codes", when you only had to transmit a tone
signal to bring up the phone line's dial tone. Tapping the output of the
phone into the amplifier section of a 10 watt 6 meter rig, and using the
gain of a 3 element beam, would allow me to bring up phones miles away
(most of which I could not hear the return on 1.7 Mhz) I used to dial my
own number to see if it was really working. <<

HEhehe..yea, there were some interesting things done with cordless
telephones.....but I definitely would have found how far I was able
to achieve this type call...and then try for more distance each time.

>I find more entertainment in listening to people (Spying for twisty).
<<

<g> Hey, eavesdropping on certain conversations has been held an
electronic form of spying which is one reason why we can't legally
receive the cell band on scanners in the US of A..

>You learn alot about the way people think by how they conduct themselves. One of my old neighbors was cheating on her husband, and used to talk "dirty" to her "boyfriend", while her husband was in the next room. I was waiting for the fireworks to erupt one day, but she moved out before anything really interesting happened. The poor husband didn't have a clue why the girl was acting so "funny". I guess if he payed more attention to her instead of TV sports, he might have gotten a hint. I was so tempted to clue him in, but I would have had to reveal how I knew, and I didn't want to open that can of worms. <<

Aw, come on......a hammie that didn't think to tape what he heard? C'mon, now!!!!!

>Such was the fun of younger days. I haven't played with cordless phones for probably 15 years now. I still listen occasionally, but I don't try to jam them any more. That's just not right. Old age does funny things to your conscience.;) <<

It ain't the conscience, it's the wisdom that youth runs from.

>FRS radios are fast becoming the "new" CB. There are tons of mostly kids playing with them in my area. I'm lucky that I live at a 400' ASL location, and I can hear them for farther than the usual published 2 mile range. Occasionally I'll hear some interesting adults, but mostly they just want to talk to themselves, and not socialize. I'm hoping this will change..
Dave
"Sandbagger"<<

Check out Hershey or Storybook Forest or even tourist areas around Philly or Lancaster. Betcha hear more than kids...adults LOOKING for the kids.....I have noticed many feel it is in place of a cb on the interstates and turnpikes.....funny as hell that many of them feel their conversations are somehow private.

>SNIP<

Well, this is confusing. As hams, are my wife and I "limited" to talking to each other "(or other ham license holders)"? As GMRS and ham licensees, I wasn't aware that talking to other license holders was a limitation.

Louise and I go to events where FRS is unuseable because of all the users on every CTCSS on every channel. With GMRS we may find another couple of users, but it's generally silent except for us. And we can talk to anyone else with a GMRS radio, although generally that's considered impolite, and to anyone else with a ham radio (which is not considered impolite).

MURS may well be even less used than GMRS at this time; however, it may become the new FRS with attendant crowding since it is license-free.

While your post is generally correct, I take issue with your point 2.

> So now we get down to it. The law is the law

That's about it. Bottom line is if you and I were operating on, say,
28.305, and you don't have the
license and if an FCC agent were listening, YOU would be the one receiving a
warning. I wouldn't
because I confine my operations to the parameters of my privileges. I
wouldn't be talking to you
(unless you were pirating a call), so, again YOU would get the
warning/NOV/NAL, or whatever is
warranted by the situation. If it were not a matter of law, then you would
be able to operate the way so many CB types want to be able to do--and mess
up every part of radio they could with their splatter-boxes and tricked out
reddios complete with "swang". Those laws and rules you disdain are there
for a very good reason.

Frank was told: Not currently in use by the FCC, I was under the impression it was, but the current FCC "Industrial Business Pool" Licenses are now grouped under the "IG" designation. I used the label to describe legal Industrial Business Pool Licenses within your magical 25 to 34 Mhz window, of which are allowed modest (when compared to other services) or higher (vs CB) power operation which might require the use of an rf amplifier to transmit at ther full authorized limit.
  So did you research any Industrial Business Licenses to see allocations within your area of contest that are allowed higher power..? What did you find dear boy..? Yeah... there are some What a concept...
--
>I'm familiar with several of those licensees (IG between 25 and 34 MHz). I work for one of them and use the service under their license. That's why I know you are wrong.<<

Tut tut, now Frank. That is NOT what you claimed last time this discussion buried you. You claimed you would contact some of these businesses and post the results here to prove me wrong. ....only you learned a great deal about frequency allocation when you made the calls. Your venom for me at least educated you on that area of spectrum where you now at least have an idea of what is taking place as opposed to your earlier posts on this matter.
The only one wrong is you.

qsy
to
the qrg and destinate on over the local machine for a little ragchewing
with
the other professional sounding stations.

--
The ones who talk like that are the ones who never "grow" out of their
initial efforts to emulate or
fit into ham radio. Unless I am on CW, I NEVER use those words. And
there is no such verb as "to destinate". I have no idea who came up with
that one. Matter of fact, I rarely use 2 Meters.
J

Some of them fellas that "never grew" are older than you, Jerry. Some
may even have been friends with Edison. It is division like this that
just sucks. You know I am not one to jump your azz, but when you're
wrong, you're wrong. Bitching about another hammie 'cause of his dialect
or accent is childish and unproductive and non-conducive to hammie
radio.

> a freeloader.

It would seem that this pseudo-ham who is so all-fired concerned for the
welfare of
those "pore" old truckers has a vested interest in maintaining the status
quo. Could it be that if FCC were to aggressively quell the activity, they
just *might* catch him, too?

As to "balls", I have already confronted several managers of Flying J and
Pilot Travel Centers and
pointed out that some of their wares are illegal--right in front of truckers
who were at the CB counter. One of those stops is at Exit 70 on I-20 (US
321 Exit) in Columbia, SC, another one is
at Dale Earnhardt Blvd (Pilot) and I-85 near China Grove, NC. There is
legal work being done at
FCC right now to hit these outlets (again) and hit 'em hard. I got that
direct from Mr Hollingsworth
via phone. You can look for those companies to be fined soon, according to
RH.

You know, I've said this before, but your minimizing this issue, your lack
of understanding of the
reasons for rules and regulations, and your promotion and support of such
activity will only help to
fuel the fire now being kindled to abate such intrusions. And it will bring
upon lawful CBers hardship and even more regulation than before. It *could*
even cause the sunsetting of CB on 27

MHZ eventually, leaving only FRS and MURS. All because some people think th
ey have a "right" to 'tawk on this h'yar reddio', and to do so in any band
they please without regard to the legal, rightful, and assigned use of said
band or frequency. NONE of us have a "right" to use a radio; it
is P R I V I L E G E granted by the government predicated on the user
following established rules
for the service. CB operators have their 40 channels, but NO! That isn't
enough. Ya just gotta have yours and everybody else's as well. Finally,
something will be done about it.

: Your answer was "I don't know and I don't want to look". Except YOU
: made the statement that 6146's were used as sweep tubes -- back it up!

You really need to get off the decafe... If you go back and look at the
original text (yes, the one you copied over from an old news group post
has it), you will clearly see my actual reply (the text writen by me) does
not make that statement.
As I mentioned many times to you in the past, the statement made
by another person was included with my comments as a reference for the
post follow up readers.

So do go back and look, its there... even in the partial copy you posted
in one of your previous ramblings. No need to back it up, I was just trying
to keep you from looking the total fool. Notice the > symbols before the
text your so whacked about. The statement your stuck on was not made by
me. Christmas, your like about as bad as boobner...

:>: 2. What make/model amplifier is currently being manufactured in the US
:>: for legal use in any service on any frequency between 25 and 34 MHz?
:>
:>Alpha Power, 99b as currently advertised on their web page. You seem to
:>want to do the boobner hard line dance..?

: And you apparently can't read. It's legal in the US only for amateur
: use and only on freqs not prohibited by 2.185. IOW, you need to find
: another amp.

Now what does your original question above say..? "for legal use in any
service on any frequency between 25 and 34 Mhz?" That's how I and
other readers see it... the question was answered and thats the end of
that. You waste a lot of time proving your a bafoon.

:>: 3. What is the "IB" service?
:>
:>Not currently in use by the FCC, I was under the impression it was, but
:>the current FCC "Industrial Business Pool" Licenses are now grouped under
:>the "IG" designation. I used the label to describe legal Industrial

:>What did you find dear boy..? Yeah... there are some What a
:>concept...

: I'm familiar with several of those licensees (IG between 25 and 34
: MHz). I work for one of them and use the service under their license.
: That's why I know you are wrong.

In your Wed Oct 23 post you state: "There is no IB Service"

You didn't answer my questions Frankie boy... well, let me retract my
above text (about the FCC no longer using the IB Label) and go back to my
original position that IB is a current Industrial Radio Service.
Yesterday I looked at a current FCC Radio Station Licence, Radio Service:
IB Industrial Business and it's good label after all.

But you work for one of them and knew that... of course...

You are wrong.

:>: 4. How is the triode configuration of a tetrode/pentode not like a
:>: triode?
:>
:>The "triode mode" grid to plate connection you described is not used in
:>many/most rf amplifiers, regardless of the tube type. You clearly showed
:>your background example was from the tube audio world and does not play
:>well in rf applications. Your theory is weak in rf... the topic of
:>choice.

: Even if all three grids are tied to ground it's still a triode
: configuration, and operates as a triode. But nice try at side-stepping
: the question -- it's obvious that you refuse to answer it.

No, it's obvious you cant go much past the book front page intro text...
except maybe in the tube audio amplifier section.

Show us proof of any properly designed circuit using all three grids tied
to ground... Show us any RF amplifier circuit with any grid tied to the
plate (as you said they can be), not audio... rf amplifier.

Didn't we just see you dance and sing about an amplifier..?
I believe you used the Swan 1200x as an example in your Wed Oct 23 post.
"Just take a look at the schematic of the 1200-X, the screen and
suppressor are tied to the plate, just like I said."

Well you are wrong buck'o

Your boat is sinking fast boy... your theory is bad news and your
references don't support your statements.

:>: 5. What does "low-mu" describe?
:>
:>Specific to what..? operation, circuit layout, tube type, tube element
:>construction "geometry..?"

: I suppose you think side-stepping won't work twice in a row, so now
: you try and act stupid? Let's make this a multiple choice question:

Any amplifier designer uses all the above when considering circuits. If
you want details, you have to be more specific... your question is very
non specific... should anyone care to answer it, they would need you to
narrow it down. Moving on...

So, if and when you get an answer, where are you going with it the topic?
What point are you trying to make that directly applies to the
original topic..?

****

: The designator 'mu' (greek leter 'micron'), when used in reference to
: the specifications of vacuum tubes, is a label for the amplification
: factor of a:

: A. Diode
: B. Triode
: C. Beam Tetrode
: D. Pentode
: E. None of the above

****

"specifications of vacuum tubes", "type/class of tube", "type of tube
operation", "circuit layout" are all related to the Low mu label. You
wanted a question answered when each sub topic of the above list can take
pages. I call you on that fact, another indicator that your working
knowledge is seriously lacking. I'm just about done answering your dumb
questions... There are hundreds of google web page hits on the directly
related topics of "low mu".

:>: 6. What is the definition of a 'sweep tube'?
:>
:>It is an informal reference to the function of a tube in TV sets. Also
:>used as slang to describe a generic style type of tube used to provide
:>said function. You have a dictionary of Electronics around that you
:>wouldenlighten us big boy..? What's your hard fast answer..? ... and
:>from what reference do you make it..? Was it worth the trouble..?

: Hey, you got one right! Bravo!

Your count is off... quite a bit. But your rf theory is also very weak.

:>: 7. Because sweep tubes are generally beam tetrodes or pentodes, does
:>: that mean every beam tetrode or pentode is a sweep tube?
:>
:>What a dumb question... but since your burning for an answer, No. By the

:>way, the formal label is "Beam Power Tube." If your going to nit pick at
:>stupid issues, don't forget the complete label.

: That's two correct! You're on a roll...

Your count is off, your label was incomplete and you have yet to show
where your going with all this.

:>: 8. How does the linearity of a sweep tube compare to that of an RF
:>: power tube at RF frequencies?
:>
:>Another dumb question. Even sweep tubes not originally engineered for RF
:>applications work very well as RF power tubes. As described by me (and
:>others including the ARRL & W6SAI Radio Handbooks), their comparison is
:>about mute as they are easily able to meet or exceed FCC requirements for
:>such applications. In short, they do the job pretty well for what they
:>are.
:>
:>Many tubes not originally designed for radio rf applications, can and do
:>work in said areas. The horizontal output tube of some tv sets is one such
:>example.

: Bzzzt! Wrong answer. Too bad. But since you did so well on the last
: two questions, I'll give you a chance to look at the EpIp curves of
: both types of tubes and answer this question again. Fair enough?

Again you are wrong and have yet to provide any supporting facts. Lets
have'em boy. What I wrote above is fact and stands on its own until you
can provide clear evidence it does not.

Linearity is not always desired for tubes in RF service... as in
non-linear modes. But sweep tubes do the job well enough to meet and
exceed FCC Spectral Requirements. Doesn't matter if your flying a 707 or
a 747, you still get there.

: Oh yeah, the word is 'moot', not 'mute'. Your voice recognition chip
: might be overheating...

Nope, it's mute just as I wrote it...

:>: 9. Why were sweep tube amps so popular, aside from the price and
:>: availability of the sweep tubes?
:>
:>They are relatively easy to construct... ARRL Handbook projects from the
:>60's and or 70's show a classic 4 tube project. What more are you
:>looking for buck'o..?

: You are suggesting that amps using proper RF tube were more difficult
: to build? Bzzzt! Wrong again! Although the question was intended to

Your definition of a proper RF tube is the problem. Classic sweep tube
amplifiers are pretty easy to build. Simple enough...

: mean production amps, many homebrewers had problems with the sweep
: tube amps.

Many people still don't understand how to properly build them into rf amplifiers. Companies like Palomar got it right in the six tube Palomar 300 circuit. I like to reference portions of it as an exampled of a nicely thought out circuit.

: I remember my Uncle tried one once and he kept blowing tube
: after tube until he finally added enough neutralization to keep it
: from oscillating into smoke. He wasn't the only one, either.

No sweep tube amplifier I have requires neutralization. It's not required in a properly designed AB2 amplifier.

: Homebrewers also had, and still have the problem of grid current,
: which is an absolute no-no with sweep tubes. RF tubes are more
: forgiving in that situation, and with a tuned grid you wouldn't even
: notice it. But with sweep tubes not even a tuned grid with a swamping
: resistor is going to make the crossover much smoother.

Most homebrewers / hams do not have a handle on grid current in SWEEP TUBE AMPLIFIERS. Well, here's where you really lose it. If one does the proper homework, you can research previous posts made by me to the amps group which explain a proper circuit approach to ensure grid current is within limits. I don't need to lay it out a second or third time.

In a proper circuit, I don't have to have any measure of forgiveness in a tube. I understand how it works as applied and can keep the grid within allowed operational values. It's not rocket science, but it's not clearly understood by a lot of people and clearly not by you.

: No, they are NOT easier to construct. The only exception might be if
: the tubes were run grounded-grid, in which case you have to solder
: three pins instead of one (for a factory triode), which is not a
: significant effort.

You are wrong... and clearly haven't built any modest number of amplifiers, else you would know your blowing a lot of poop.

:>: 10. How many sweep tube amplifiers are being produced these days?
:>
:>You going to dance and sing about the next reply..? I would imagine only
:>hundreds. The KLV Italian brand, Ameritron might still be making their
:>unit (but I doubt it). The current rage is to retro fit Dentron, Amp
:>Supply and similar vintage rf amplifiers with the Ruski (Svetlana) type
:>EL-509/519 tubes. I've done my share of them...

: No song and dance. I think you will agree that very few, if any, sweep
: tube amps are being manufactured.

Overall, the number of commercially produced RF Amplifiers are down. The market is keen with competition. That's for all tube types

:>So where are you going with all of this..?

: Simple. If sweep tubes are so great, why aren't they being used
: instead of power tubes designed for RF applications? Because they
: aren't so great!
: BIG DUH!!!

They are... see the KLV brand of amplifiers... tubes in general are
giving way to solid state. Even power tubes designed for RF where
possible. Bigger Duh..!

:> is it just your attempt to try
:>and nit pick..? Are you going to supply us with some magic theory I or we
:>need to read. Do you have a web page somewhere with articles or text that
:>you have writen on the subject..? Do you have civil conversations with
:>people over these topics that interest you..?

: Do you have a financial interest in the popularity of sweep tubes that
: might skew your public endorsement of them away from technical facts
: and into the realm of RF mythology?

Slanted question... there is no mythology here, just some weak theory in
your posts.

:>With the 70's, 80's, 90's wind down of glass tube production, all tube
:>prices rose up and out the window of reason. Only the influx of foreign
:>mfgrs again make similar type tube a practical alternative. Hence, we
:>see new made KLV brand amplifiers for sale again. People buy them...

: Do you sell those amps? Or any other sweep tube amps?

No, but I can build them and explain how they work. From what I see of
your posts, you could not design and build a proper RF amplifier circuit
using any tube. You like to tie the grids to the anode/plate... you
don't understand AB1 and AB2 layout considerations related to rf amps and
you don't prove that you've worked on very many of said.

:>gotta go... it's music night..! yee ha..!
:>
:>skipp
:>
:>ps: try not to be too bitter in your follow up post

: Who's bitter? You got three correct answers (maybe four, I'll give you
: the IB service question), and one that you can do over again. That's
: more than I expected. Actually, I thought you would try and obfuscate
: every single question. But I was only half wrong...

You are more than half wrong... The IB Radio Service is current as
Industrial Business. But of course you work for the industry so you knew
that.

If you can stay on topic, keep your ramblings under control... it would be
fun to go into detail about specific technical issues related to rf or
audio amps. I enjoy the subject and am willing to debate or go over issues
with any person willing to be civil.

Now, watch for my questions for you...

Jerry Oxendine wrote:
Amateur Radio, despite your assertations to the contrary, occupies quite a high "rung" in the realm
of emergency operations. That is why Amateur Radio will get an exemption from local CC & R
restrictions against antennas; CB radio won't. It is why Amateur Radio RACES and ARES has a desk in most state and local Emergency Operations Centers; CB Radio does not.
--
And why in the FEMA manual it states that ham radio operators should be considered for use in emergency situations for providing communications, but no mention of cb radio.
----------Maybe because hammie radio is more reliable as a cohesive service by virtue of regulation?
Go fight with yourself....no one ever stated differently. Jerry feels the need to repost the merits of hammie radio, as if someone were putting it down and he is defending it's use, but both of you are swinging at ghosts.

I'm sure this will become another CB urban legend, along with the "coax has
to be the right length" thing that always goes around.

I have an idea. How bout jerry , boob, and one or two others here, post their addresses here and on the board at the local truck stop, with some of that "i wiil turn them in" stuff. That way they can truly have a part in all this. Now we know that they would not fear doing this as they will have big j to beat up those nasty truckers. Eagle claw indeed .

There was a truckload of cigarettes headed for Kentucky hijacked here the other day on I-75. Newspaper said the guys trailed the drivers from Miami all the way across the state to the Flying J on I-75 between Tampa and Ocala. The hijackers were eventually caught but one of the drivers was shot in the leg trying to escape (he made it) into the parking lot of the Flying J where the hijackers first approached the cigarette truck. Word travels fast. The drivers are not in hospitable mode right now around here.

I believe it was timmieboy nebonehead that kept saying something
to the effect that hams were not good at emergency communications,
it was the cbers that really helped in an emergency the most.
Looks like we hit one of those ghosts...you twistieboy.

All I am saying is there are a lot of truckers and other illegal
ops using 10 meters on a daily basis, the numbers are increasing
daily as these illegal so called 10 meter radios aimed at the cb
market and truckers are being sold. Anyone who claims that they

have listened for the last xx months and only heard one or two such incidents is either plain stupid, doesn't know how to use his equipment or just plain lying.
In just a few minutes of scanning the 10 meter band the other day I found 9 frequencies where such illegal activity is going. And on 28.085 there were so many truckers you could not separate the stations. Now that is just those who are on the band that I can hear from my location, so it only stands to reason that there are many of these illegal stations that I cannot hear, but others can. So this crap about it isn't a problem is just that, crap.

Well dave someone should call up CC Hammer in the Mohave desert and tell him he cant get out on that piece of junk.But as for me I hear him everyday on that earplugging base of his.And the mohave definitely has a high wind problem too. Not saying your wrong of course but CC doesn't have a problem with his,maybe it was modified.

Well I hate to tell you this but the coax DOES have to be the right length,
otherwise it won't reach the antenna! ;^)

Might be where you are, but the repeater trustees around here will turn the
machine off if any
of that goes on. Likewise if somebody starts acting goofy or cursing or
operating without a license.
I do have to say, too, that I am rarely on 2 Meters, so I wouldn't be able
to catch that. However, I
do know most of the repeater control ops around these parts, and they
wouldn't stand for that stuff.

On the other hand, if he only wants to talk to his mother, and a simple dipole antenna isn't sufficient, a Yagi is much smaller and easier to mount at GMRS frequencies than MURS - about 1/3 the size for equal gain. In fact, a GMRS Yagi may be a lot easier to mount than a MURS dipole, and have enough extra gain to more than make up for cable losses. So it depends on circumstances.

Well JJ or is it Sir Circumference, you have proved
nothing more than you can't hold a civil conversation.
I never called you names, but when backed into a corner
you can only throw insults, not proof.
You seem to speaking for the entire country, it's
a plague, an epidemic, my God their using the police
freqs now, whatever. You are only complaining, not
proving that is a plague of epidemic proportions, over
the entire country.

Landshark

--
If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a

"badge of morality".

Nope. Amateur Radio WAS being erroneously put down as evidenced in the
re-quoted paragraph
from "tools" below. Also Amateur Radio is more reliable as a cohesive
service, not because of regulation, but because of the discipline and
dedication of the operators themselves. My response was to that which seems
to be the "theme" of truckers who think that their "importance" justifies
their use of any radio band they choose. Somehow their hauling of goods is
supposed to make illegal activity fine and dandy. NOT!

I bought this radio one year ago. It has only been used by me as a base station, has never been in a car. I had it professionally tuned up. It has Variable PWR from .5 to 8 watts and modulates to around 30. Modulation has been tuned up as well. This is a VERY loud radio and has alot of swing. I still have the Galaxy 55 Box, mounting brackets, power cord, the original stock hand mic, manuals, and whatever else it came with. I have it all. Has the freq counter, large eas to read meter and has Bands A thru F giving you 240 channels. I promise you will not be disappointed with this Galaxy. $170 ... Thanks for looking....I also have a Northstar 3000 mobile too forsale, both in the same condition as the Galaxy 55....i'll take $145 for it....Yall take care

>It would seem that this pseudo-ham<

Jerry, is *JJ* a "pseudo-ham"?

>who is so all-fired concerned for the welfare of those "pore" old truckers has a vested interest in maintaining the status quo. <<
<

Certain nocodes ave a vested interest in intimidation, harassment, deliberate disinformation (lies) and deceit. Don't take my word for it, merely look at Aaron's lost addys...any of them. You think they were snagged for GOOD behavior, Jer? I mean, come on, you really have to f-up to have a google addy pulled....but he has managed.

>Could it be that if FCC were to aggressively quell the activity, they just *might* catch him, too? <<

"Catch him" doing exactly what?

>As to "balls", I have already confronted several managers of Flying J and Pilot Travel Centers and
pointed out that some of their wares are illegal--right in front of truckers who were at the CB counter. One of those stops is at Exit 70 on I-20 (US 321 Exit) in Columbia, SC, another one is
at Dale Earnhardt Blvd (Pilot) and I-85 near China Grove, NC. There is legal work being done at
FCC right now to hit these outlets (again) and hit 'em hard. I got that direct from Mr Hollingsworth
via phone. You can look for those companies to be fined soon, according to RH. <<

Bah! They were already fined. You mean again?

>You know, I've said this before, but your minimizing this issue,<<<

There would be no issue to minimize if it weren't maximized by some of you. Do 10 meter intruders exist? Apparently some isolated incidents occur, but even if it were at the grandiose scale you purport it to be, such as epidemic, the offenders are not here. As a matter of logic (NOT Lelnad logic), it doesn't take a rocket scientist to realize this is probably one of the least effective venues for such self-described heroics.

>your lack of understanding of the
reasons for rules and regulations, and your promotion and support of such activity will only help to
fuel the fire now being kindled to abate such intrusions.<<

That kind of sounds like...like.....like if one refuses to oppose what you speak of, then they must endorse it.

>And it will bring upon lawful CBers hardship and even more regulation than before. <<

Lawful cbers were brought grief here, regardless. Nocode hammies claiming a hate posse to reign trouble supreme in rec,radio.cb, and then going so far as to name them, and claim they will be around to carry each other's misdeeds and character assasinations when the other are not present,
is not a mere misstatement, it's a serious character flaw.

>It *could* even cause the sunsetting of CB on 27
MHZ eventually, leaving only FRS and MURS.
<<

And the actions of these nocodes could extend far past cb and right to where it began..it's rightful owners.....hammie land!!!!

>All because some people think th ey have a "right" to 'tawk on this h'yar reddio', and to do so in any band they please without regard to the legal, rightful, and assigned use of said band or frequency. NONE of us have a "right" to use a radio; it is P R I V I L E G E granted by the government predicated on the user following established rules
for the service.<<

Hey Jer, once again I point you to the pulled addys all around you, practically touching you, embracing you.

>CB operators have their 40 channels, but NO! That isn't enough. Ya just gotta have yours and everybody else's as well. Finally, something will be done about it.
J<<

I hate to break your heart again, but maybe what you don't know can't hurt you. There are many hammies on the freeband...and guess what? They are cool as all get out!!!

band.

ONLY IF THEY HAVE THE REQUIRED LICENSE! That is the issue here; the use of
10 Meters by unlicensed truckers that just buy one of those "export" radios
(illegal to import and sell)
and start talking. I hear them all the way up beyond 29 MHZ.

Now if a driver obtains the required license, he/she is more than welcome to
enjoy Amateur Radio
and all its rewards in accordance with the rules of the Service. ALL
licensed persons are welcomed and encouraged to make use of the ham bands.

One of the things that gets a LOT of negative attention is the use of AM
below 28.300 MHZ where
voice modes are not allowed in the USA/Region 2. If a driver hears Morse
Code (CW) on that
frequency, that is why. All drivers can do Amateur Radio AND their driving
friends a huge favor by passing the word that 10 Meter operations DOES
require a license and that the Feds are back in enforcement--especially
where it concerns out-of band-operation by CBers. MANY hams are
highly ticked off about the unlawful intrusions and are actively monitoring
the bands for it--even ob-
serving trucks on the highway for such goings-on. Based on their tape
recordings and tag numbers,
FCC WILL issue a warning to the driver's employer! It IS a serious matter,
folks, and you should
heed the warning.

There's no "might be" to it WRT truckers on 10 Meters. They ARE there.
Yesterday, I heard
some up as high as 28.530 on Ancient Modulation. There is NO "might be" to
it. I could make
a wave file of it, but then the next rebuttal would be "How do we know they
are on 10 Meters".
If one refuses to believe it, nothing can be done, but it still doesn't
change the fact that it is going
on. Even Riley mentioned it 3 years ago. The best proof will be when all
those letters to various
Congressional and committee persons bear fruit and those sellers and users
begin feeling the heat
of enforcement. When it begins to happen on a regular basis, then those of
us affected by such
interference can begin to laugh....truly laugh at their self-inflicted
misfortune.

I said what, Georgie-girl? You still can't quote me correctly; it's "you're", not your, dumbulb. And I was referring to Aanal Aaron H. (dumbass) Voobner, who talks a lot, never proves anything, and has always been proven wrong by anyone who actually thinks. Even YOU laughed at him when he said he was "studying for his Extra". Remember? If not, look it up; it's in the archives.

BTW, why are you afraid to use your real name and email?

> And your beef has been with truckers. Think you've changed any truckers
> minds with your crusade?

I don't have to. The emphasis has been on informing Congress of the
activities of certain
members of society who think they don't HAVE to obey the laws or fulfill
the same requirements
that others do for access to certain radio assets. The emphasis is on
cluing in the right people on how "certain" people think that they are some
kinds of "cowboy legends" who are so important to
the operation of the economy that their lawless activities will be
overlooked or that they will be bowed down to in awe of their great
achievements; after all, there are just sooooo many lawyers
that would rather drive trucks (<g>) doncha know?

All that really needs to happen is for those truckers to take their beeping
and squeaking back down
onto channel 19 where they belong. They will hear no more from any of us
hams. They can even have their Galaxy and Connex "export" reddios just so
long as they keep off the ham bands--until
they get the license, that is. And even then, voice is not supposed to be
used below 28.300 in the
US. Once that happens, the problem will be solved.

(Sigh)

An "Eagle's Claw" is a Tai Kwan Do move where the palm of the hand is
suddenly and rapidly
thrust upward into the bottom of the assailant's nose. The fingers are then
violently and quickly raked downwards over the eyes and face blinding the
attacker. If used incorrectly, it will shatter
bone/cartilege, driving same into the brain causing death. Yet, if done
correctly, the move will so
surprise the attacker with pain and blindness that he can be then taken down
with either a move against a pressure point, by a fist to the jaw, or a
tripping move. There are other holds that will
literally paralyze an attacker and cause him to go to his knees absolutely
unable to fight back.

The amp-story is not true a technologie like that neads more elektronic than a 11m-power-amp contains. It woud be more expensive than a killed BF981 RX-Fet.

The cable Story ist true.

You have to use spezific length of koax if you use Antennas like Kleber Minimax, professional koax other than 50Ohm-typ(60Ohm-hardline, 75Ohm kable-TV-hardline), 75Ohm-TV-coax(RG59), RG62 (90Ohm).

But you can use an antenna-tuner near your antenna.

> While your post is generally correct, I take issue with your point 2.

If MURS were to become overcrowed like FRS, I would of course agree,
so I don't think we have any disagreement. I was talking in terms of
the present situation (as well as the foreseeable future), in which
the lower three MURS frequencies (151.820, 151.880, 151.940) are
virtually unused in most locations.

In the present MURS situation, most activity is concentrated within
the two old business "dot frequencies"; 154.570 and 154.600.

In this particular individual's case, I think he could use one of the
lower three frequencies without the risk of too much other traffic
for, and he could lend a radio to his Mom's friend if he wished(which
you can't do with GMRS).

To be fair to GMRS, it does offer the ability to use higher
transmitter power than MURS - but, again, that will generally end up
costing you more money to go that route, and this individual seemed to
indicate he was looking for a lower cost solution.

I'm not saying GMRS won't work for this individual - it just appears
that MURS offers a simpler, cheaper, more flexible solution that
should be able to fit the individual's needs.

Actually - this would generally be the wrong way to go. Normally, you would want to put the antenna on the house on the hill - that way the person in the valley can roam around the town with a handheld unit and take advantage of the fixed "base station" antenna on the hill - always remaining in contact range with the hill station.

The only reason that you would want to go the other way around (in this particular individual's situation) is so that the mother on the hill could move around with a handheld radio, and if she fell down and couldn't get to the base station transmitter, she could use the handheld radio that she kept nearby.

It's been fun to follow the progression of statements from certain folks in here over the last few months. When confronted with the 10 meter intruder problem, they insisted (and I'm paraphrasing):

."It isn't happening"

This went on for a while until the reality of the situation forced them to concede that, yes indeed, it was happening. So they shifted to:

."OK, so it's happening, but It isn't happening often"

In short order, this too was shown to be a fallacy. There's still a few shreds of it floating around, but most have dropped it, in favor of:

."OK, so it's happening often, but no one cares"

This excuse quickly got shot down via a basic reality check. Now we're hearing:

."OK so it's happening often, hams care, but they can't do anything about it"

This too is fallacy. I believe Jerry O when he says that FCC and US officials are now getting a fair amount of complaints about this problem. I would venture a guess that they are getting more complaints now than they did, say, a year ago. And more intruders on the band will only generate more complaints. And, as many have pointed out on this group, the FCC is complaint-driven. Since the truckers don't have any legal justification for their illegal operation, they will be on the losing end of any future enforcement actions. The irony is that enforcement actions will likely be felt by the freeloader and amp-junkie community in the form of tighter restrictions on sale of illegal gear.

While you might not be able to put up rooftop antennas in either of
your situations, what you should probably consider doing is using
5/8-wave mobile antennas indoor at both sites (condo and home), and
attaching it to inexpensive handheld radios. 5/8-wave antennas are
fairly small and indiscreet, and you could get them with mag-mounts
and just put them on a small piece of metal on a dresser or other
small table.

5-8 wave mobile antenna are quite inexpensive(under $50), and offer
excellent gain. At UHF(GMRS) frequencies they are about 1.5 feet
tall, and are about 4 ft tall at VHF(MURS) frequencies. When
comparing performance of a VHF vs. a UHF solution - it turns out that
a VHF(MURS) station will significantly outperform the UHF(GMRS)
station, due to the effective aperture of the antenna(this phenomenon
is sometimes referred to as free space path loss).

In addition to the cost advantage of using handhelds vs. mobile
radios, another advantage is that you could detach your handheld from
the mobile antenna - connect a rubber duck antenna, and move about the
town, and probably still be able to communicate with your mother in
many situations(although probably not as clearly as when you were
attached to the mobile antenna in your condo). If you have a vehicle,
you might also consider keeping an antenna on it as well, and just
reconnecting your handheld to that antenna when you were driving.

OK, and Jimi Hendrix is still alive on that island in the So.Pacific.

Question: When a radio is in the transmit mode, how can you overload the front end of a receiver? When the T/R circuitry is in transmit, the receiver is out of series.

It applies to anyone the FCC is investigating.

> Hell, Lelnad, if anyone is guilty of being an "idiot" , you better
check

Liked I said above it applies to EVERYBODY, thus it applies to 10m
intruders as well.

This weekend, at the Radisson Hotel in Enfield, CT there is a Microwave Convention. There is a $25 or $40 charge, depending on whether you sign up for UHF or Microwave. There will be some seminars on Antenna Measurements Sunday. Also, some seminars on Saturday also. There will also be some "flea market" vendors related to amateur radio.

I plan on going to the seminars. Just thought to inform those that are in the area that are interested in amateur radio. You can check it out at the www.microwaveupdate.org website.

Would expect you to take that attitude twistieboy. At least the
lawyers put forth the effort to get a degree and pass the bar
exam, the no codes put forth the effort to get a license, even if
it is the entry level. As for you, you put forth no effort to
attain anything, just operate illegally.

I think MTV's "Jerky Boys" beat us to it. Supposedly, some of L.A.'s
"bad boys" of 147.435 put out an LP of some wild QSOs, and this LP is
now a rare collector's item. I remember hearing about the time
ex-WB6JAC of '435 infamy jammed a parade committee back in '81, for
which he got a year in the clink... I gather that the parade was a
fiasco, with floats going down the wrong streets, etc. [of course the
homophobic 435ers had the floats stopping in front of gay bars in WeHo
to hear them tell it...]

>
> I'd be blowing that soda through my nose at about that time...

Speaking of substances blown thru the nose, I might have actually done
a good deed by phone-jamming---got some stoned teen off dope.
Kid was laughing & joking with his buddy---"huh-huh, dude I'm so
wasted!!!" and that kind of crap... So I cut in and said, in my
Michael Ironside voice, "this is Detective Johnson of the Drug
Enforcement Agency. I'm watching you, sucker". Never heard anyone
sober up so fast in my LIFE... that kid sure cussed about it, too.
Heard his fat old mother on there a couple months later, telling some
family friend "oh, Scott was PETRIFIED of this phone before he moved
out!"
>

> LOL! Tell 'em "I'm the owner of the company dammit and I'm watching you
> from my condo window with binoculars,,,,,now quit goldbricking and stop
> yelling at the girls on the beach...."!

LOL!!! Sounds sort of like the way I used to scare teen girls when they'd piss me off... I'd tell them "come to the window". Some of the girls would turn into whimpering mush... it would never enter their heads to HANG UP.

I've been called just about every name in the book by irate callers: cochino (Spanish), demon, devil, dick, dope, faggot, fart, nigger, nitwit, pig, puto (Spanish), sonofabitch, etc. One teen girl called her friend a "stupid bitch" for asking her if she made the belching noise.

Other times, I'd just be driving past apartments along some boulevard, hear some housewife coming in, and I'd just say something like "shut up, dummy" and keep driving... poor broads never knew what hit 'em. Or, to the ones speaking in Spanish (easy find in L.A.), I'd say "eh, pendejo! Su telefono es basura! Bea comprar un telefono de novecientes megahertz! (=hey, dummy! Your phone's a piece of trash! Get a 900mhz phone!)" The V-tech company ought to give me an honorary commission for peddling so many of its phones in this manner, LOL!

BTW, I have nothing against truck drivers. My hat's off to this guy.

-Aaron-

TRUCK DRIVER WHO REPORTED SUSPECT VEHICLE SAYS HE'S NOT A HERO

(Frederick-AP) -- The truck driver who first reported the sniper suspect's vehicle to 9-1-1 says he's not a hero. In a broadcast report Ron Lantz says that he just wants people to think he did what he should have done.

Lantz says he pulled to the rest stop on westbound Interstate 70 shortly before 1 this morning -- having just heard a description of the model, make and license plate of the car.

Lantz says he radioed a truck driver behind him and said -- "That car looks kind of obvious." He says he decided to call 9-1-1. Lantz says police told him they'd be there as soon as possible, and someone else suggested he use his truck to block the entrance to the rest stop so the suspects couldn't drive out. He and another trucker blocked the entrance. About 20 minutes later, the place was swarming with FBI and police cars.

Most of the transceivers do not have a relay but use a couple of diodes to
do the switching. They are low power units rated for only a few watts. If
you feed back 100 watts or so into the transceiver while it is transmitting
it would take out the diodes and maybe other devices.

This may not be the case for long given the proliferation of cheap
GMRS/FRS hybrid radios that are being sold with the misconception that
a license is not needed.

LOL---I once did that to a nurse, who proceeded to phone 5 of her
friends to find out if they could hear it too! Of course, they
COULDN'T, and thought she was on dope stolen from the hospital...

She then handed the phone
> to her boyfriend/husband, and he "demanded" to know who was on the line.

ROFLMAO!!! I once said something to some girl which caused her to
screech "OHMIGOD!!!" So I said "it's not your god, it's MY god". She
panicked and gave the phone to her bf, who had a humorous appraisal of
the whole affair... so I told him to get a 900mhz phone to replace
that piece of junk. He just chuckled "900mhz phone? OK!" I could hear
the girl still freaking out in the background, screaming something
that sounded like "neh-neh-neh-neh".

Legal, shmeagle---as long as it's FUN! One of my neighbors turned his
cellphone into a jamming machine by pressing the channel-change button
repeatedly... he's cut in on zillions of cell calls.

> But..if you have independent trans/recever's,it could happen.

No it wouldn't because even if there were a separate transmitter and receiver the T/R relay between the two radios will only allow each to be engaged separately. When transmitting the receive side of the antenna is disengaged and out of series.....So much for the Trojan Mod. The original posting and this mod is someone's fantasy.....

No, but there would be no reason to operate illegally in order to talk to the truck behind him, would there? He could use a legal 40 channel CB radio to do that. And besides, the crucial call to 9-1-1 was made with a cell phone.

The reason I posted this was to give truckers their just due. I believe they are hard-working guys who can be counted on to "do the right thing" when the chips are down. That's why it's so important we get word to them (and their suppliers and techs) that the "10 meter radio" they bought in a truck stop must not be used illegally on the ham bands, and why it must not.

PS: I wonder if Tim will say he is a "snitch"?

Simple.

The disguised circuitry samples and stores the exciter's output frequency. When the sampled signal is compared to a list of allowable frequencies on a eprom chip, the circuitry either remains in the dormant mode or becomes destruct active. Once triggered, high voltage signal pulses are applied to the antenna line using the amplifiers own power supply. The pulse sequence only lasts a few milliseconds before the circuit slips back into sniff and search mode.

hugs and kisses,

General Johsnson Jameson

Well Jerry I went to a coffee break with some fellow radio hobbyists tonight. So on the way there I tuned in to 28.085 MHz and yup they were there all right, not loud but definitely there. Later, by a few hours, after the coffee break I again monitored 28.085 MHz, and they were still there. A different group this time, and louder. So I have to agree there're there for those who really want to take the time out to do the monitoring. And just for the record I was driving I-75 south to I-696 west, south on Southfield road to the south bound Southfield freeway, and finally to west bound I-96. I heard the bozos the whole way there at around 5 to 6 PM, and about half way back home around 9 PM.

I had an idea of another way to attack the problem Jerry. Instead of going after the so-called export-radio, or the truck drivers directly, let the Department of Transportation do the work. Since many of the 10m intruders seem to be truck drivers just have the Department of Transportation mandate that commercial trucks can ONLY have company provided GMRS UHF 2-way radios. They regulate just about everything else on the truck already so the radio is just one more minor item. The 11m antennas are hard to hide, and those small enough don't work

worth beans. Thus it would easy to spot the illegal equipment during inspections at weigh stations and when ever a cop pulls a rig over for a safety or traffic violation. The fines would be directed to the owners of the over-the-road rigs. Once the owners get stuck paying a big fine, and possibility firing the driver, or taking other corrective action, the word will get out real quick. No unauthorized radios, period. Once the truck drivers find that many of their fellow drivers are moving to GMRS radios they will not complain much about using it themselves. The point is the drivers mainly talk to each other, thus when you can move a significant number of them off of 11/10m the rest will naturally follow just so that they can still stay in contact.

A 25 watt GMRS UHF radio will work just fine with keeping in contact with fellow drivers for 5 to 10 miles up and down the highway. There is no need for the drivers to know where the local police are unless they have equipment safety violations, are overloaded, or just plain speeding. In any case if they get stopped and fined, so be it, particularly for speeding. I'm sure many of you have been passed by a big rig doing 70+ in a zone clearly marked "Trucks 55". The main use the drivers need the radio for is safety, notification of road hazards, to keep each other amused while driving long hours, and to contact the dispatcher. If the drivers don't have the discipline to use FM correctly, they sure didn't learn how to use AM either judging by all the music playing I hear on 19 all the time, them perhaps we can get rid of the radios all together, then let the drivers use cell phones instead for critical messages.

Once the truck drivers are off 11/10m the demand for the so-called export radio will drop way off, thus the job of blocking their importation will be easier. Also the word will get out to the rest of the pirates that 10m intrusions are being dealt with seriously will further discourage others from using the rigs further reducing the demand. Making an example out of the truckers is easy because they are always exposed to inspections at any time any where, i.e they can't hide at least not for long.

I supposed a bank of HV caps are also included in this super mod. Is there a new James Bond movie out that I havent seen yet?

>The pulse sequence

Pulse sequence? Sniff and search? I guess these happen right after Mr. Scott installs a new set of Dilithium Crystals in the amp eh. Sounds great, but still someone's wet dream.....

True. But both you and I assumed it was a CB radio. And if that's all you meant by your remark, my apologies.

> After all the ass
>kicking cb truckers take in here as of late,give them their dues too.

I agree and that's why I posted the story. I think I made it quite clear that I was giving them their due. In case you can't read, I'll say it again. I have nothing against truck drivers. I think they are hard-working guys that can be counted on to do the right thing when the chips are down. It's a shame they've been misled to think that operating on the 10 meter ham band is inconsequential. The word needs to get out to these guys, either via the grapevine or by an enforcement scheme such as Leland suggests.

It isn't "there" until the antenna plugs in to the ADC chip's input
pin. That's the goal of the guys doing the work if you even bothered
to read what is going on. I'm not just talking about the links quoted,
but in the various RF Design, and Communications trade publications.

Look at your point 2 again: With GMRS, you are limited to talking with
individuals in your immediate family only (or other GMRS license holders).

Are you saying my wife and I, as licensed GMRS users, are 'limited' to
talking to each other and to other licensed GMRS users? Are you saying that
MURS users being able to talk with 'anyone else with a MURS radio' is
different from the first statement and not exactly the same limitation? I'm
confused about what th' heck you're talkin' about. GMRS to GMRS and MURS to
MURS, right?

Mr Vanasse, may I call you Paul?

You see, I'm not a real General. In fact, I've never even been anywhere near the military in my whole life. Dropped out of high school when I was 15 and sold bags of pot along the streets of San Francisco back in the 60's.

I was married once but it didn't work out. My favorite color is green and I voted
for Bill Clinton twice. I've never seen an actual UFO but I have seen photographs
of pie plates hanging by fishing line tied to tree limbs. Boy did they look real.

Sure, go ahead and have a good laugh. Make fun of an old man just trying to help folks out by trying to stop senseless destruction of expensive electronic
equipment. Go ahead, poke me in the eye, I can handle it.

Sincerely,

General Johnson Jameson

Im not laughing at you General, Im laughing at this supposed modification that would cost more money than the amp itself. It would be cheaper to have an amp buyback program.

These amps are cleaverly disguised as 'export only'. Yet I saw a few of their BIG amps at Dayton being sold by 'private' parties, with no questions asked. If I were you, I'd look into this matter IMMEDIATELY! I mean....can you imagine a HAM breaking the rules and running 2500+ watts PEP? GOOD...I can't either. It's DEPLORABLE! So.... get on the horn, and turn in these OUTLAWS!
Here's the link: www.qrotec.com
After all...can you blame us lowly CB'ers for running BIG linears when in fact, our ham 'mentors' are doing the same?

The donations for this project came from a group of very
wealthy hams whom for obvious reasons wish to remain anonymous.

They have personally invested many thousands of dollars into
their " hobby " and unlike the FCC are attempting to cure a problem
that has become malignant and affects everybody.
Poorly designed, tuned and improperly used high-power amplifiers
cause havoc to government, aviation, hospital and industrial equipment.

Ask any pilot about spurious signals they have heard on their airplane
transceivers. Harmonic signals so loud they cover up tower
and plane to plane communications, making it impossible to communicate.
Imagine trying to determine where the plane is in front of you when a cb'er
running a few kilowatts decides to keyup and practice his whistling.

But hey, I'm just an old man with phony name and email address.
I'm full of crap and so are my posts. After all, it's just entertainment
right?

hugs and kisses

General Johnson Jameson

Ony one problem with this solution, for the drivers who are licensed amateur operators this would cut into their ability to enjoy the hobby. I talk to several licensed hams daily on simplex or on the local machines who are drivers, they come through here daily, one even lives here, he's an owner/operator who has 3 trucks on the road. Many of these hardworking drivers pracically live in their trucks, so by this being put into effect they would lose their ability to enjoy the hobby.

You are halfway there. Prodigy likewise won't care about
your re-definition of "spam."

Ok General, let's just say your story is true. Now if this circuitry does
work just like you say, what happens if the circuitry fails and starts
burning out radios when they are in the proper frequencies? How will
anyone know (us hams for one) how to fix this anti-freeband circuitry?

Though on the other hand hearing about a freebanders radio going up
in flames on say 27.555 MHz would be amusing. It kinda makes me
wish this wasn't just a urban myth wannabe.

That begs the question, where do truckers who are hams hang out?
I listened to 146.52 last trip to Georgia and back, never heard a peep.

What you said, in response to someone else commenting that 6146's were
used as sweep tubes, was: "Not only was the 6146 used in TV's, one can
find it in the very popular early Ampeg SVT Bass Guitar Amplifier."
Did you not make that statement? If you want to play semantics with
your own words so you can worm your way out of it, fine. Otherwise,
what TV used the 6146?

>:>: 2. What make/model amplifier is currently being manufactured in the US

>other readers see it... the question was answered and thats the end of
>that. You waste a lot of time proving your a bafoon.

Playing semantics with MY words now? Here's the original question (as if you didn't understand it's meaning): "What services between 25 and 34MHz are allowed to manufacture and market power RF amplifiers?" Now you can try and break down it's structure, but I think you know exactly what the question was asking:

You made the statement: "...I know of and have FCC licenses for services in the 26-54 Mhz range where use of an amplifier is legal. I have seen and serviced many such radio services in the past. Five minutes at the FCC web page will list such available services." Well, I have spent much more than 5 minutes on the FCC's website and I can't find one single service that permits the use of an amp between 25 and 34 MHz, nor can I find any amp currently produced that is either type-accepted or certificated for these services (which would be necessary for legal operation in those services). You have been asked many times just what service permits an amp that works between 25 and 34 MHz, and all you say is "look it up". I have, and I can't find it. For the umpteenth time, how about a link? If it's so easy to find, it shouldn't be any trouble for you to find and post the link, is it? Or maybe it is...

So how about this just to make it easier: Find one amplifier that's currently being manufactured that's type-accepted or certificated for use on any frequency between 24 and 35 MHz (I checked that while I was on the FCC site -- 2.815 specifies no amps between 24 and 35 MHz, not 25 and 34 MHz as I said before). You see, if you can find one amp that's legal for use in that bandspread, then I'll buy your story that amps on those frequencies are legal.

One or the other, it doesn't matter. Just provide some proof that there are radio services that permit amps in the band prohibited by 2.815. You know, post some PROOF -- the same stuff you keep whining that Voobner won't provide! How about it, Skippy? Or are you just full of hot air and bullshit?

>Yesterday I looked at a current FCC Radio Station Licence, Radio Service:
>IB Industrial Business and it's good label after all.

I looked and it wasn't there. IG is Industrial/Business -Conventional,
and IK is Industrial/Business -Commercial. The only other 'I' service
is "I!", which is International Bureau. You should know all this by
now, Skippy, you have several IG licenses (but no IB licenses). BTW,
what does "Offlined for Engineering Review" mean, and why are they
listed under "Charges"?

>But you work for one of them and knew that... of course...
>
